Moths of Diamondback Moth (*Plutella xylostella*) Captured in Pheromone-Baited Traps in Manitoba - 2011

Note - Pest Management decisions for diamondback moth need to be made based on counts of larvae; data from adult monitoring provides an early indication of regions where larvae may need to be monitored more intensively.

Summary: Diamondback moth was first reported this year in a trap near Carman during the week of May 2-8, then more generally during the week of May 9-15th. There was an increase in the number of moths caught in some of the traps in the eastern region from May 30th to June 26th. The Eastern and Central areas of Manitoba have the highest trap catches. Look for larvae of diamondback moth when scouting canola fields in these regions.
