

Percent of Normal Accumulated Corn Heat Units

May 01 - July 15, 2018

Based on weather data recorded from MB Agriculture Weather Program and Environment and Climate Change Canada. Climate Normal is the historical record over a 30-year period. 1971-2000 Normal data was used as the baseline for this map. Heat accumulation below 100% is considered cooler than normal and above 100% is warmer than normal.
