

Percent of Normal Accumulated Precipitation

November 01, 2017 - March 18, 2018

% Normal Precipitation

Based on weather data recorded from MB Agriculture Weather Program and Environment and Climate Change Canada. Climate Normal is the historical record over a 30-year period. 1971-2000 Normal data was used as the baseline for this map. Precipitation below 100% is considered drier than normal and above 100% is wetter than normal.
