</table>

For prophylaxis of organ rejection in adult patients receiving allogeneic kidney transplants.
As per PPI criteria (see Bulletin 50).

To be considered for benefit coverage the patient with MS must meet the following criteria:
1. Confirmed diagnosis of MS
2. Relapsing remitting MS; secondary progressive with and without relapses and primary progressive MS are excluded
3. 18 years or older
4. EDSS ≤5, excluding an EDSS determined during a disabling relapse
5. Failed treatment with adequate trial (6 months or longer) of both classes of disease-modifying therapy currently available, that is interferon-beta and Glatiramer acetate, despite adequate treatment compliance* OR contraindications/intolerance to treatment (needle phobia should not be considered “intolerance” for the purposes of approval).

Treatment failure defined as:
• 2 disabling relapses within 12 months OR
• 1 disabling relapse and MRI relapse.
The first relapse must occur at least 3 months after being on disease-modifying therapy.

New Interchangeable Categories

The following new interchangeable categories and products were added:
