## Summary

Sharing geological information benefits the Manitoba economy. This communication loop encourages academia, federal and provincial geological surveys and the mining industry. The Community Mapping Program is a crucial step toward including and involving First Nation and remote communities into

The Manitoba Geological Survey (MGS) conducted the first half of a four-week geological mapping course with the **Sayisi Dene First Nation** in **Tadoule** 

The goals of the program are to: increase awareness of the region's geology provide basic skills needed to work in a mineral exploration camp foster information-sharing between First Nation

communities and the MGS

Through the geological mapping process, MGS geologists endeavor to foster good communication and gain a clearer understanding of land-use issues that face all stakeholders.

The authors thank Tadoule Lake student-trainees G. Yassie, J.J. Jawbone, J. Thorassie and L. Bussidor for taking time to learn how the MGS conducts mapping projects and for teaching us about the Sayisi Dene people as well. The project could not have been successful without the help and support of the Chief and Council of Tadoule Lake and insightful discussions with

stone quarry for these local artists
