Guidelines For Estimating Crop Production Costs - 2024

Date: January, 2024

The following budgets are estimates of the cost of producing the most commonly grown field crops in Manitoba. General Manitoba Agriculture recommendations are assumed in using fertilizers and chemical inputs. These figures provide an economic evaluation of the crops and estimated yields required to cover all costs. Costs include labour, investment and depreciation, but do not include management costs, nor do they necessarily represent the average cost of production in Manitoba.

These budgets may be adjusted by putting in your own figures. As a producer you are encouraged to calculate your own costs of production for various crops. On each farm, costs and yields differ due to soil type, climate and agronomic practices.

This tool is available as an Excel worksheet at:

<u>The Farm Machinery Custom and Rental Rate Guide</u> determine machinery costs.

is also available to help

The <u>CropPlan Production Cost Calculator</u> is also available for producers to estimate the cash cost of producing field crops on their farm on an annual basis. CropPlan calculates marginal returns, breakeven yields, breakeven crop prices on total production and remaining unsold inventory, land and machinery cost analysis and cash based financial ratios.

The fertilizer recommendation will vary depending on the soil type, climate and crop rotation. It is recommended that soil test sampling and analysis be conducted each year to produce a better baseline for fertility. It costs \$1.00 to \$2.00/acre for custom sampling and analysis. * *

For more information on fertilizer rates and recommendations -Fertilizer Cost & Efficiency

 Note: phosphorus amounts are allotted to each crop in the above examples. Sometimes this amount may not be practical or safe to apply with the seed of some crops like soybean or canola. Options for meeting these needs and phosphorus balance through the rotation are provided at: Phosphorus Balance Calculator

Other Assumptions

Fuel Costs: Includes fuel used for field work, trucking in inputs and trucking out production.

Machinery Operating Costs: Includes costs for maintenance, repairs, licenses and insurance, based on 4.2% of machinery investment cost.

Crop Insurance: (2023 rates)

80% Insured Value coverage, \$100/acre excess moisture Insurance, and additional hail insurance at \$400/acre coverage for all crops. Coverage and costs based on MASC Risk Areas #2, 5, 6, and 12.

Other Costs: Includes overhead expenses - hydro, telephone, accounting, buildings, supplies and insurance, etc.

Land Taxes: The average cost based on land tax assessment and mill rates of a sample of municipalities growing crops less provincial tax rebate.

Drying Costs: Budget allocates costs only for corn and sunflowers. However, drying costs may be incurred in some years for the other crops.

Interest On Operating: Interest charges on operating costs are calculated at 9% for six months.

Land Cost:

Based on approximate average land values. Budget assumed 12% financed at 8% for 25 years, plus 1.5% land equity opportunity cost. Budget can be used to estimate cashflow by removing investment cost.

P&I Cost (based on \$1,245,000 Mortgage) = \$116,630 payments per year) / 2500 acres = \$46.65/acre)

Investment = (Total Investment x Owned Equity %) x Investment Rate % (eg. ((\$4,150 x 88%) x 1.5%) = \$54.78/acre)

Machinery Cost:

Based on approximate average machinery values. Budget assumed 40% financed at 8.5% for 7 years, depreciation costs over 15 years with a 25% residual value, plus 1.5% machinery equity opportunity cost. Budget can be used to estimate cashflow by removing depreciation and investment cost.

P&I Cost (based on 650,000 + 145,000 Loans) = 126,990 + 228,329 payments per year) / 2500 acres = 50.80 and 11.33/acre) Depreciation (Useage Cost) = (Total Investment - Residual Value) / Years Useful Life (eg. ($650 - (650 \times 25\%)$) / 15 = 32.50/acre) Investment = (Total Investment x Owned Equity %) x Investment Rate % (eg. ($650 \times 60\%$) x 1.5%) = 5.85/acre)

Depreciation Cost = Original Cost - Salvage Value

Useful Life

Investment Cost = Original Cost + Salvage Value x Investment Rate

Estimated Farmgate Values:

Target crop prices are based on deferred delivery contract prices for fall 2023. Target yields are estimated based on 5 year MASC average yields.

Storage Cost:

Storage costs for each crop are based on estimated yields entered on the Summary page.

Budget assumed 60% financed at 8% for 20 years.

Farm storage requirements were assumed to cost \$3.50/bushel for 15% of the storage, \$4.50/bushel for 70% aerated storage and \$5.50/bushel for 15% hopper storage.

Profitability, Breakeven & Risk Analysis Formulas:

Gross Revenue = Price per unit x Yield per acre (eg. wheat: \$9.25/bu x 65bu/ac = \$601.25/ac)

Net Profit = Gross Revenue - Total Cost (eg. wheat: \$601.25 gross revenue - \$606.04 total cost = \$-4.79 per acre)

Operating Expense Ratio = (Operating Cost / Gross Revenue) x 100 (eg. wheat: \$388.46 operating expense / \$606.04 total cost = 64.6%)

\$ Revenue Per \$ Cost = Gross Revenue / Total Cost (eg. wheat: \$601.25 gross revenue / \$606.04 total cost = \$0.99)

Return on Investment (ROI) = (Gross Revenue - Total Cost) / Total Cost (eg. wheat: (\$601.25 gross revenue-\$606.04 total cost) /\$606.04 total cost = -0.8%) Estimated Return on Asset (ROA) = (Margin Over Operating - Labour - Machinery Depreciation) / (Land Investment Cost + Machinery Investment Cost) (eg. wheat: (\$212.79 margin - \$5.40 labour - \$32.50 dep.) / (\$4150 land cost + \$650.00 conv. machinery + \$145.00 special crop. mach.) = 3.10%)

Breakeven Price = Cost / Target Yield (eg. wheat cost \$606.04 / 65 bu = \$9.32 per bu)

Breakeven Yield = Cost / Target Price per Unit (eg. wheat cost \$606.04 / \$9.25 bu = 65.5 bu)

Breakeven Yield Risk Ratio = (Target Yield per Acre / Breakeven Yield) x 100 (eg. wheat yield 65 bu/ac / 65.5 bu BE = 99 %)

Agrilnsurance Risk Ratio = (Agrilnsurance Coverage / Operating Cost) x 100 (eg. wheat coverage \$585.73/ac / \$388.46 operating expense = 151 %)
