

# Guidelines for Estimating On-Farm Wind Energy Production Costs 2012

### Guidelines For Estimating On-Farm Wind Energy Production Costs

Based on 3.5 kW wind turbine

Date: November	. 2012
----------------	--------

This guide is designed to provide you with planning information and a format for calculating costs of production for on-farm wind power production. Sale of electricty excess power beyond consumption are not included. Adjustments will be necessary when applying these figures to your own enterprise.

The budget estimates are based on a number of assumptions which are clearly defined in the supporting pages. Input costs are based on industry information. Proper equipment management in the production process and compliance to all applicable environmental requirements is assumed.

**Disclaimer**: This budget is only a guide and is not intended as an in depth study of the cost of production of the Manitoba wind power industry. Interpretation and utilization of this information is the responsibility of the user. If you require assistance with developing your individual budget, please contact your local MAFRI Business Development Specialist.

**On-Farm 3.5 kW Wind Turbine Production Costs** 

November, 2012

Based on a \$30000 total capital	cost & \$0.06	94 KWHr	Manitoba Hyd	dro rate	
A. Energy Produced - estimated range     1.01 Total Annual Electricity Produced     Capacity Factor	Minimum 4,273 13.94%	kWHr	Maximum 10,682 34.84%	kWHr	
1.02 Cost / installed kW - net power output			\$24,602

<sup>1.</sup> Based on Hydro rate @ \$0.0694 per kWh plus PST & GST.

**Disclaimer:** This budget is only a guide and is not intended as an in-depth study of the cost of production of this industry. Interpretation and utilization of this information is the responsibility of the user. No liability for decisions based on this publication is assumed.

<sup>2.</sup> Based on 20 year average Hydro rate @ \$0.096 per kWh plus PST & GST.

#### **Wind Energy Production Costs - Input**

#### **Assumptions**

- 1. This budget outlines the cost of production for on-farm wind electricty generation operation.
- 2. Buildings and equipment are valued at new cost.
- 3. Capacity factor is based on Canadian Wind Atlas 90 foot turbine formula.
- 4. Minimum production based on actual vs. predicted kWHr production case studies.
- 5. Annual kWHr production could vary from significantly from minimum or maximum estimates due to decreased turbine height, local site factors, or relative turbine efficiency.
- 6. All electricity produced is for farm use only.

#### **Wind Power Production**

Wind turbine size - kilowatts (kW)	3.5	
Max. Capacity factor - Cdn Wind Atlas 90 ft formu	34.84	%
Min. 'Realized' Capacity Factor (% of maximum)	40	%
Days per year	365	
Hours operation per day	24	
Capital incentive or grant	<b>\$0</b>	
MB Hydro residential rate	\$0.0694	/ kWhr
Manitoba Sales Tax on Hydro	1.4	%
Federal GST Tax	5.0	%
Estimated Hydro rate annual inflation	2.9	%

#### **Other Operating Costs**

onio opolaniig ocolo	
Maintenance	<b>0.25</b> %
Labour Rate	<b>\$17.50</b> / hour
Hours inspection per week	0.00
Misc. Administration or fees	<b>\$0</b> / year
Insurance	0.5 %
Property taxes	0.0 %
Investment Rate	2.50 %
Operating Interest Rate	<b>5.50</b> %
Expected Turbine Lifespan	20 years

Expected Turbine Lifespan

Desired Simple Payback

20 years

10 years

#### **Capital Costs**

Capital Costs			
Buildings	Original Value	Salvage Value	Useful Life
Tower	\$6,000	<b>30</b> %	30 years
Tower installation	<u>\$2,500</u>	<u>30</u> %	30 years
Total	\$8,500	30.0 %	<b>30.0</b> years
Machinery & Equipment			
Wind turbine	\$20,000	<b>10</b> %	20 years
Bidirectional Hydro meter	\$200	<b>10</b> %	20 years
Grid tie electrical panel (installatio	r <b>\$1,300</b>	<u>10</u> %	20 years
Capital grant or incentive	<u>\$0</u>		
Total	\$21,500	10.0 %	<b>20.0</b> years
Total Bldg., Mach. & Equip	\$30,000		
Total Land Value	<b>\$0</b>		
Total Capital Investment	\$30.000		

#### **Assumptions**

#### **Assumptions**

- 1. This budget outlines the cost of production for on-farm wind electricty generation operation.
- 2. Buildings and equipment are valued at new cost.
- 3. Capacity factor is based on Canadian Wind Atlas 90 foot turbine formula.
- 4. Minimum production based on actual vs. predicted kWHr production case studies.
- 5. Annual kWHr production could vary from significantly from minimum or maximum estimates due to decreased turbine height, local site factors, or relative turbine efficiency.
- 6. All electricity produced is for farm use only.
