Artificial Intelligence's Growing Role in Food and Beverage Processing

It's an exciting time for Canada's F&B processors. Long plagued by crippling labour shortages – and now facing tariff uncertainties and a faltering economy – food companies are turning to artificial intelligence (AI) for deepened automation, data analysis and actionable insights. In concert with machine vision and other sensor systems, AI technologies are now making various aspects of food production much more efficient, with further gains to come.

Trade Matters: How India is Redefining Opportunity

With a population of almost 1.5 billion and an economy valued at around US\$4 trillion, India has quickly

ascended into the ranks of the world's five largest economies. As the world's fastest-growing major economy over the last few years, India has averaged 5.8% annual GDP growth since 2016, outstripping BRICS peers Brazil, Russia, China and South Africa.

DID YOU KNOW?

Peak of the Market Donates Produce

During the 2025 CFL season, Peak of the Market donated 111,827 pounds of produce to families experiencing food insecurity through the Purolator Tackle Hunger campaign.

As part of the campaign, fans attending Winnipeg Blue Bombers home games were invited to donate cash or non-perishables. Peak of the Market then matched all food donations by weight and provided two pounds of produce for every dollar donated.

Your Supply Chain – More than Just Transportation

When we think about our supply chains, we often think only of the distribution and transportation of goods, particularly when moving freight can be inefficient and expensive. There are, however, key components to your supply chain beyond transportation:

1. Procurement & Sourcing

- Finding and managing reliable suppliers (and alternate/backup suppliers) for inputs and raw materials.
- Negotiating supplier contracts and ensuring compliance with standards.

2. Production & Manufacturing

- Converting raw materials into finished goods while managing capacity, quality control, and efficiency.

3. Inventory Management

- Using forecasting tools to manage inventory levels in order to meet demand without overstocking.

4. Warehousing & Storage

- Safe and efficient storage of finished goods before distribution.

5. Information Flow & Technology

- Data sharing between suppliers, manufacturers, and retailers.
- Use of ERP systems, blockchain, and AI for visibility and traceability.

6. Risk Management

- Anticipating and addressing disruptions (e.g., geopolitical, climate, or supply shortages).

7. Sustainability

- Ensuring ethical sourcing and reducing environmental impact and waste.

8. Customer Service

- Maintaining customer satisfaction and brand reputation.

In short, transportation is just one link in a much larger chain that involves planning, coordination, and continuous improvement. More supply chain events and resources coming soon!

We recognize that Manitoba is on the Treaty Territories and ancestral lands of the Anishinaabe, Anishininewuk, Dakota Oyate, Denesuline and Nehethowuk peoples. We acknowledge Manitoba is located on the Homeland of the Red River Métis. We acknowledge northern Manitoba includes lands that were, and are, the ancestral lands of the Inuit. We respect the spirit and intent of Treaties and Treaty Making and remain committed to working in partnership with First Nations, Inuit, and Métis people in the spirit of truth, reconciliation and collaboration.
