

Estimates of Field Crop Production 2025

- The 2025 season was strong overall, with many crops setting new yield and production records despite the generally dry and smoky summer. The spring began with promising planting conditions, as many producers were able to start planting early and progress quickly. During the growing season, most of the province experienced below-average rainfall, and many areas faced additional challenges due to wildfire outbreaks. The late season was warmer than normal, however also brought above-average rainfall, creating challenging field conditions while providing ample moisture for seeding fall rye and winter wheat.
- Canola recovered from the poor season seen in 2024. Harvested area was down nine per cent to 3.01 million acres; however, production increased by 2.4 per cent to 3.06 million tonnes. Yields averaged 44.8 bushels per acre, up 11 per cent from last year, breaking the previous record of 44.6 bushels per acre set in 2023. Manitoba produced 14 per cent of Canada's canola in 2025.
- Manitoba reported total wheat production of 5.86 million tonnes, up slightly from last year's 5.74 million tonnes. The record-setting yields of 2024 held strong into 2025, with an average yield of 65.6 bushels per acre. Harvested area was up two per cent. Manitoba's production represented 14.7 per cent of total Canadian wheat production for 2025.
- Seeded and harvested acres for soybeans recovered from the wet conditions experienced in 2024, with a 16 per cent increase in both. Yields were slightly lower than last year, with a three per cent decrease to 42.6 bushels per acre. Total production rose by 12 per cent to 1.9 million tonnes, the highest since 2018. Manitoba accounted for 28 per cent of Canada's total soybean output for 2025.
- Grain corn enjoyed another very strong year in 2025, beating last year's production record. Total production was up 22 per cent at 2.16 million tonnes. Yields were the highest seen in the last ten years at 147 bushels per acre, up five per cent compared to 2024. Seeded area increased by 23 per cent, however, harvested area was six per cent lower than seeded area, likely due to the wet conditions late in the growing season.
- Oat production remained strong, with a slight two per cent increase from 2024. Harvested area was up five per cent to 531,000 acres. This year's yield was down two per cent from last year's record, dropping from 119.4 to 116.5 bushels per acre. Manitoba produced 24.3 per cent of Canada's oat production in 2025.
- Barley production reached 534,774 tonnes, up four per cent from last year but down from 665,000 tonnes in 2023. Although harvested area was down four per cent compared to 2024, yields were exceptionally strong at 85 bushels per acre, the highest seen in the last ten years.
- Manitoba reported outstanding rye production in 2025 at 312,281 tonnes, up 200 per cent from 2024. Harvested area was up 176 per cent to 158,100 from 57,200 acres. Yields were the highest seen in the last ten years at 77.7 bushels per acre, up 11 per cent from 2024. Manitoba produced 45.7 per cent of Canada's rye production in 2025.
- Harvested area of dry peas rose slightly by three per cent in 2025 compared to 2024, and yields remained steady at 51.3 bushels per acre. Total production was up four per cent from 2024 to 271,244 metric tonnes, setting a new record compared to the previous high of 255,507 metric tonnes in 2022.
