Registration Data Report

Association of Manitoba Land Surveyors

Introduction

The Fair Registration Practices Office's (FRPO) registration data report on the Association of Manitoba Land Surveyors (AMLS) is issued as a matter of FRPO's responsibility under section 14(2b) of The Fair Registration Practices in Regulated Professions Act (act) to conduct research and analysis regarding the registration of internationally educated applicants (IEAs).

This report is restricted to developing a fact-based, statistical picture. There is no discussion of fairness issues or compliance to fairness duties under the act.

Manitoba self-regulated professions supply registration data to the FRPO in accordance with section 15(2) of the act. Each year, regulated professions subject to the legislation provide records on the key steps in the assessment and registration process for IEAs, and less detailed, aggregate application and outcome information for domestic applicants (DAs).

Reading the numbers

AMLS received very few IEAs, less than five, over the 2012 to 2025 reporting period. No registrations have been reported.

This data includes only IEAs who completed the national first-step assessment, conducted by the Canadian Board of Examiners for Professional Surveyors (CBEPS), and then went on to apply to AMLS. Manitoba IEAs unsuccessful with the first-step national assessment will not apply to AMLS and are not tracked in the data. This means only a partial picture of IEA applications and outcomes is presented. The true number of applications from Manitoba IEAs may be undercounted.

Manitoba does not have an education program in geomatics. Only a handful of educational institutions in Canada provide the training required for full academic qualification with CBEPS needed to apply to AMLS. It is not uncommon for individuals receiving their geomatics education in other provinces to settle outside Manitoba and to not return. This may account for the low number of applicants to the profession over the period.

A cautious reading of the data is needed. Registration outcomes and timelines statistics reflect both the profession's registration requirements and individual circumstance. Often people take an extended period to register or abandon the process for reasons unrelated to registration requirements. This can have a significant impact on registration outcome and timeline data.

In this report, only basic application and outcome data is presented as privacy concerns with small application numbers do not permit publishing a more detailed analysis.
