CAUTION: Be prepared to secure the airway at any time

Ensure airway & oxygenation
Exclude hypoglycemia

Seizure resolves within 2 minutes

Administer antipyretic

Yes

TRANSPORT

No

Return to SEIZURE - INFANT
**INDICATIONS:**

- Single generalized seizure
- Duration less than 2 minutes
- Documented temperature great than 38 degrees or history of recent fever

**CONTRAINDICATIONS:**

- None

**NOTES:**

- Febrile seizures are usually brief and self-limited, do not recur, and rarely require administration of any anticonvulsant medications.
- Be aware of the potential for airway compromise, hypoventilation or apnea and desaturation after any seizures. At all times be prepared to support ventilation and oxygenation and secure the airway.
