EXCEPTION DRUG STATUS (EDS)

Certain drugs or other items are approved for coverage under the Exception Drug Status (EDS) Program when they meet specific criteria and upon review and recommendation of the Manitoba Drug Standards and Therapeutics Committee (MDSTC). The drugs or other items usually fall into one of the following categories:

- The drug or other item is ordinarily administered only to an in-patient of a hospital but is being administered outside of a hospital because of exceptional circumstances.
- The drug or other item is not ordinarily prescribed or administered in Manitoba, but is being prescribed because it is required in the treatment of a patient who has an illness, disability, or condition rarely found in Manitoba.
- Evidence, including therapeutic and economic evidence, provided to the minister in accordance with the criteria established by the minister, supports a specific treatment regime that includes use of the drug or other item.

Over-the-counter (OTC) products are generally not included as benefits of the Drug Plan. Exception Drug Status is not granted for appetite suppressants, drugs for the treatment of erectile dysfunction and vaccines normally provided by Public Health.

When an EDS drug is approved as a benefit, the cost will be covered through the Pharmacare Program during the time period authorized by the EDS Program and after the client’s Pharmacare deductible has been met.

Effective October 18, 2021, “Part 3 Exception Drug Status” or “Part 3 benefits” will be referred to as “Exception Drug Status” or “EDS benefits”.

CHANGES TO APPROVAL PROCESS AND EXPIRY DATES - EFFECTIVE OCTOBER 2017

Effective October 1, 2017 many drugs will no longer require EDS renewal for coverage under Manitoba's Provincial Drug Programs (PDP) and the Employment and Income Assistance Drug Program (EIA). All EDS drugs will still require initial approval, but for many drugs, if coverage approval is granted, this approval will be indefinite and prescribers will no longer need to reapply for extending or renewing this coverage. Any patient that has an active EDS approval (as of October 1, 2017) for any of the drugs affected by this change will automatically have the approval extended indefinitely. This change will affect only products identified on the List of Designated Drugs and may be updated from time to time. Details can be found online at: https://www.gov.mb.ca/health/pharmacare/healthprofessionals.html

INFORMATION REQUIRED WHEN MAKING A REQUEST FOR COVERAGE:

- Prescriber Information - Name (including first initial), Address, Phone Number and Prescriber Number.
- Client Information - Client Name, Address, Manitoba Health Registration Number (MHRN), Personal Health Identification Number (PHIN) and Date of Birth.
- Drug Information - Drug Name (trade and/or generic name), Dosage Form, Strength, Expected Dosing and Expected Therapy Duration.
- Justification - Diagnosis and/or Indications for Use.

EDS request forms are now available online, please visit: http://www.gov.mb.ca/health/pharmacare/healthprofessionals.html#b
NOTES REGARDING THE EXCEPTION DRUG STATUS (EDS) PROGRAM:

• Duly licensed practitioners prescribing within their scope of practice may apply for EDS.
• Requests can be submitted by mail or by fax. The fax number is (204) 942-2030 or 1-877-208-3588. These numbers are for health professionals only.
• To ensure eligible benefit coverage, approval must take place prior to purchase or dispensing of a prescription drug. Retroactive coverage is not provided, no exceptions.
• EDS requests are prioritized by date received and the urgency of the request.
• To ensure continuity of coverage, requests for renewal should be forwarded prior to the expiry date. Please allow at least one to two business days.
• Urgent requests received during regular business hours will usually be processed within 24 hours.
• Patients are notified by letter if a request for coverage has been approved or denied.
• If a drug is approved for coverage under EDS, coverage is valid from the date of application to date of expiration.
• If denied, payment for the medication is the responsibility of the patient.
• For NEW requests - If a client meets EDS criteria for one of the products identified in the List of Designated Drugs with Indefinite EDS Approval, benefit coverage will be granted indefinitely. The client will receive an initial approval letter which confirms indefinite EDS approval.
• For RENEWAL requests - If a client has an active EDS approval for a product identified in the List of Designated Drugs with Indefinite EDS Approval – as of October 1, 2017, this coverage will be grandfathered indefinitely; no renewal will be required. The client will not be sent a letter to confirm their continued EDS approval.
• If the request for benefit coverage is not approved, payment for the medication is the responsibility of the patient.

NOTE: Not all medications currently available on the market in Canada are benefits under the Manitoba Drug Benefits Formulary or under the EDS Program.

NOTE: Some private and extended health insurance providers require their clients to have the EDS approval before they agree to cover any part of the prescription cost. It is the clients’ responsibility to contact their private drug plan directly for further information.

PRODUCT SELECTION:

In September 2001, F/P/T Health Ministers agreed to establish a single Common Drug Review (CDR) for new drugs (chemical entities) submitted in Canada for coverage by F/P/T drug plans. Beginning September 2003, all new drugs are reviewed nationally through the CDR process, with expert advice and recommendations being provided by the Canadian Agency for Drugs and Technologies in Health (CADTH). The recommendations of CADTH are taken into consideration by each jurisdiction when making a listing decision.

CADTH recommendations are taken into account by the Manitoba Drug Standards and Therapeutics Committee who makes recommendations to the Minister of Health on drug products to be considered for benefit under the Pharmacare Drug Benefit Program.

Committee members provide recommendations on drug interchangeability and on the therapeutic and economic value of drug benefits.

For more information on the Manitoba Drug Formulary Review Process, please visit:
http://www.gov.mb.ca/health/mdbf/review.html

For more information on the Manitoba Drug Benefits Formulary and the Manitoba Drug Interchangeability Formulary:
http://www.gov.mb.ca/health/mdbf/
PROVINCIAL DRUG PROGRAMS REVIEW PROCESS (SPECIAL CIRCUMSTANCES):

Should a prescriber wish to obtain EDS status for a drug not normally eligible for EDS status, the prescriber may apply in writing and include the information listed below.

Please address request to:

Provincial Drug Programs Review Committee
300 Carlton Street – Room 1070
Winnipeg MB  R3B 3M9
Fax (204) 942-2030 or 1-877-208-3588

Please include all of the information required for an EDS request (see page 1) as well as:
• Information and background on the original EDS request.
• Previous therapies tried and response to those therapies.
• Additional Information such as supporting literature to support the review.

CRITERIA:

Following are the criteria for coverage of common drugs requested under Exception Drug Status. Further information can be provided by professional staff at the Exception Drug Status program.

ANTIHYPERTENSIVE/ANTILIPIDEMIC DRUGS

**Confirmed diagnosis of Alzheimer's Disease** with DSMIV criteria with:
(a) Memory impairment (impaired ability to learn new information or to recall previously learned information); plus
(b) at least one of the following:
- Aphasia; problems with language (receptive and expressive)
- Apraxia; impaired ability to carry out motor activities despite intact motor function
- Agnosia; failure of recognition - especially people
- Disturbance in executive functioning

The above deficits must have:
- Caused significant decline in previous levels; and
- A gradual onset and continued cognitive decline; and
- The absence of other causative conditions; and
- The deficits do not occur exclusively during the course of delirium; and
- Normal test results for all of the following values: CBC, TSH, Electrolytes, Vitamin B12, and Glucose; and
- The initial MMSE score must be between 10 and 26 and measured within 30 days of the application.

| 02474522 | Trelegy Ellipta | fluticasone furoate/umeclidinium/vilanterol | 100 mcg/62.5 mcg/25 mcg | Powder for Inhalation |

For the long-term, once daily, maintenance treatment of COPD, including chronic bronchitis and/or emphysema according to the following:
- Patients should not be started on triple inhaled therapy as initial therapy for COPD
- For use in patients who are not controlled on optimal dual inhaled therapy for COPD

Please contact the EDS Program at Manitoba Health for specific criteria.

Inclunox, Inclunox HP, Redesca or Redesca HP will be the preferred enoxaparin option for all enoxaparin-naïve patients prescribed enoxaparin. Preferred means the first enoxaparin product to be considered for reimbursement for enoxaparin-naïve patients. Patients will not be permitted to switch from Lovenox, Inclunox, Inclunox HP, Redesca or Redesca HP to another enoxaparin product or vice versa, if previously trialed and deemed unresponsive to therapy.

For the long-term treatment of osteoarthritis or rheumatoid arthritis in patients who have one or more of the following risk factors:
- Previous peptic ulcer, gastrointestinal bleeding, gastric outlet obstruction (endoscopy or radiographic evidence);
- Elderly (more than 65 years of age);
- Concurrent warfarin therapies;
- Bleeding disorders;
- Concurrent prednisone therapy at doses greater than 5 mg/day for more than 2 weeks; OR
- Where at least 3 NSAID's have been tried and failed or were not tolerated.
Also may approve for ankylosing spondylitis, gout, pseudo-gout, lupus or psoriatic arthritis.

NOTE: If a patient is receiving a proton pump inhibitor (PPI) for reflux disease, COX II inhibitors are not warranted for additional protection.

For the treatment of:
(a) **Palliative and chronic pain** in patients where hepatotoxicity is a concern due to high doses of acetaminophen (e.g. taking over 12 tablets of acetaminophen compound with codeine 30 mg per day).
(b) **Codeine addiction** using tapering doses.

Patients who have tried the combination products (e.g. Percocet) and have maximized the acetaminophen dose or have contraindications to acetaminophen.

For the diagnosis of:
1. **Cancer related pain; PLUS**
   Patients who are unable to tolerate or receive an adequate response to either the regular release dosage forms of oxycodone or the sustained release preparations of morphine or hydromorphone; OR
2. **Pain management in a specified chronic pain diagnosis** (details regarding patient's condition and previous medication history are required); PLUS
   Patients who are unable to tolerate or receive an adequate response to either the regular release dosage forms of oxycodone or the sustained release preparations of morphine or hydromorphone.

As an adjunct to diet, exercise, and standard care therapy to reduce the incidence of cardiovascular (CV) death in patients with type 2 diabetes mellitus (T2DM) and established cardiovascular disease who have inadequate glycemic control, if the following criteria are met:
- Patients have inadequate glycemic control despite an adequate trial of metformin
- Patients have established cardiovascular disease as defined* in the EMPA-REG OUTCOME trial.

*NOTE*: Established CV disease is defined on the basis of one of the following:
- History of myocardial infarction (MI).
- Multi-vessel coronary artery disease in two or more major coronary arteries (irrespective of revascularization status).
- Single-vessel coronary artery disease with significant stenosis and either a positive non-invasive stress test or discharged from hospital with a documented diagnosis of unstable angina within 12 months prior to selection.
- Last episode of unstable angina > 2 months prior with confirmed evidence of coronary multi-vessel or single-vessel disease.
- History of ischemic or hemorrhagic stroke.
- Occlusive peripheral artery disease.

For the treatment of type 2 diabetes in combination with metformin and a sulfonylurea, when diet and exercise plus dual therapy with metformin and a sulfonylurea do not achieve adequate glycemic control.

Updated: January 25, 2022
Adlyxine
lixisenatide
10 mcg
20 mcg
Injection
For treatment of type 2 diabetes in combination with a basal insulin with or without metformin in patients who have been uncontrolled on, or are intolerant to, a sulfonylurea and metformin.

Soliqua
insulin glargine/lixisenatide
100 U/33 mcg
Injection
For treatment of patients with type 2 diabetes who would be eligible for Adlyxine but will also be treated with a basal insulin (less than 60U/day) to achieve adequate glycemic control.

MISCELLANEOUS SKIN AND MUCOUS MEMBRANE AGENTS

Protopic
tacrolimus
0.1%
0.03%
Ointment
Second-line therapy for short and long-term intermittent-treatment of moderate to severe atopic dermatitis in non-immunocompromised patients, in whom the use of conventional topical corticosteroid therapies are deemed inadvisable because of potential risks, or who are not adequately responsive to or intolerant of conventional therapies.

Note: Both 0.03% and 0.1% for adults and only 0.03% for children aged 2 to 15 years.

Dupixent
dupilumab
150 mg/mL
200 mg/1.14 mL
150 mg/mL
Injection
For the treatment of atopic dermatitis only if the following conditions are met;

Initiation Criteria
• Patients aged 12 years and older with moderate-to-severe atopic dermatitis whose disease is not adequately controlled with topical prescription therapies or when those therapies are not advisable.
• Patients must have had an adequate trial or be ineligible for each of the following therapies: phototherapy (where available), methotrexate, and cyclosporine.
• Patients who have had an adequate trial of phototherapy, methotrexate, and/or cyclosporine must have documented refractory disease or intolerance.
• The physician must provide the Eczema Area and Severity Index (EASI) score and Physician Global Assessment score at the time of initial request for reimbursement.
• The maximum duration of initial authorization is six months.

Renewal Criteria
• The physician must provide proof of beneficial clinical effect when requesting continuation of reimbursement, defined as a 75% or greater improvement from baseline in the EASI score (EASI-75) six months after treatment initiation.
• The physician must provide proof of maintenance of EASI-75 response from baseline every six months for subsequent authorizations.

Prescribing Conditions
• The patient must be under the care of a dermatologist.
• Dupilumab is not to be used in combination with phototherapy or immunosuppressant drugs, such as methotrexate or cyclosporine.

To increase bone mass in men or postmenopausal women with osteoporosis who are at a high risk for fracture or who have failed or are intolerant to other available osteoporosis therapy, where the following clinical criteria are met:

- High fracture risk defined as either:
  - moderate 10-year fracture risk (10% to 20%) as defined by either the Canadian Association of Radiologists and Osteoporosis Canada (CAROC) tool or the World Health Organization's Fracture Risk Assessment (FRAX) tool with a prior fragility fracture;
  - high 10-year fracture risk (≥ 20%) as defined by either the Canadian Association of Radiologists and Osteoporosis Canada (CAROC) tool or the World Health Organization's Fracture Risk Assessment (FRAX) tool.

**Notes:**
- Bisphosphonate failure will be defined as a fragility fracture and/or evidence of a decline in bone mineral density below pre-treatment baseline levels, despite adherence for one year.
- Contraindication to oral bisphosphonates will be considered. Contraindications include renal impairment, hypersensitivity, and abnormalities of the esophagus (e.g. esophageal stricture or achalasia).

1. Paget's disease.
2. a) For female patients with post-menopausal osteoporosis (PMO) at high risk for fracture and satisfy at least two of the following three criteria:
   (i) Age > 75 years;
   (ii) A prior fragility fracture;
   (iii) A bone mineral density (BMD) T-score ≤ -2.5; OR
   b) Female patients with PMO with a serious intolerance to oral bisphosphonates or for whom oral bisphosphonates are contraindicated.

**Crohn's Disease**
For treatment of moderate to severely active Crohn's Disease in patients with inadequate responsive, intolerance or contraindications to an adequate course of corticosteroids AND an immunosuppresssive agent.

*Request for coverage must be made by a specialist in gastroenterology.*

**Fistulizing Crohn's Disease**
For the treatment of Fistulizing Crohn's Disease in patients with actively draining perianal or enterocutaneous fistula who meet the following criteria:
- Presence of fistula that has persisted despite a course of antibiotic therapy (e.g. ciprofloxacin and/or metronidazole) AND
- Have had inadequate response, intolerance or contraindications to an immunosuppressive agent (e.g. azathioprine or 6 mercaptopurine).

*Request for coverage must be made by a specialist in gastroenterology.*
**Ulcerative Colitis**
For the treatment of patients over 18 years of age with moderate to severely active ulcerative colitis who have had inadequate response, intolerance or contraindications to conventional therapy including 5-aminosalicylate compounds AND corticosteroids.

*Request for coverage must be made by a specialist in gastroenterology.*

</thead>
</table>

Avsola will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Rheumatoid Arthritis, Ankylosing Spondylitis, Crohn’s Disease, Ulcerative Colitis, Psoriatic Arthritis, and Psoriasis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients.

**Rheumatoid Arthritis**
For the treatment of patients over 18 years of age who have moderate to severe active rheumatoid arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARDS must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

*Request for coverage must be made by a specialist in rheumatology.*

Avsola will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Rheumatoid Arthritis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Avsola to another infliximab product or vice versa, if previously trialed and deemed unresponsive to infliximab.

**Ankylosing Spondylitis**
For the treatment of patients with active ankylosing spondylitis who have failed to respond to an adequate trial of at least three different non-steroidal anti-inflammatory drugs (NSAIDs) and, in patients with peripheral joint involvement, have failed to respond to methotrexate or sulfasalazine.

*Request for coverage must be made by a specialist in rheumatology.*

Avsola will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Ankylosing Spondylitis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Avsola to another infliximab product or vice versa, if previously trialed and deemed unresponsive to infliximab.
Psoriatic Arthritis
For treatment of patients over 18 years of age who have active psoriatic arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindication to these agents is documented. One combination therapy of DMARDs must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.

Avsola will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Psoriatic Arthritis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Avsola to another infliximab product or vice versa, if previously trialed and deemed unresponsive to infliximab.

Psoriasis
For the treatment of adult patients with severe plaque psoriasis with one or more of the following:
● Psoriasis Area and Severity Index (PASI) ≥10;
● Body Surface Area (BSA) > 10 percent;
● Dermatology Life Quality Index (DLQI) > 10;
● Significant involvement of the face, hands, feet or genital region; AND
● Failure to respond to, contraindications to, intolerant of or unable to access methotrexate, cyclosporine and/or phototherapy.

The initial request is approved for a maximum of 4 months. For continued coverage the physician must confirm the patient’s response to treatment and demonstration of treatment clinical benefits:
● ≥ 50 percent reduction in the PASI score with ≥ 5 point improvement in the DLQI; OR
● ≥ 75 percent reduction in the PASI score; OR
● ≥ 50 percent reduction in the BSA with significant improvement of the face, hands, feet or genital region.

Request for coverage must be made by a specialist in dermatology.

Avsola will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Psoriasis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Avsola to another infliximab product or vice versa, if previously trialed and deemed unresponsive to infliximab.

Crohn’s Disease
For treatment of moderate to severely active Crohn’s Disease in patients with inadequate response, intolerance or contraindications to an adequate course of corticosteroids AND an immunosuppressive agent.

Request for coverage must be made by a specialist in gastroenterology.

For Adults: Avsola, Renflexis or Inflectra will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Crohn’s Disease.
For Pediatrics: Avsola will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Crohn’s Disease.
Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Avsola to another infliximab product or vice versa, if previously trialed and deemed unresponsive to infliximab.
Fistulizing Crohn’s Disease
For the treatment of Fistulizing Crohn’s Disease in patients with actively draining perianal or enterocutaneous fistula who meet the following criteria:
● Presence of fistula that has persisted despite a course of antibiotic therapy (e.g. ciprofloxacin and/or metronidazole)
AND
● Have had inadequate response, intolerance or contraindications to an immunosuppressive agent (e.g. azathioprine or 6 mercaptopurine).

Request for coverage must be made by a specialist in gastroenterology.

For Adults: Avsola will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Fistulizing Crohn’s Disease.
Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Avsola to another infliximab product or vice versa, if previously trialed and deemed unresponsive to infliximab.

Ulcerative Colitis
For the treatment of patients with moderate to severely active ulcerative colitis who have had an inadequate response, intolerance or contraindications to conventional therapy including 5-aminosalicylate compounds AND corticosteroids.

Request for coverage must be made by a specialist in gastroenterology.

For Adults: Avsola will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Ulcerative Colitis.

For Pediatrics: Avsola will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Ulcerative Colitis.
Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Avsola to another infliximab product or vice versa, if previously trialed and deemed unresponsive to infliximab.

Rheumatoid Arthritis
For treatment of patients over 18 years of age who have moderate to severe active rheumatoid arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARD’s must also be tried.
Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.

Brenzys will be a preferred etanercept option for all etanercept-naive patients prescribed an etanercept product for Rheumatoid Arthritis. Preferred means the first etanercept product to be considered for reimbursement for etanercept-naive patients.
Patients will not be permitted to switch from Brenzys to another etanercept product or vice versa, if previously trialed and deemed unresponsive to etanercept.
Ankylosing Spondylitis
For the treatment of patients with active ankylosing spondylitis who have failed to respond to an adequate trial of at least three different nonsteroidal anti-inflammatory drugs (NSAIDs) and, in patients with peripheral joint involvement, have failed to respond to methotrexate or sulfasalazine.

Request for coverage must be made by a specialist in rheumatology.

Brenzys will be a preferred etanercept option for all etanercept-naive patients prescribed an etanercept product for Ankylosing Spondylitis. Preferred means the first etanercept product to be considered for reimbursement for etanercept-naive patients. Patients will not be permitted to switch from Brenzys to another etanercept product or vice versa, if previously trialed and deemed unresponsive to etanercept.

Psoriasis
For the treatment of adult patients with severe plaque psoriasis presently with one or more of the following:
• Psoriasis Area and the Severity Index (PASI) ≥ 10
• Significant involvement of the face, hands, feet or genital region
• Dermatology Life Quality Index (DLQI) > 10 AND
• Failure to respond to, contraindications to, intolerant of or unable to access methotrexate, cyclosporine and/or phototherapy.
Coverage will be approved initially for a maximum of 3 months. For continued coverage the physician must confirm the patient’s response to treatment and demonstration of treatment clinical benefits:
• ≥ 50% reduction in the PASI score with ≥ 5 point improvement in the DLQI
• ≥ 75% reduction in the PASI score
• ≥ 50% reduction in the BSA with significant improvement of the face, hands, feet or genital region

Request for coverage must be made by a specialist in dermatology.

Brenzys will be a preferred etanercept option for all etanercept-naive patients prescribed an etanercept product for Psoriasis. Preferred means the first etanercept product to be considered for reimbursement for etanercept-naive patients. Patients will not be permitted to switch from Brenzys to another etanercept product or vice versa, if previously trialed and deemed unresponsive to etanercept.

Polyarticular Juvenile Idiopathic Arthritis
For the treatment of active polyarticular juvenile idiopathic arthritis (pJIA) in patients 4 years of age or older who are intolerant to or have inadequate response to one or more disease-modifying anti-rheumatic drugs (DMARDs).

Request for coverage must be made by a specialist in rheumatology.

Brenzys will be a preferred etanercept option for all etanercept-naive patients weighing 63kg (138 pounds) or more who are prescribed an etanercept product for Polyarticular Juvenile Idiopathic Arthritis. Preferred means the first etanercept product to be considered for reimbursement for etanercept-naive patients. Patients will not be permitted to switch from Brenzys to another etanercept product or vice versa, if previously trialed and deemed unresponsive to etanercept.
Psoriatic Arthritis
For treatment of patients over 18 years of age who have active psoriatic arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARD’s must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.

Brenzys will be a preferred etanercept option for all etanercept-naive patients prescribed an etanercept product for Psoriatic Arthritis. Preferred means the first etanercept product to be considered for reimbursement for etanercept-naive patients. Patients will not be permitted to switch from Brenzys to another etanercept product or vice versa, if previously trialed and deemed unresponsive to etanercept.

Erelzi or Brenzys will be the preferred etanercept option for all etanercept-naive patients prescribed an etanercept product for Psoriasis. Preferred means the first etanercept product to be considered for reimbursement for etanercept-naive patients.

Patients will not be permitted to switch from Enbrel, Erelzi or Brenzys to another etanercept product or vice versa, if previously trialed and deemed unresponsive to etanercept.

| 02474263 | Humira | adalimumab | 20 mg/0.2 mL | Injection |

Pediatric Crohn’s Disease
For treatment of moderate to severely active Crohn’s Disease in patients with inadequate response, intolerance or contraindications to an adequate course of corticosteroids AND an immunosuppressive agent.

Request for coverage must be made by a specialist in gastroenterology.

Polyarticular Juvenile Idiopathic Arthritis
For the treatment of active polyarticular juvenile idiopathic arthritis (pJIA) in patients 2 years of age and older who are intolerant to or have inadequate response to one or more disease-modifying anti-rheumatic drugs (DMARDs).

Request for coverage must be made by a specialist in rheumatology.
Crohn's Disease
For treatment of moderate to severely active Crohn's Disease in patients with inadequate response, intolerance or contraindications to an adequate course of corticosteroids AND an immunosuppressive agent.

Request for coverage must be made by a specialist in gastroenterology.
Amgevita, Hadlima, Hulio, Hyrimoz or Idacio will be the preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Crohn's Disease. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Humira, Amgevita, Hadlima, Hulio, Hyrimoz or Idacio to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Fistulizing Crohn's Disease
For the treatment of Fistulizing Crohn's Disease in patients with actively draining perianal or enterocutaneous fistula who meet the following criteria:
• Presence of fistula that has persisted despite a course of antibiotic therapy (e.g. ciprofloxacin and/or metronidazole) AND
• Have had inadequate response, intolerance or contraindications to an immunosuppressive agent (e.g. azathioprine or 6 mercaptopurine).

Request for coverage must be made by a specialist in gastroenterology.
Amgevita, Hadlima, Hulio, Hyrimoz or Idacio will be the preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Fistulizing Crohn's Disease. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Humira, Amgevita, Hadlima, Hulio, Hyrimoz or Idacio to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Rheumatoid Arthritis
For treatment of patients over 18 years of age who have moderate to severe active rheumatoid arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARD’s must also be tried.

Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.
Amgevita, Hadlima, Hulio, Hyrimoz or Idacio will be the preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Rheumatoid Arthritis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Humira, Amgevita, Hadlima, Hulio, Hyrimoz or Idacio to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.
Psoriatic Arthritis
For treatment of patients over 18 years of age who have active psoriatic arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARD’s must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.

Amgevita, Hadlima, Hulio, Hyrimoz or Idacio will be the preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Psoriatic Arthritis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Humira, Amgevita, Hadlima, Hulio, Hyrimoz or Idacio to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Ankylosing Spondylitis
For the treatment of patients with active ankylosing spondylitis who have failed to respond to an adequate trial of at least three different nonsteroidal anti-inflammatory drugs (NSAIDs) and, in patients with peripheral joint involvement, who have failed to respond to methotrexate or sulfasalazine.

Request for coverage must be made by a specialist in rheumatology.

Amgevita, Hadlima, Hulio, Hyrimoz or Idacio will be the preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Ankylosing Spondylitis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Humira, Amgevita, Hadlima, Hulio, Hyrimoz or Idacio to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Psoriasis
For treatment of adult patients with severe plaque psoriasis presently with one or more of the following:
• Psoriasis Area and the Severity Index (PASI) ≥ 10
• Body Surface Area (BSA) > 10%
• Significant involvement of the face, hands feet or genital region
• Dermatology Life Quality Index (DLQI) > 10 AND
• Failure to respond to, contraindications to, intolerant of or unable to access methotrexate, cyclosporine and/or phototherapy.

Coverage will be approved initially for a maximum of 4 months. For continued coverage the physician must confirm the patient’s response to treatment and demonstration of treatment clinical benefits:
• ≥ 50% reduction in the PASI score with ≥ 5 point improvement in the DLQI
• ≥ 75 % reduction in the PASI score
• ≥ 50% reduction in the BSA with significant improvement of the face, hands, feet or genital region.

Request for coverage must be made by a specialist in dermatology.
Amgevita, Hadlima, Hulio, Hyrimoz or Idacio will be the preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Psoriasis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Humira, Amgevita, Hadlima, Hulio, Hyrimoz or Idacio to another adalimumab product or vice versa, if:

- Previously trialed and deemed unresponsive to adalimumab.

Polyarticular Juvenile Idiopathic Arthritis
For the treatment of active polyarticular juvenile idiopathic arthritis (pJIA) in patients 2 years of age and older who are intolerant to or have inadequate response to one or more disease-modifying anti-rheumatic drugs (DMARDs).

*Request for coverage must be made by a specialist in rheumatology.*

Amgevita, Hadlima, Hulio, Hyrimoz or Idacio will be the preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Polyarticular Juvenile Idiopathic Arthritis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Humira, Amgevita, Hadlima, Hulio, Hyrimoz or Idacio to another adalimumab product or vice versa, if:

- Previously trialed and deemed unresponsive to adalimumab.

Ulcerative Colitis
For the treatment of patients over 18 years of age with moderate to severely active ulcerative colitis who have had inadequate response, intolerance or contraindications to conventional therapy including 5-aminosalicylate compounds AND corticosteroids.

*Request for coverage must be made by a specialist in gastroenterology.*

Amgevita, Hadlima, Hulio, Hyrimoz or Idacio will be the preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Ulcerative Colitis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Humira, Amgevita, Hadlima, Hulio, Hyrimoz or Idacio to another adalimumab product or vice versa, if:

- Previously trialed and deemed unresponsive to adalimumab.

Hidradenitis Suppurativa
For the treatment of adult patients with active moderate to severe hidradenitis suppurativa who have not responded to conventional therapy (including systemic antibiotics) and who meet all of the following:

- A total abscess and nodule count of 3 or greater
- Lesions in at least two distinct anatomic areas, one of which must be Hurley Stage II or III
- An inadequate response to a 90-day trial of oral antibiotics
- Prescribed by a practitioner with expertise in the management of patients with HS

*Note: Treatment with adalimumab should be discontinued if there is no improvement after 12 weeks of treatment*

Amgevita, Hadlima, Hulio, Hyrimoz or Idacio will be the preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Hidradenitis Suppurativa. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Humira, Amgevita, Hadlima, Hulio, Hyrimoz or Idacio to another adalimumab product or vice versa, if:

- Previously trialed and deemed unresponsive to adalimumab.
**Crohn’s Disease**
For treatment of moderate to severely active Crohn's Disease in patients with inadequate response, intolerance or contraindications to an adequate course of corticosteroids AND an immunosuppressive agent.

*Request for coverage must be made by a specialist in gastroenterology.*

For Adults: Amgevita will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Crohn's Disease.

For Pediatrics: Amgevita will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Crohn's Disease.

Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Amgevita to another adalimumab product or vice versa, if:
- Previously trialed and deemed unresponsive to adalimumab.

**Fistulizing Crohn’s Disease**
For the treatment of Fistulizing Crohn's Disease in patients with actively draining perianal or enterocutaneous fistula who meet the following criteria:
- Presence of fistula that has persisted despite a course of antibiotic therapy (e.g. ciprofloxacin and/or metronidazole) AND
- Have had inadequate response, intolerance or contraindications to an immunosuppressive agent (e.g. azathioprine or 6 mercaptopurine).

*Request for coverage must be made by a specialist in gastroenterology.*

Amgevita will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Fistulizing Crohn's Disease.

Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Amgevita to another adalimumab product or vice versa, if:
- Previously trialed and deemed unresponsive to adalimumab.

**Rheumatoid Arthritis**
For treatment of patients over 18 years of age who have moderate to severe active rheumatoid arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARDs must also be tried.

Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

*Request for coverage must be made by a specialist in rheumatology.*

Amgevita will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Rheumatoid Arthritis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Amgevita to another adalimumab product or vice versa, if:
- Previously trialed and deemed unresponsive to adalimumab.
**Psoriatic Arthritis**

For treatment of patients over 18 years of age who have active psoriatic arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARDs must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

*Request for coverage must be made by a specialist in rheumatology.*

Amgevita will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Psoriatic Arthritis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to switch from Amgevita to another adalimumab product or vice versa, if:
- Previously trialed and deemed unresponsive to adalimumab.

**Ankylosing Spondylitis**

For the treatment of patients with active ankylosing spondylitis who have failed to respond to an adequate trial of at least three different nonsteroidal anti-inflammatory drugs (NSAIDs) and, in patients with peripheral joint involvement, who have failed to respond to methotrexate or sulfasalazine.

*Request for coverage must be made by a specialist in rheumatology.*

Amgevita will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Ankylosing Spondylitis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to switch from Amgevita to another adalimumab product or vice versa, if:
- Previously trialed and deemed unresponsive to adalimumab.

**Psoriasis**

For treatment of adult patients with severe plaque psoriasis presently with one or more of the following:
- *Psoriasis Area and the Severity Index (PASI) ≥ 10*
- *Body Surface Area (BSA) > 10%*
- *Significant involvement of the face, hands, feet or genital region*
- *Dermatology Life Quality Index (DLQI) > 10 AND*
- *Failure to respond to, contraindications to, intolerant of or unable to access methotrexate, cyclosporine and/or phototherapy.*

Coverage will be approved initially for a maximum of 4 months. For continued coverage the physician must confirm the patient’s response to treatment and demonstration of treatment clinical benefits:
- *≥ 50% reduction in the PASI score with ≥ 5 point improvement in the DLQI*
- *≥ 75 % reduction in the PASI score*
- *≥ 50% reduction in the BSA with significant improvement of the face, hands, feet or genital region.*

*Request for coverage must be made by a specialist in dermatology.*

Amgevita will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Psoriasis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to switch from Amgevita to another adalimumab product or vice versa, if:
- Previously trialed and deemed unresponsive to adalimumab.

Updated: January 25, 2022
Polyarticular Juvenile Idiopathic Arthritis
For the treatment of active polyarticular juvenile idiopathic arthritis (pJIA) in patients 2 years of age and older who are intolerant to or have inadequate response to one or more disease-modifying anti-rheumatic drugs (DMARDs).

Request for coverage must be made by a specialist in rheumatology.

Amgevita will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Polyarticular Juvenile Idiopathic Arthritis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to switch from Amgevita to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Ulcerative Colitis
For the treatment of patients over 18 years of age with moderate to severely active ulcerative colitis who have had inadequate response, intolerance or contraindications to conventional therapy including 5-aminosalicylate compounds AND corticosteroids.

Request for coverage must be made by a specialist in gastroenterology.

Amgevita will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Ulcerative Colitis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to switch from Amgevita to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Hidradenitis Suppurativa
For the treatment of adult patients with active moderate to severe hidradenitis suppurativa who have not responded to conventional therapy (including systemic antibiotics) and who meet all of the following:
• A total abscess and nodule count of 3 or greater
• Lesions in at least two distinct anatomic areas, one of which must be Hurley Stage II or III
• An inadequate response to a 90-day trial of oral antibiotics
• Prescribed by a practitioner with expertise in the management of patients with HS

Note: Treatment with adalimumab should be discontinued if there is no improvement after 12 weeks of treatment.

Amgevita will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Hidradenitis Suppurativa. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to switch from Amgevita to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.
Crohn's Disease
For treatment of moderate to severely active Crohn's Disease in patients with inadequate response, intolerance or contraindications to an adequate course of corticosteroids AND an immunosuppressive agent.

Request for coverage must be made by a specialist in gastroenterology.

For Adults: Hadlima will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Crohn's Disease.

Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Hadlima to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Fistulizing Crohn's Disease
For the treatment of Fistulizing Crohn's Disease in patients with actively draining perianal or enterocutaneous fistula who meet the following criteria:
• Presence of fistula that has persisted despite a course of antibiotic therapy (e.g. ciprofloxacin and/or metronidazole) AND
• Have had inadequate response, intolerance or contraindications to an immunosuppressive agent (e.g. azathioprine or 6 mercaptopurine).

Request for coverage must be made by a specialist in gastroenterology.

Hadlima will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Fistulizing Crohn's Disease.

Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Hadlima to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Rheumatoid Arthritis
For treatment of patients over 18 years of age who have moderate to severe active rheumatoid arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARDS must also be tried.

Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.

Hadlima will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Rheumatoid Arthritis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Hadlima to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.
Psoriatic Arthritis
For treatment of patients over 18 years of age who have active psoriatic arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARDs must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.

Hadlima will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Psoriatic Arthritis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to switch from Hadlima to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Ankylosing Spondylitis
For the treatment of patients with active ankylosing spondylitis who have failed to respond to an adequate trial of at least three different nonsteroidal anti-inflammatory drugs (NSAIDs) and, in patients with peripheral joint involvement, who have failed to respond to methotrexate or sulfasalazine.

Request for coverage must be made by a specialist in rheumatology.

Hadlima will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Ankylosing Spondylitis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to switch from Hadlima to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Psoriasis
For treatment of adult patients with severe plaque psoriasis presently with one or more of the following:
• Psoriasis Area and the Severity Index (PASI) ≥ 10
• Body Surface Area (BSA) > 10%
• Significant involvement of the face, hands, feet or genital region
• Dermatology Life Quality Index (DLQI) > 10 AND
• Failure to respond to, contraindications to, intolerant of or unable to access methotrexate, cyclosporine and/or phototherapy.

Coverage will be approved initially for a maximum of 4 months. For continued coverage the physician must confirm the patient’s response to treatment and demonstration of treatment clinical benefits:
• ≥ 50% reduction in the PASI score with ≥ 5 point improvement in the DLQI
• ≥ 75 % reduction in the PASI score
• ≥ 50% reduction in the BSA with significant improvement of the face, hands, feet or genital region.

Request for coverage must be made by a specialist in dermatology.

Hadlima will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Psoriasis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to switch from Hadlima to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.
**Polyarticular Juvenile Idiopathic Arthritis**
For the treatment of active polyarticular juvenile idiopathic arthritis (pJIA) in patients 2 years of age and older who are intolerant to or have inadequate response to one or more disease-modifying anti-rheumatic drugs (DMARDs).

*Request for coverage must be made by a specialist in rheumatology.*

Hadlima will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Polyarticular Juvenile Idiopathic Arthritis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Hadlima to another adalimumab product or vice versa, if:

- Previously trialed and deemed unresponsive to adalimumab.

**Ulcerative Colitis**
For the treatment of patients over 18 years of age with moderate to severely active ulcerative colitis who have had inadequate response, intolerance or contraindications to conventional therapy including 5-aminosalicylate compounds AND corticosteroids.

*Request for coverage must be made by a specialist in gastroenterology.*

Hadlima will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Ulcerative Colitis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Hadlima to another adalimumab product or vice versa, if:

- Previously trialed and deemed unresponsive to adalimumab.

**Hidradenitis Suppurativa**
For the treatment of adult patients with active moderate to severe hidradenitis suppurativa who have not responded to conventional therapy (including systemic antibiotics) and who meet all of the following:

- A total abscess and nodule count of 3 or greater
- Lesions in at least two distinct anatomic areas, one of which must be Hurley Stage II or III

**Crohn's Disease**
For treatment of moderate to severely active Crohn's Disease in patients with inadequate response, intolerance or contraindications to an adequate course of corticosteroids AND an immunosuppressive agent.

*Request for coverage must be made by a specialist in gastroenterology.*

For Adults: Hyrimoz will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Crohn's Disease.

Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Hyrimoz to another adalimumab product or vice versa, if:

- Previously trialed and deemed unresponsive to adalimumab.

**Fistulizing Crohn's Disease**
For the treatment of Fistulizing Crohn's Disease in patients with actively draining perianal or enterocutaneous fistula who meet the following criteria:

- Presence of fistula that has persisted despite a course of antibiotic therapy (e.g. ciprofloxacin and/or metronidazole) AND
- Have had inadequate response, intolerance or contraindications to an immunosuppressive agent (e.g. azathioprine or 6 mercaptopurine).

*Request for coverage must be made by a specialist in gastroenterology.*

Hyrimoz will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Fistulizing Crohn's Disease.

Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Hyrimoz to another adalimumab product or vice versa, if:

- Previously trialed and deemed unresponsive to adalimumab.

**Rheumatoid Arthritis**
For treatment of patients over 18 years of age who have moderate to severe active rheumatoid arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented.

One combination therapy of DMARDs must also be tried.

Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

*Request for coverage must be made by a specialist in rheumatology.*

Hyrimoz will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Rheumatoid Arthritis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Hyrimoz to another adalimumab product or vice versa, if:

- Previously trialed and deemed unresponsive to adalimumab.
Psoriatic Arthritis
For treatment of patients over 18 years of age who have active psoriatic arthritis who have
failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or
leflunomide unless intolerance or contraindications to these agents is documented. One
combination therapy of DMARDs must also be tried. Initial application information should
include information on disease activity such as the number of tender joints, swollen joints,
erthrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.

Hyrimoz will be a preferred adalimumab option for all adalimumab-naïve patients prescribed
an adalimumab product for Psoriatic Arthritis. Preferred means the first adalimumab product
to be considered for reimbursement for adalimumab-naive patients. Patients will not be
permitted to switch from Hyrimoz to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Ankylosing Spondylitis
For the treatment of patients with active ankylosing spondylitis who have failed to respond to
an adequate trial of at least three different nonsteroidal anti-inflammatory drugs (NSAIDs) and,
in patients with peripheral joint involvement, who have failed to respond to methotrexate or
sulfasalazine.

Request for coverage must be made by a specialist in rheumatology.

Hyrimoz will be a preferred adalimumab option for all adalimumab-naïve patients prescribed
an adalimumab product for Ankylosing Spondylitis. Preferred means the first adalimumab
product to be considered for reimbursement for adalimumab-naive patients. Patients will not be
permitted to switch from Hyrimoz to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Psoriasis
For treatment of adult patients with severe plaque psoriasis presently with one or more of the
following:
• Psoriasis Area and the Severity Index (PASI) ≥ 10
• Body Surface Area (BSA) > 10%
• Significant involvement of the face, hands, feet or genital region
• Dermatology Life Quality Index (DLQI) > 10 AND
• Failure to respond to, contraindications to, intolerant of or unable to access methotrexate,
cyclosporine and/or phototherapy.

Coverage will be approved initially for a maximum of 4 months. For continued coverage the
physician must confirm the patient’s response to treatment and demonstration of treatment
clinical benefits:
• ≥ 50% reduction in the PASI score with ≥ 5 point improvement in the DLQI
• ≥ 75% reduction in the PASI score
• ≥ 50% reduction in the BSA with significant improvement of the face, hands, feet or genital
region.

Request for coverage must be made by a specialist in dermatology.

Hyrimoz will be a preferred adalimumab option for all adalimumab-naïve patients prescribed
an adalimumab product for Psoriasis. Preferred means the first adalimumab product to be
considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to
switch from Hyrimoz to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.
Polyarticular Juvenile Idiopathic Arthritis
For the treatment of active polyarticular juvenile idiopathic arthritis (pJIA) in patients 2 years of age and older who are intolerant to or have inadequate response to one or more disease-modifying anti-rheumatic drugs (DMARDs).

*Request for coverage must be made by a specialist in rheumatology.*

Hyrimoz will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Polyarticular Juvenile Idiopathic Arthritis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to switch from Hyrimoz to another adalimumab product or vice versa, if:
- Previously trialed and deemed unresponsive to adalimumab.

Ulcerative Colitis
For the treatment of patients over 18 years of age with moderate to severely active ulcerative colitis who have had inadequate response, intolerance or contraindications to conventional therapy including 5-aminosalicylate compounds AND corticosteroids.

*Request for coverage must be made by a specialist in gastroenterology.*

Hyrimoz will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Ulcerative Colitis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to switch from Hyrimoz to another adalimumab product or vice versa, if:
- Previously trialed and deemed unresponsive to adalimumab.

Hidradenitis Suppurativa
For the treatment of adult patients with active moderate to severe hidradenitis suppurativa who have not responded to conventional therapy (including systemic antibiotics) and who meet all of the following:
- A total abscess and nodule count of 3 or greater
- Lesions in at least two distinct anatomic areas, one of which must be Hurley Stage II or III
- An inadequate response to a 90-day trial of oral antibiotics
- Prescribed by a practitioner with expertise in the management of patients with HS

Note: Treatment with adalimumab should be discontinued if there is no improvement after 12 weeks of treatment.

Hyrimoz will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Hidradenitis Suppurativa. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to switch from Hyrimoz to another adalimumab product or vice versa, if:
- Previously trialed and deemed unresponsive to adalimumab.
**Crohn's Disease**

For treatment of moderate to severely active Crohn's Disease in patients with inadequate response, intolerance or contraindications to an adequate course of corticosteroids AND an immunosuppressive agent.

*Request for coverage must be made by a specialist in gastroenterology.*

For Adults: Idacio will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Crohn's Disease.

For Pediatrics: Idacio will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Crohn's Disease.

Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Idacio to another adalimumab product or vice versa, if:

• Previously trialed and deemed unresponsive to adalimumab.

**Fistulizing Crohn's Disease**

For the treatment of Fistulizing Crohn's Disease in patients with actively draining perianal or enterocutaneous fistula who meet the following criteria:

• Presence of fistula that has persisted despite a course of antibiotic therapy (e.g. ciprofloxacin and/or metronidazole) AND

• Have had inadequate response, intolerance or contraindications to an immunosuppressive agent (e.g. azathioprine or 6 mercaptopurine).

*Request for coverage must be made by a specialist in gastroenterology.*

Idacio will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Fistulizing Crohn's Disease.

Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Idacio to another adalimumab product or vice versa, if:

• Previously trialed and deemed unresponsive to adalimumab.

**Rheumatoid Arthritis**

For treatment of patients over 18 years of age who have moderate to severe active rheumatoid arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented.

One combination therapy of DMARDs must also be tried.

Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

*Request for coverage must be made by a specialist in rheumatology.*

Idacio will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Rheumatoid Arthritis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Idacio to another adalimumab product or vice versa, if:

• Previously trialed and deemed unresponsive to adalimumab.
Psoriatic Arthritis
For treatment of patients over 18 years of age who have active psoriatic arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARDs must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.

Idacio will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Psoriatic Arthritis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to switch from Idacio to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Ankylosing Spondylitis
For the treatment of patients with active ankylosing spondylitis who have failed to respond to an adequate trial of at least three different nonsteroidal anti-inflammatory drugs (NSAIDs) and, in patients with peripheral joint involvement, who have failed to respond to methotrexate or sulfasalazine.

Request for coverage must be made by a specialist in rheumatology.

Idacio will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Ankylosing Spondylitis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to switch from Idacio to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Psoriasis
For treatment of adult patients with severe plaque psoriasis presently with one or more of the following:
• Psoriasis Area and the Severity Index (PASI) ≥ 10
• Body Surface Area (BSA) > 10%
• Significant involvement of the face, hands, feet or genital region
• Dermatology Life Quality Index (DLQI) > 10 AND
• Failure to respond to, contraindications to, intolerant of or unable to access methotrexate, cyclosporine and/or phototherapy.

Coverage will be approved initially for a maximum of 4 months. For continued coverage the physician must confirm the patient’s response to treatment and demonstration of treatment clinical benefits:
• ≥ 50% reduction in the PASI score with ≥ 5 point improvement in the DLQI
• ≥ 75 % reduction in the PASI score
• ≥ 50% reduction in the BSA with significant improvement of the face, hands, feet or genital region.

Request for coverage must be made by a specialist in dermatology.

Idacio will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Psoriasis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naive patients. Patients will not be permitted to switch from Idacio to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.
Polyarticular Juvenile Idiopathic Arthritis
For the treatment of active polyarticular juvenile idiopathic arthritis (pJIA) in patients 2 years of age and older who are intolerant to or have inadequate response to one or more disease-modifying anti-rheumatic drugs (DMARDs).

Request for coverage must be made by a specialist in rheumatology.

Idacio will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Polyarticular Juvenile Idiopathic Arthritis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Idacio to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Ulcerative Colitis
For the treatment of patients over 18 years of age with moderate to severely active ulcerative colitis who have had inadequate response, intolerance or contraindications to conventional therapy including 5-aminosalicylate compounds AND corticosteroids.

Request for coverage must be made by a specialist in gastroenterology.

Idacio will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Ulcerative Colitis. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Idacio to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.

Hidradenitis Suppurativa
For the treatment of adult patients with active moderate to severe hidradenitis suppurativa who have not responded to conventional therapy (including systemic antibiotics) and who meet all of the following:
• A total abscess and nodule count of 3 or greater
• Lesions in at least two distinct anatomic areas, one of which must be Hurley Stage II or III
• An inadequate response to a 90-day trial of oral antibiotics
• Prescribed by a practitioner with expertise in the management of patients with HS

Note: Treatment with adalimumab should be discontinued if there is no improvement after 12 weeks of treatment.

Idacio will be a preferred adalimumab option for all adalimumab-naïve patients prescribed an adalimumab product for Hidradenitis Suppurativa. Preferred means the first adalimumab product to be considered for reimbursement for adalimumab-naïve patients. Patients will not be permitted to switch from Idacio to another adalimumab product or vice versa, if:
• Previously trialed and deemed unresponsive to adalimumab.
For the treatment of patients over 18 years of age who have moderate to severe active rheumatoid arthritis who have failed treatment with at least 3 DMARD (disease modifying antirheumatic drug) therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARDs must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

"Request for coverage must be made by a specialist in rheumatology."

Renflexis will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Rheumatoid Arthritis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Renflexis to another infliximab product or vice versa, if previously trialed and deemed unresponsive to infliximab.
Psoriatic Arthritis
For treatment of patients over 18 years of age who have active psoriatic arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindication to these agents is documented. One combination therapy of DMARD must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.

Renflexis will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Psoriatic Arthritis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Renflexis to another infliximab product or vice versa, if previously trialed and deemed unresponsive to infliximab.

Ankylosing Spondylitis
For the treatment of patients with active ankylosing spondylitis who have failed to respond to an adequate trial of at least three different non-steroidal anti-inflammatory drugs (NSAIDs) and, in patients with peripheral joint involvement, have failed to respond to methotrexate or sulfazalazine.

Request for coverage must be made by a specialist in rheumatology.

Renflexis will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Ankylosing Spondylitis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Renflexis to another infliximab product or vice versa, if previously trialed and deemed unresponsive to infliximab.

Psoriasis
For the treatment of adult patients with severe plaque psoriasis with one or more of the following:
- Psoriasis Area and Severity Index (PASI) ≥ 10;
- Body Surface Area (BSA) > 10 percent;
- Dermatology Life Quality Index (DLQI) > 10;
- Significant involvement of the face, hands, feet or genital region; AND
- Failure to respond to, contraindications to, intolerant of or unable to access methotrexate, cyclosporine and/or phototherapy.

The initial request is approved for a maximum of 4 months. For continued coverage the physician must confirm the patient's response to treatment and demonstration of treatment clinical benefits:
- ≥ 50 percent reduction in the PASI score with ≥ 5 point improvement in the DLQI; OR
- ≥ 75 percent reduction in the PASI score; OR
- ≥ 50 percent reduction in the BSA with significant improvement of the face, hands, feet or genital region.

Request for coverage must be made by a specialist in dermatology.

Renflexis will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Psoriasis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Renflexis to another infliximab product or vice versa, if previously trialed and deemed unresponsive to infliximab.
Crohn's Disease
For treatment of moderate to severely active Crohn's Disease in patients with inadequate response, intolerance or contraindications to an adequate course of corticosteroids AND an immunosuppressive agent.

Request for coverage must be made by a specialist in gastroenterology.

For Adults: Renflexis will be a preferred infliximab option for all infliximab-naive adult patients prescribed an infliximab product for Crohn's Disease.
For Pediatrics: Renflexis will be a preferred infliximab option for all infliximab-naive pediatric patients prescribed an infliximab product for Crohn's Disease.

Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients.
Patients will not be permitted to switch from Renflexis to another infliximab product or vice versa, if previously trialed and deemed unresponsive to infliximab.

Fistulizing Crohn's Disease
For the treatment of Fistulizing Crohn's Disease in patients with actively draining perianal or enterocutaneous fistula who meet the following criteria:
• Presence of fistula that has persisted despite a course of antibiotic therapy (e.g. ciprofloxacin and/or metronidazole) AND
• Have had inadequate response, intolerance or contraindications to an immunosuppressive agent (e.g. azathioprine or 6 mercaptopurine).

Request for coverage must be made by a specialist in gastroenterology.

For Adults: Renflexis will be a preferred infliximab option for all infliximab-naive adult patients prescribed an infliximab product for Fistulizing Crohn's Disease.
For Pediatrics: Renflexis will be a preferred infliximab option for all infliximab-naive pediatric patients prescribed an infliximab product for Fistulizing Crohn's Disease.

Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients.
Patients will not be permitted to switch from Renflexis to another infliximab product or vice versa, if previously trialed and deemed unresponsive to infliximab.

Ulcerative Colitis
For the treatment of patients with moderate to severely active ulcerative colitis who have had inadequate response, intolerance or contraindications to conventional therapy including 5-aminosalicylate compounds AND corticosteroids.

Request for coverage must be made by a specialist in gastroenterology.

For Adults: Renflexis will be a preferred infliximab option for all infliximab-naive adult patients prescribed an infliximab product for Ulcerative Colitis.
For Pediatrics: Renflexis will be a preferred infliximab option for all infliximab-naive pediatric patients prescribed an infliximab product for Ulcerative Colitis.

Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients.
Patients will not be permitted to switch from Renflexis to another infliximab product or vice versa, if previously trialed and deemed unresponsive to infliximab.
Rheumatoid Arthritis
For the treatment of patients over 18 years of age who have moderate to severe active rheumatoid arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARDs must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.

Inflectra will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Rheumatoid Arthritis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients.

Patients will not be permitted to switch from Inflectra to another infliximab product or vice versa, if previously trialed and deemed unresponsive to therapy.

Psoriatic Arthritis
For treatment of patients over 18 years of age who have active psoriatic arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindication to these agents is documented. One combination therapy of DMARD must also be tried. Initial application information should include information on disease activity such as the number of tender joins, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.

Inflectra will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Psoriatic Arthritis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients.

Patients will not be permitted to switch from Inflectra to another infliximab product or vice versa, if previously trialed and deemed unresponsive to therapy.

Ankylosing Spondylitis
For the treatment of patients with active ankylosing spondylitis who have failed to respond to an adequate trial of at least three different non-steroidal anti-inflammatory drugs (NSAIDs) and, in patients with peripheral joint involvement, have failed to respond to methotrexate or sulfazalazine.

Request for coverage must be made by a specialist in rheumatology.

Inflectra will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Ankylosing Spondylitis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients.

Patients will not be permitted to switch from Inflectra to another infliximab product or vice versa, if previously trialed and deemed unresponsive to therapy.

Psoriasis
For the treatment of adult patients with severe plaque psoriasis with one or more of the following:
- Psoriasis Area and Severity Index (PASI) ≥ 10;
- Body Surface Area (BSA) > 10 percent;
- Dermatology Life Quality Index (DLQI) > 10;
- Significant involvement of the face, hands, feet or genital region; AND
- Failure to respond to, contraindications to, intolerant of or unable to access methotrexate, cyclosporine and/or phototherapy.
The initial request is approved for a maximum of 4 months. For continued coverage the physician must confirm the patient's response to treatment and demonstration of treatment clinical benefits:
- ≥ 50 percent reduction in the PASI score with ≥ point improvement in the DLQI; OR
- ≥ 75 percent reduction in the PASI score; OR
- ≥ 50 percent reduction in the BSA with significant improvement of the face, hands, feet or genital region.

Request for coverage must be made by a specialist in dermatology.

Inflectra will be a preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Psoriasis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Inflectra to another infliximab product or vice versa, if previously trialed and deemed unresponsive to therapy.

Crohn's Disease
For treatment of moderate to severely active Crohn's Disease in patients with inadequate response, intolerance or contraindications to an adequate course of corticosteroids AND an immunosuppressive agent.

Request for coverage must be made by a specialist in gastroenterology.

For Adults: Inflectra will be a preferred infliximab option for all infliximab-naive adult patients prescribed an infliximab product for Crohn's Disease.
For Pediatrics: Inflectra will be a preferred infliximab option for all infliximab-naive pediatric patients prescribed an infliximab product for Crohn's Disease.

Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Inflectra to another infliximab product or vice versa, if previously trialed and deemed unresponsive to therapy.

Fistulizing Crohn's Disease
For the treatment of Fistulizing Crohn's Disease in patients with actively draining perianal or enterocutaneous fistula who meet the following criteria:
- Presence of fistula that has persisted despite a course of antibiotic therapy (e.g. ciprofloxacin and/or metronidazole) AND
- Have had inadequate response, intolerance or contraindications to an immunosuppressive agent (e.g. azathioprine or 6 mercaptopurine).

Request for coverage must be made by a specialist in gastroenterology.

For Adults: Inflectra will be a preferred infliximab option for all infliximab-naive adult patients prescribed an infliximab product for Fistulizing Crohn's Disease.
For Pediatrics: Inflectra will be a preferred infliximab option for all infliximab-naive pediatric patients prescribed an infliximab product for Fistulizing Crohn's Disease.

Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Inflectra to another infliximab product or vice versa, if previously trialed and deemed unresponsive to therapy.
Ulcerative Colitis
For the treatment of patients with moderate to severely active ulcerative colitis who have had inadequate response, intolerance or contraindications to conventional therapy including 5-aminosalicylate compounds AND corticosteroids.

Request for coverage must be made by a specialist in gastroenterology.

For Adults: Inflectra will be a preferred infliximab option for all infliximab-naive adult patients prescribed an infliximab product for Ulcerative Colitis.
For Pediatrics: Inflectra will be a preferred infliximab option for all infliximab-naive pediatric patients prescribed an infliximab product for Ulcerative Colitis.

Preferred means the first infliximab product to be considered for reimbursement for infliximab-naïve patients.
Patients will not be permitted to switch from Inflectra to another infliximab product or vice versa, if previously trialed and deemed unresponsive to therapy.

| 02244016 | Remicade | infliximab | 100 mg/10 mL | Injection |

Crohn's Disease
For treatment of moderate to severely active Crohn's Disease in patients with inadequate response, intolerance or contraindications to an adequate course of corticosteroids AND an immunosuppressive agent.

Request for coverage must be made by a specialist in gastroenterology.

For Adults: Renflexis, Inflectra or Avsola will be the preferred infliximab option for all infliximab-naive adult patients prescribed an infliximab product for Crohn's Disease.
For Pediatrics: Renflexis, Inflectra or Avsola will be the preferred infliximab option for all infliximab-naive pediatric patients prescribed an infliximab product for Crohn's Disease.

Preferred means the first infliximab product to be considered for reimbursement for infliximab-naïve patients.
Patients will not be permitted to switch from Remicade, Renflexis, Inflectra or Avsola to another infliximab product or vice versa, if previously trialed and deemed unresponsive to therapy.

Fistulizing Crohn's Disease
For the treatment of Fistulizing Crohn's Disease in patients with actively draining perianal or enterocutaneous fistula who meet the following criteria:

• Presence of fistula that has persisted despite a course of antibiotic therapy (e.g. ciprofloxacin and/or metronidazole) AND
• Have had inadequate response, intolerance or contraindications to an immunosuppressive agent (e.g. azathioprine or 6 mercaptopurine).

Request for coverage must be made by a specialist in gastroenterology.

For Adults: Renflexis, Inflectra or Avsola will be the preferred infliximab option for all infliximab-naive adult patients prescribed an infliximab product for Fistulizing Crohn's Disease.
For Pediatrics: Renflexis, Inflectra or Avsola will be the preferred infliximab option for all infliximab-naive pediatric patients prescribed an infliximab product for Fistulizing Crohn's Disease.

Preferred means the first infliximab product to be considered for reimbursement for infliximab-naïve patients.
Patients will not be permitted to switch from Remicade, Renflexis, Inflectra or Avsola to another infliximab product or vice versa, if previously trialed and deemed unresponsive to therapy.
Rheumatoid Arthritis
For the treatment of patients over 18 years of age who have moderate to severe active rheumatoid arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARDs must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.

Renflexis, Inflectra or Avsola will be the preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Rheumatoid Arthritis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients.

Patients will not be permitted to switch from Remicade, Renflexis, Inflectra or Avsola to another infliximab product or vice versa, if previously trialed and deemed unresponsive to therapy.

Psoriatic Arthritis
For treatment of patients over 18 years of age who have active psoriatic arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindication to these agents is documented. One combination therapy of DMARDs must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.

Renflexis, Inflectra or Avsola will be the preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Psoriatic Arthritis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients.

Patients will not be permitted to switch from Remicade, Renflexis, Inflectra or Avsola to another infliximab product or vice versa, if previously trialed and deemed unresponsive to therapy.

Ankylosing Spondylitis
For the treatment of patients with active ankylosing spondylitis who have failed to respond to an adequate trial of at least three different non-steroidal anti-inflammatory drugs (NSAIDs) and, in patients with peripheral joint involvement, have failed to respond to methotrexate or sulfasalazine.

Request for coverage must be made by a specialist in rheumatology.

Renflexis, Inflectra or Avsola will be the preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Ankylosing Spondylitis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients.

Patients will not be permitted to switch from Remicade, Renflexis, Inflectra or Avsola to another infliximab product or vice versa, if previously trialed and deemed unresponsive to therapy.

Psoriasis
For the treatment of adult patients with severe plaque psoriasis with one or more of the following:
- Psoriasis Area and Severity Index (PASI) ≥ 10;
- Body Surface Area (BSA) > 10 percent;
- Dermatology Life Quality Index (DLQI) > 10;
- Significant involvement of the face, hands, feet or genital region; AND
- Failure to respond to, contraindications to, intolerant of or unable to access methotrexate, cyclosporine and/or phototherapy.
The initial request is approved for a maximum of 4 months. For continued coverage the physician must confirm the patient's response to treatment and demonstration of treatment clinical benefits:
≥ 50 percent reduction in the PASI score with ≥ 5 point improvement in the DLQI; OR
≥ 75 percent reduction in the PASI score; OR
≥ 50 percent reduction in the BSA with significant improvement of the face, hands, feet or genital region.

Request for coverage must be made by a specialist in dermatology.

*Renflexis, Inflectra or Avsola will be the preferred infliximab option for all infliximab-naive patients prescribed an infliximab product for Psoriasis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Remicade, Renflexis, Inflectra or Avsola to another infliximab product or vice versa, if previously trialed and deemed unresponsive to therapy.*

**Ulcerative Colitis**

For the treatment of patients with moderate to severely active ulcerative colitis who have had inadequate response, intolerance or contraindications to conventional therapy including 5-aminosalicylate compounds AND corticosteroids.

Request for coverage must be made by a specialist in gastroenterology.

*For Adults: Renflexis, Inflectra or Avsola will be the preferred infliximab option for all infliximab-naive adult patients prescribed an infliximab product for Ulcerative Colitis. For Pediatrics: Renflexis, Inflectra or Avsola will be the preferred infliximab option for all infliximab-naive pediatric patients prescribed an infliximab product for Ulcerative Colitis. Preferred means the first infliximab product to be considered for reimbursement for infliximab-naive patients. Patients will not be permitted to switch from Remicade, Renflexis, Inflectra or Avsola to another infliximab product or vice versa, if previously trialed and deemed unresponsive to therapy.*

| 02241927 | Rituxan | rituximab | 10 mg/mL | Injection |

**Rheumatoid Arthritis**

For the treatment of severely active rheumatoid arthritis (RA), in combination with methotrexate, for patients who have failed to respond to an adequate trial of one or more anti-tumor necrosis factor (anti-TNF) agents (monoclonal antibody OR fusion protein) OR who are contraindicated to anti-TNF agents.

Request for coverage must be made by a specialist in rheumatology.

*Riximyo, Ruxience or Truxima will be the preferred rituximab option for all rituximab-naive patients prescribed a rituximab product for Rheumatoid Arthritis. Preferred means the first rituximab product to be considered for reimbursement for rituximab-naive patients. Patients will not be permitted to switch from Rituxan, Riximyo, Ruxience or Truxima to another rituximab product or vice versa, if previously trialed and deemed unresponsive to therapy.*
Granulomatosis with Polyangiitis (GPA) and Microscopic Polyangiitis (MPA)
As induction-remission therapy for patients with severely active granulomatosis with polyangiitis (GPA) and microscopic polyangiitis (MPA) in whom the cyclophosphamide has failed; or the use of cyclophosphamide is not appropriate.

**Ruxience or Truxima will be the preferred rituximab option for all rituximab-naive patients prescribed a rituximab product for GPA and MPA.** Preferred means the first rituximab product to be considered for reimbursement for rituximab-naive patients. Patients will not be permitted to switch from Rituxan, Ruxience or Truxima to another rituximab product or vice versa, if previously trialed and deemed unresponsive to therapy.

---

| 02498316 | Riximyo | rituximab | 10 mg/mL | Injection |

**Rheumatoid Arthritis**
For the treatment of severely active rheumatoid arthritis (RA), in combination with methotrexate, for patients who have failed to respond to an adequate trial of one or more anti-tumor necrosis factor (anti-TNF) agents (monoclonal antibody OR fusion protein) OR who are contraindicated to anti-TNF agents.

Request for coverage must be made by a specialist in rheumatology.

**Riximyo will be a preferred rituximab option for all rituximab-naive patients prescribed a rituximab product for Rheumatoid Arthritis.** Preferred means the first rituximab product to be considered for reimbursement for rituximab-naive patients. Patients will not be permitted to switch from Riximyo to another rituximab product or vice versa, if previously trialed and deemed unresponsive to therapy.

---

| 02495724 | Ruxience | rituximab | 10 mg/mL | Injection |

**Rheumatoid Arthritis**
For the treatment of severely active rheumatoid arthritis (RA), in combination with methotrexate, for patients who have failed to respond to an adequate trial of one or more anti-tumor necrosis factor (anti-TNF) agents (monoclonal antibody OR fusion protein) OR who are contraindicated to anti-TNF agents.

Request for coverage must be made by a specialist in rheumatology.

**Ruxience will be a preferred rituximab option for all rituximab-naive patients prescribed a rituximab product for Rheumatoid Arthritis.** Preferred means the first rituximab product to be considered for reimbursement for rituximab-naive patients. Patients will not be permitted to switch from Ruxience to another rituximab product or vice versa, if previously trialed and deemed unresponsive to therapy.

---

**Granulomatosis with Polyangiitis (GPA) and Microscopic Polyangiitis (MPA)**
As Induction-remission therapy for patients with severely active Granulomatosis with Polyangiitis (GPA) and Microscopic Polyangiitis (MPA) in whom:
• the use of cyclophosphamide has failed; or
• the use of cyclophosphamide is not appropriate

**Ruxience will be a preferred rituximab option for all rituximab-naive patients prescribed a rituximab product for GPA and MPA.** Preferred means the first rituximab product to be considered for reimbursement for rituximab-naive patients. Patients will not be permitted to switch from Ruxience to another rituximab product or vice versa, if previously trialed and deemed unresponsive to therapy.
**Rheumatoid Arthritis**
For the treatment of severely active rheumatoid arthritis (RA), in combination with methotrexate, for patients who have failed to respond to an adequate trial of one or more anti-tumor necrosis factor (anti-TNF) agents (monoclonal antibody OR fusion protein) OR who are contraindicated to anti-TNF agents.

*Request for coverage must be made by a specialist in rheumatology.*

**Truxima will be a preferred rituximab option for all rituximab-naive patients prescribed a rituximab product for Rheumatoid Arthritis. Preferred means the first rituximab product to be considered for reimbursement for rituximab-naive patients. Patients will not be permitted to switch from Truxima to another rituximab product or vice versa, if previously trialed and deemed unresponsive to therapy.**

**Granulomatosis with Polyangiitis (GPA) and Microscopic Polyangiitis (MPA)**
As induction-remission therapy for patients with severely active granulomatosis with polyangiitis (GPA) and microscopic polyangiitis (MPA) in whom:
- the use of cyclophosphamide has failed; or
- the use of cyclophosphamide is not appropriate

**Truxima will be a preferred rituximab option for all rituximab-naive patients prescribed a rituximab product for GPA and MPA. Preferred means the first rituximab product to be considered for reimbursement for rituximab-naive patients. Patients will not be permitted to switch from Truxima to another rituximab product or vice versa, if previously trialed and deemed unresponsive to therapy.**

**Rheumatoid Arthritis**
For the treatment of adult patients who have moderate to severe active rheumatoid arthritis and who:
(i) failed treatment with at least 3 DMARD (disease-modifying antirheumatic drugs) therapies, one of which therapies must be either methotrexate or leflunomide, unless intolerance or contraindication to these therapies is documented; and
(ii) previously tried at least one combination of DMARD therapies.

*Request for coverage must be made by a specialist in rheumatology.*

**Giant Cell Arteritis**
For treatment of Giant Cell Arteritis (GCA) in adult patients where the following criteria are met:
- At initiation of therapy, or with relapse, patients should be receiving prednisone.
- Duration of therapy with tocilizumab should be limited to 52 weeks per treatment course.

*Patients should be under the care of a physician with the experience of diagnosis and management of GCA.*
**Actemra**
tocilizumab

**Rheumatoid Arthritis**
For the treatment of adult patients who have moderate to severe active rheumatoid arthritis and who:
(i) failed treatment with at least 3 DMARD (disease-modifying antirheumatic drugs) therapies, one of which therapies must be either methotrexate or leflunomide, unless intolerance or contraindication to these therapies is documented; and
(ii) previously tried at least one combination of DMARD therapies.

*Request for coverage must be made by a specialist in rheumatology.*

**Systemic Juvenile Idiopathic Arthritis**
For the treatment of active systemic juvenile idiopathic arthritis (sJIA) in patients 2 years of age and older who:
(i) have responded inadequately to previous therapy with one or more non steroidal anti-inflammatory drugs; and
(ii) who have responded inadequately to previous therapy with one or more systemic corticosteroids.

**Polyarticular Juvenile Idiopathic Arthritis**
For the treatment of active polyarticular juvenile idiopathic arthritis (pJIA) in patients 2 years of age and older who are intolerant to or have inadequate response to one or more disease-modifying anti-rheumatic drugs (DMARDs).

*Request for coverage must be made by a specialist in rheumatology.*

**Simponi**
golimumab

**Rheumatoid Arthritis**
For treatment of patients over 18 years of age who have moderate to severe active rheumatoid arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARDs must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

**Ankylosing Spondylitis**
For the treatment of patients with active ankylosing spondylitis who have failed to respond to an adequate trial of at least three different nonsteroidal anti-inflammatory drugs (NSAIDs) and, in patients with peripheral joint involvement, have failed to respond to methotrexate or sulfasalazine.

**Psoriatic Arthritis**
For the treatment of patients over 18 years of age who have active psoriatic arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARDs must also have been tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

*Request for coverage must be made by a specialist in rheumatology.*
**Ulcerative Colitis**  
For the treatment of patients over 18 years of age with moderate to severely active ulcerative colitis who have had inadequate response, intolerance or contraindications to conventional therapy including 5-aminosalicylate compounds AND corticosteroids.  
*Request for coverage must be made by a specialist in gastroenterology.*

| 02417472 | Simponi IV | golimumab | 50 mg/4 mL | Injection |

**Rheumatoid Arthritis**  
For treatment of patients over 18 years of age who have moderate to severe active rheumatoid arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARDS must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.  
*Request for coverage must be made by a specialist in rheumatology.*

| 02331675 | Cimzia | certolizumab | 200 mg/mL | Injection |
| 02465574 | Cimzia | certolizumab | 200 mg/mL | Autoinjector |

**Psoriatic Arthritis**  
For the treatment of patients over 18 years of age who have active psoriatic arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindication to these agents is documented. One combination therapy of DMARD must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.  
*Request for coverage must be made by a specialist in rheumatology.*

**Ankylosing Spondylitis**  
For the treatment of patients with active ankylosing spondylitis who have failed to respond to an adequate trial of at least 3 different non-steroidal anti-inflammatory drugs (NSAIDs) and, in patients with peripheral joint involvement, have failed to respond to methotrexate or sulfasalazine.  
*Request for coverage must be made by a specialist in rheumatology.*
Psoriasis
For treatment of adult patients with severe plaque psoriasis presently with one or more of the following:
• Psoriasis Area and the Severity Index (PASI) ≥ 10
• Body Surface Area (BSA) > 10%
• Significant involvement of the face, hands feet or genital region
• Dermatology Life Quality Index (DLQI) > 10 AND
• Failure to respond to, contraindications to, intolerant of or unable to access methotrexate, cyclosporine and/or phototherapy.
Coverage will be approved initially for a maximum of 3 months. For continued coverage the physician must confirm the patient’s response to treatment and demonstration of treatment clinical benefits:
• ≥ 50% reduction in the PASI score with ≥ 5 point improvement in the DLQI
• ≥ 75% reduction in the PASI score
• ≥ 50% reduction in the BSA with significant improvement of the face, hands, feet or genital region.

Request for coverage must be made by a specialist in dermatology.

Psoriatic Arthritis
For the treatment of patients over 18 years of age who have active psoriatic arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARDs must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.
Ankylosing Spondylitis
For the treatment of patients with active ankylosing spondylitis who have failed to respond to an adequate trial of at least 3 different non-steroidal anti-inflammatory drugs (NSAIDs) and, in patients with peripheral joint involvement, have failed to respond to methotrexate or sulfasalazine.

Request for coverage must be made by a specialist in rheumatology.

| 02455102 02455110 | Taltz | ixekizumab | 80 mg/mL | Autoinjector Pre-filled Syringe |

Psoriasis
For treatment of adult patients with severe plaque psoriasis presently with one or more of the following:
- Psoriasis Area and the Severity Index (PASI) ≥ 10
- Body Surface Area (BSA) > 10%
- Significant involvement of the face, hands feet or genital region
- Dermatology Life Quality Index (DLQI) > 10 AND
- Failure to respond to, contraindications to, intolerant of or unable to access methotrexate, cyclosporine and/or phototherapy.

Coverage will be approved initially for a maximum of 3 months. For continued coverage the physician must confirm the patient’s response to treatment and demonstration of treatment clinical benefits:
- ≥ 50% reduction in the PASI score with ≥ 5 point improvement in the DLQI
- ≥ 75 % reduction in the PASI score
- ≥ 50% reduction in the BSA with significant improvement of the face, hands, feet or genital region.

Request for coverage must be made by a specialist in dermatology.

Psoriatic Arthritis
For treatment of patients over 18 years of age who have active psoriatic arthritis who have failed treatment with at least 3 DMARD therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented.

One combination therapy of DMARD’s must also be tried.

Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology
**Siliq**
brodalumab 210 mg/1.5 mL Injection

For treatment of adult patients with severe plaque psoriasis presently with one or more of the following:
- Psoriasis Area and the Severity Index (PASI) ≥ 10
- Body Surface Area (BSA) > 10%
- Significant involvement of the face, hands, feet or genital region
- Dermatology Life Quality Index (DLQI) > 10 AND
- Failure to respond to, contraindications to, intolerant of or unable to access methotrexate, cyclosporine and/or phototherapy.

Coverage will be approved initially for a maximum of 4 months. For continued coverage the physician must confirm the patient’s response to treatment and demonstration of treatment clinical benefits:
- ≥ 50% reduction in the PASI score with ≥ 5 point improvement in the DLQI
- ≥ 75% reduction in the PASI score
- ≥ 50% reduction in the BSA with significant improvement of the face, hands, feet or genital region.

*Request for coverage must be made by a specialist in dermatology*

---

**Skyrizi**
isankizumab 90 mg/mL Injection

For treatment of adult patients with severe plaque psoriasis presently with one or more of the following:
- Psoriasis Area and the Severity Index (PASI) ≥ 10
- Body Surface Area (BSA) > 10%
- Significant involvement of the face, hands, feet or genital region
- Dermatology Life Quality Index (DLQI) > 10 AND
- Failure to respond to, contraindications to, intolerant of or unable to access methotrexate, cyclosporine and/or phototherapy.

Coverage will be approved initially for a maximum of 4 months. For continued coverage the physician must confirm the patient’s response to treatment and demonstration of treatment clinical benefits:
- ≥ 50% reduction in the PASI score with ≥ 5 point improvement in the DLQI
- ≥ 75% reduction in the PASI score
- ≥ 50% reduction in the BSA with significant improvement of the face, hands, feet or genital region.

*Request for coverage must be made by a specialist in dermatology.*

Rheumatoid arthritis failing at least 2 disease modifying antirheumatic drugs (DMARDs), eg. gold, methotrexate (MTX), plaquenil, sulfasalazine, minocycline and doxycycline.

(a) Treatment of severe acne - refractory to birth control pills, topicals (vitamin A/acid gel, tretinoin), Accutane and antibiotics.
(b) Hirsutism not responding to standard therapy (e.g. birth control pills, spironolactone, metformin).

For the use in patients with HIV infection for the prevention and treatment of neutropenia to maintain a normal absolute neutrophil count (ANC).

**Grastofil or Nivestym will be the preferred filgrastim option for all filgrastim-naive patients. Preferred means the first filgrastim product to be considered for reimbursement for filgrastim-naive patients.**
For the treatment of patients:
(a) in place of vancomycin if there is a documented allergy to vancomycin; or
(b) as an alternative to vancomycin if a patient experiences a "severe adverse reaction" to vancomycin therapy; or
(c) treatment that results in the discontinuation of vancomycin;
(d) as an alternative to vancomycin if a patient experiences a 'severe intolerance' to vancomycin treatment that results in the discontinuation of vancomycin therapy; or
(e) for use in the event of vancomycin treatment failure.
In addition to the above, for use in prior Clostridium Difficile Infection (CDI) situations after other current CDI treatment options fail.

Updated: January 25, 2022
As add-on maintenance treatment for adult patients with severe eosinophilic asthma, if the following criteria are met:

**Initiation Criteria**
1. Patient must have a documented diagnosis of asthma.
2. Patient is inadequately controlled with high-dose inhaled corticosteroids, defined as greater or equal to 500 mcg of fluticasone propionate or equivalent daily, and one or more additional asthma controller(s) (e.g., long-acting beta agonists).
3. Patient has one of the following:
   3.1. blood eosinophil count of ≥ 300 cells/µL within the past 12 months AND has experienced two or more clinically significant asthma exacerbations in the past 12 months, or
   3.2. blood eosinophil count of ≥ 150 cells/µL AND is receiving maintenance treatment with oral corticosteroids (OCS).

**Administration Criteria**
1. Benralizumab should not be used in combination with other biologics used to treat asthma.
2. A baseline assessment of asthma symptom control using a validated asthma control questionnaire must be completed prior to initiation of benralizumab treatment.
3. Patients should be managed by a physician with expertise in treating asthma.

**Renewal Criteria**
1. The effects of treatment should be assessed every 12 months to determine whether reimbursement should continue.
2. Reimbursement of treatment should be discontinued if:
   2.1. the 12 month asthma control questionnaire score has not improved from baseline, when baseline represents the initiation of treatment, or
   2.2. the asthma control questionnaire score achieved after the first 12 months of therapy has not been maintained subsequently, or
   2.3. the number of clinically significant exacerbations has increased within the previous 12 months, or
   2.4. in patients on maintenance treatment with OCS, there has been no decrease in the OCS dose in the first 12 months of treatment, or
   2.5. in patients on maintenance treatment with OCS, the reduction in the dose of OCS achieved after the first 12 months of treatment is not maintained subsequently.
