Dear Colleague,

Please find attached the Summary of Communicable Diseases for the Month of July 2006. This report reflects the number of cases of reportable communicable diseases for which individuals in Manitoba tested positive\* during the month of July 2006.

### Communicable Diseases

In total, there were 396 new infections occurring across 30 communicable diseases\*\* (excluding sexually transmitted infections and HIV) in July 2006. The observed number of cases were within the expected range for most of the reported communicable diseases with the exception of Verotoxin producing *E. coli* (25 cases observed; expected range 2-18 cases), Encephalitis (1 case observed; expect 0 cases), and Methicillin Resistant *Staphylococcus Aureus* (163 cases observed; expected range 0-141 cases). The expected number of cases and accompanying range is based on the number of cases during June, July, and August 2001-2005. The greater-than-expected numbers of *E. coli* are in part due to an outbreak suspected to be related to the distribution of contaminated meat.

### Sexually Transmitted Infections & Blood-Borne Pathogens

There were 390 cases of sexually transmitted infections (chlamydia, gonorrhoea, and syphilis) in July: 272 cases of chlamydia (Ct), 79 cases of gonorrhoea (GC), and 39 GC-Ct co-infections; there were no reported cases of syphilis in July. Almost two-thirds (64%) of all GC and Ct cases in the province were reported among young adults between the ages of 15 and 24 years. More than half of all GC and Ct cases (55%) were reported for individuals living in the Winnipeg health region, and an additional 20% were from the Burntwood health region.

In July 24 individuals tested positive for hepatitis C, most of who were reported from the Winnipeg health region. The cases were fairly distributed between males and females, and two thirds of the cases were in the 30-49 year age groups. Ten Manitobans tested positive for HIV in July 2006.

\*Note: Data for the monthly summary are aggregated based on the earliest of: symptom onset date, specimen collection date, or report date. For the majority of cases, the date used will be the specimen collection date.

\*\*Note: The following communicable diseases are reportable to the Director of Communicable Disease Control for surveillance purposes, and are not reported out for public health follow-up:

ascariasis (ICD9: 127.0)

clostridium difficile (ICD9: 558.2)

leishmaniasis – unspecified (ICD9: 085.9)

methicillin or vancomycin resistant staphylococcus aureus (MRSA/VRSA)

penicillin-resistant streptococcus pneumoniae (ICD9: 481.9)

schistosomiasis (ICD9: 120)

streptococcus pneumoniae – other site (ICD9: 041.2)

strongyloides (ICD9: 127.2)

vancomycin resistant enterococci (VRE)

tuberculosis (ICD9: 013, 011, 010 – cases and contacts of tuberculosis are managed by the Provincial Tuberculosis Control Programme located at the Health Sciences Centre)

Cheers,

Dr. Carole Beaudoin

Epidemiologist, Communicable Diseases
