Dear Colleague,

Please find attached the **Summary of Communicable Diseases for the Month of September 2005**. This report reflects the number of cases of reportable communicable diseases for which individuals in Manitoba tested positive* during the month of September 2005.

**Communicable Diseases**
In total, there were 430 new infections occurring across 24 communicable diseases** (excluding sexually transmitted infections and HIV) in September 2005. The observed number of cases were within the expected range for most of the reported communicable diseases with the exception of Lyme Disease (3 cases observed; expected range = 0-1 cases), Methicillin resistant staphylococcus aureus (MRSA; 151 cases observed; expected range = 0-91 cases), Mumps (2 cases observed; expected range = 0-1 cases), and Yersinia Enterocolitica (5 cases observed; expected range = 0-1 cases. The expected number of cases and accompanying range is based on the number of cases during August, September, and October 2000-2004.

**Sexually Transmitted Infections & Blood-Borne Pathogens**
There were 415 cases of sexually transmitted infections (chlamydia, gonorrhoea, and syphilis) in September: 293 cases of chlamydia (Ct), 69 cases of gonorrhoea (Gc), 42 Gc-Ct co-infections, and 11 cases of syphilis. About 60% of all Gc and Ct cases in the province were reported among youth aged 15-24 years. About half (53.5%) of all Gc and Ct cases were reported for individuals living in the Winnipeg health region, and an additional 21.5% were from the Burntwood health region.

In September 29 individuals tested positive for hepatitis C (HCV), most (55.2%) of whom were reported from the Winnipeg health region. More than two-thirds (69%) of cases were reported among males, mostly in the 40-49 year age groups. Additionally, 13 individuals tested positive for HIV in September.
*Note: Data for the monthly summary are aggregated based on the earliest of: symptom onset date, specimen collection date, or report date. For the majority of cases, the date used will be the specimen collection date.

**Note: The following communicable diseases are reportable to the Director of Communicable Disease Control for surveillance purposes, and are not reported out for public health follow-up:

ascariasis (ICD9: 127.0)
clostridium difficile (ICD9: 558.2)
leishmaniasis – unspecified (ICD9: 085.9)
methicillin or vancomycin resistant staphylococcus aureus (MRSA/VRSA)
penicillin-resistant streptococcus pneumoniae (ICD9: 481.9)
schistosomiasis (ICD9: 120)
streptococcus pneumoniae – other site (ICD9: 041.2)
strongyloides (ICD9: 127.2)
toxoplasmosis (ICD9: 130.9)
tuberculosis (ICD9: 013, 011, 010 – cases and contacts of tuberculosis are managed by the Provincial Tuberculosis Control Programme located at the Health Sciences Centre)
vancomycin resistant enterococci (VRE)

Cheers,

Dr. Carole Beaudoin
Epidemiologist, Communicable Diseases
