• By Regional Health Authority (RHA)	48
9. Pneumococcal Vaccine Doses Administered by Provider Type	54
• Manitoba	54
• By Regional Health Authority (RHA)	55

1. Overview

The Manitoba Immunization Monitoring System (MIMS) is the source of the data in this report. These data reflect immunization service dates up to and including December 31, 2005 and entered into MIMS by April 7, 2006. Immunization records are derived from physician billing claims and from manual entry of public health-provided immunizations.

Of note is an improvement in data quality for First Nations/Tribal Council for the reports by provider location. In previous reports, these providers were, for the most part, captured under “unknown” location as geographic information was not entered. This year most of the doses administered and recorded by First Nations/Tribal Council providers appear as a line list in the RHA in which the doses were administered as location is now being recorded. These data reflect the provider type, not the client.

As per other MIMS annual reports, the following criteria are incorporated into the data analysis:

1. Immunization service dates are based on the calendar year January 1 to December 31, 2005, rather than the fiscal year.
2. Coverage rates by age reflect a client’s status on his/her birthday.
3. Coverage reports reflect doses a client has received from birth until his/her selected birthday. For example, coverage at age two selects all children who turn two years of age in the calendar year and assesses these children for recommended vaccines on their birthdays. Doses administered to children after each of their selected birthdays will not be reflected in the coverage report, except for influenza vaccine.
4. Analysis of coverage by continuously versus non-continuously enrolled clients. A client who is considered “continuous” has been registered for Manitoba Health benefits since birth; non-continuously enrolled clients have moved to Manitoba from another jurisdiction, or if born here have moved out of Manitoba and then back again. Note: Immunization coverage reports produced by the Manitoba Centre for Health Policy include only continuously enrolled clients.
5. Complete coverage for select ages (i.e., the client has received all the recommended doses of each antigen recommended for his/her age).
6. Coverage rate by select antigen in order to assess clients who may have received vaccines not available in Manitoba: of particular importance for clients who have moved into Manitoba from another country; also important for tracking coverage rates when the combination vaccines available in Manitoba change.
7. Coverage rate by community area (for Winnipeg RHA only) or by regional health district (all other RHAs). Regional health authorities will receive electronic copies of these data sets for their region only.
8. First Nations and Inuit Health Branch (FNIHB) versus non-FNIHB population, with this indicator based on client self-identification at the time of enrollment for Manitoba Health benefits (A-code). FNIHB estimates that this indicator represents approximately 65 per cent of the FNIHB population. Audits indicate that gaps exist between immunizations administered to FNIHB clients (as documented on paper records) versus those data entered into MIMS. Coverage rates for FNIHB clients are therefore, in general, likely higher than those generated using MIMS data.
9. Separate dosage by provider type reports from coverage reports. These reports reflect the volume of immunizations delivered by each provider type, based on provider RHA. Their usefulness relates to evaluating staffing or projecting workload by vaccine type. The 2005 report reflects vaccines administered from January 1 to December 31, 2005 and entered into the system by April 7, 2006.

Additional details on the timing and criteria for data inclusion and exclusion are provided in “Description of Criteria for MIMS Annual Reports” (see page 2).

2. Description of Criteria for MIMS Annual Reports:

MIMS Dataset Preparation (numerator)

- The MIMS dataset used is a monthly snapshot of the MIMS live database provided by Manitoba Health's Corporate and Provincial Program Support Branch. For annual reports the April snapshot following the end of the calendar year is used. As the MIMS dataset is dynamic, each monthly snapshot includes all previously entered data up to the time the output dataset is created.
- The MIMS data are linked to the Manitoba Health registry to access the municipality where the patient resides. This information is used with the MIMS patient postal code to generate the patient RHA. This corresponds to the methodology used to allocate geography in the denominator dataset.
- The MIMS dataset is queried for those records with a service date prior to the end of the calendar year and where the service date is not "00000000" (i.e., unknown).
- The calendar year and report date are appended to the dataset.
- Patient age is calculated as of his/her birthday within the calendar year.
- The health coverage status (i.e., continuous versus non-continuous coverage) is derived using the coverage date and cancel date from the current Manitoba Health registry.
- First Nations status is based on self-declaration by the individual at time of registration with Manitoba Health.

Population Dataset (denominator)

- The corporate Manitoba Health population dataset is used.
- The age of the individual is as of his/her birthday within the calendar year.
- The population used is based on the figure for June 1 within the calendar year.
- The health coverage status (i.e., continuous versus non-continuous coverage) is derived using the coverage date and cancel date from the current Manitoba Health registry.
- After 1995-1996, the geographical location of the individual is derived within the corporate system by the Corporate and Provincial Program Support Branch. It follows the same methodology as used for the MIMS dataset.
- First Nations status is based on self-declaration by the individual at time of registration with Manitoba Health, following the same methodology as for the MIMS dataset.

NOTE: MIMS geography is determined as of April following the report year; the population geography is determined as of June 1 during the report year. As a result, coverage rates are occasionally greater than 100 per cent.

Creation of Reports

1. Report 4.1 & 4.2 – Childhood Antigen Reports

- The MIMS subset is queried for the following criteria:
 - Age => 1, 2, 7, 11, 17 (only where age equals these ages, ex: for one-year-olds, MIMS is queried on the birth date of all children who turn one year of age within the calendar year).
 - Antigens => diphtheria, tetanus, pertussis, measles, mumps, rubella, polio, haemophilus influenzae type B (Hib), varicella, hepatitis B, influenza, meningococcal conjugate, pneumococcal conjugate (all tariffs associated with the antigens, currently and historically, are included).
- Immunizations administered throughout the child's lifetime up to and including his/her birthday are kept for coverage reports.
- The data are summarized by I.D. (scrambled PHIN), age, patient location and First Nations status, providing a count of services for each of the antigens for each individual. This allows an evaluation of complete versus incomplete immunizations, as recommended by the provincial schedule, per age group.
- This dataset is linked to the population data for the rate calculations. Rates are calculated as follows:

$$\text{Rate}/100 = \frac{\# \text{ of individuals with complete immunization}}{\# \text{ of individuals in population of same age}} \times 100$$

- Antigen-specific coverage calculations: A child must receive three doses of hepatitis B-containing vaccine to be counted in the HBV coverage data at any age. This is for information purposes only, as there is no provincial recommendation for HBV until grade 4.
- Measles coverage: a child must receive one dose of measles-containing vaccine by age two and two doses by age seven. As the requirement for mumps and rubella-containing vaccine is one dose in a lifetime, and MMR vaccine is the common source for two doses of measles antigen, mumps and rubella coverage rates are higher than measles from age seven and up.
- Hib doses are reflected in coverage for children at age one (three doses required), ages two and seven (four doses required). Hib is included for children at age 11 and 17 (four doses) for information only, as there is no provincial recommendation for Hib vaccine once children reach age 11. Hib is therefore not included in "complete for age" requirements for children after the age of seven (doses required = 0).

2. Report 4.3 – Coverage by Registration Status

- The MIMS dataset created for the childhood coverage reports is used to perform an evaluation of complete versus incomplete immunizations, as recommended by the provincial schedule, per age.
- The health coverage status (i.e., continuous versus non-continuous coverage) is derived using the coverage date and cancel date from the current Manitoba Health registry.
- This MIMS coverage status dataset is linked to the population coverage status data for the rate calculations. Rates are calculated as follows:

$$\text{Rate}/100 = \frac{\# \text{ of individuals}}{\# \text{ of individuals in population of same age}} \times 100$$

Doses Required to be “Complete for Age”

Antigen	Age				
	1	2	7	11	17
Tetanus	3	4	5	5	6
Diphtheria	3	4	5	5	6
Pertussis	3	4	5	5	5
Polio	2	3	3	3	3
Measles	0	1	2	2	2
Mumps	0	1	1	1	1
Rubella	0	1	1	1	1
HIB	3	4	4	0	0
HBV	0	0	0	3	3

NOTE: For Childhood Antigen and Complete for Age reports the criteria used to determine complete for age reflect the routine immunization schedule. Reports cannot accommodate clients who are “late starters” and therefore require fewer doses of specific antigens.

NOTE: PCV, MCV and V were added to the recommended Manitoba Infant & Childhood Immunization Schedule as of October, 2004. Complete for age reports will reflect PCV, MCV and V in the 2006 MIMS Annual Report. Coverage reports reflect doses administered of all antigens.

3. Report 5 – Childhood Vaccine Dosage Report

(Note: This is not a coverage rate report)

- The MIMS subset created for the childhood coverage reports is used, but only those immunizations that occurred within the calendar year are used.
- A query is performed for doses administered for each vaccine by provider type (physicians, Public Health and others), provider location and patient’s First Nations status.
- This report gives a count of the immunizations administered by the different types of providers.

4. Report 6 – Influenza and Pneumococcal Immunization Coverage

- The initial MIMS subset is queried for the following criteria:

Tariff = Influenza – 8791
Pneumococcal – 8961

- For influenza and pneumococcal polysaccharide immunizations, age data are converted to age groups: 0 to two years, three to 17 years, 18 to 64 years, under 65, under 65 high risk and over 65 years. Where a patient was under 65 and the reason variable is 2, the patient was classified as high risk.
- For influenza, only those immunizations administered during the calendar year are used for the report.
- For pneumococcal, the data are analyzed twice. The first round includes those immunizations administered during the calendar year. The second round includes all pneumococcal immunizations recorded over time as a cumulative coverage rate.
- A query is performed by I.D. (scrambled PHIN), age group, patient RHA, and First Nations status, providing a count of services for each of the vaccines by I.D.
- This dataset is linked to population data for the rate calculations. Rates are per 100 individuals. The same age groups are applied to the population data with the under 65 high-risk group defined as 11 per cent of the under 65 population.

5. Report 7 and 8 – Influenza and Pneumococcal Vaccine Doses Administered, by Provider Type

(Note: not a coverage rate report)

- The MIMS subset created for the influenza/pneumococcal coverage reports is used.
- A query is performed to obtain doses administered for each vaccine by provider type (physicians, Public Health, and others), reason for immunization, and First Nations status of the patient.

6. List of Abbreviations

Pop	Population
Diphth	Diphtheria
Flu	Influenza
Tet	Tetanus
Pert	Pertussis
HIB	Haemophilus influenzae type b
HBV	Hepatitis B
V	Varicella
MCV	Meningococcal conjugate
PCV	Pneumococcal conjugate
DaPTP	Diphtheria, acellular pertussis, tetanus, polio
DaPTP/HIB	Diphtheria, acellular pertussis, tetanus, polio and haemophilus influenzae type b
MMR	Measles, mumps, rubella
HEPA/B	Hepatitis A and B
TDaP	Tetanus, diphtheria, acellular pertussis

3. Acknowledgements:

The 2005 MIMS Report is our fourth annual report produced using a standardized methodology to allow year-to-year review of progress against provincial and national immunization coverage goals. With the introduction of a number of new immunization programs in 2004, the bar has been raised even higher to ensure Manitoba's children are immunized "complete for age." We hope the data contained in this report are useful to you in this pursuit.

As always, we welcome your comments and suggestions to make future reports more informative.

Special thanks to:

Penny Klassen, Betty Miller, Jill Chambers, Michelle Long, Tara Mawhinney, Greg Hammond, and of course the dedicated MIMS data entry staff and MIMS Steering Committee members.

Lauralea Klassen
MIMS Steering Committee Co-chair
Communicable Disease Control Unit, Manitoba Health

4. Childhood Immunization Coverage Reports, January 1 – December 31, 2005

4.1 Coverage by Antigen, by Patient Location

- Manitoba
- By RHA

Notes:

All vaccines containing each antigen were selected in this report for coverage. For example, “HBV” (hepatitis B vaccine) reflects all doses administered to clients, including those from hepatitis A/B combination vaccine (Twinrix). “Measles” reflects all doses administered to clients of any measles-containing vaccine.

Coverage is based on all doses administered to clients up to and including the selected birth date. Doses administered after the selected birth date will not be reflected in the report. However, these doses will be counted when the child reaches the next selected age milestone.

Rate per 100 children is the calculated coverage rate.

The population is selected based on the client’s address, and therefore may not reflect the number of doses administered by a particular provider. For data by provider type, see section 5, “Childhood Vaccine Doses Administered by Provider Type, by Provider Location.”

Childhood Immunization Coverage Data By Patient Location

4. Childhood Immunization Coverage Reports, January 1 – December 31, 2005

4.3 Coverage Based on Health Registration – Per cent Complete for Age

- Manitoba
- By RHA

Notes:

A client considered “Complete for Age” has received all of the doses of each vaccine recommended for his/her age. For vaccines considered in “Complete for Age” see section 2, “Description of Criteria for MIMS Annual Reports.”

Continuous Health Registration – reflects clients who have been registered with Manitoba Health for benefits, without interruption, since birth.

Non-continuous Health Registration – reflects clients who, if born in Manitoba moved out for a period and then returned, or clients who were born outside of Manitoba and moved into the province (interrupted health benefit registration).

Coverage rate calculation methods allow for rates that may exceed 100 per cent, particularly when populations are small. This is because the population (i.e., denominator) is assigned using June data within the calendar year, while the MIMS data are from April following the end of the calendar year.

5. Childhood Immunization Coverage Reports Complete for Age Based on Health Registration – Summary: 2002 to 2005

Notes:

The methodology for defining “complete for age” was refined in the 2004 MIMS annual report. For this reason, data presented here for 2002 and 2003 may not mirror the corresponding annual reports. This difference reflects the inclusion of the requirement for three doses of hepatitis B vaccine for children at age 11.

Childhood Immunization Coverage Report 2002-2005 Complete for Age (CFA) based on Health Registration

6. Childhood Vaccine Doses Administered, by Provider Type, by Provider Location, January 1 – December 31, 2005

- Manitoba
- By RHA

Notes:

These data reflect doses administered by each provider type, based on the provider's RHA. They cannot be used to calculate immunization coverage rates, as the providers do not have a particular population denominator to which they are assigned.

The dates for immunization service are from January 1 to December 31, 2005, as entered into MIMS by April 2006.

"First Nations/Tribal" provider indicates the provider type was entered into MIMS as First Nations; it does not reflect that the client has been identified as First Nations.

7. Influenza/Pneumococcal Immunization Coverage Reports, January 1 – December 31, 2005

7.1 By Patient Location

- Manitoba
- By RHA

Notes:

The population is selected using the client's address.

The "<65 high risk" population estimate (i.e., denominator) is based on a calculation of 11 per cent of the total under-65 population. The same estimate is used for both influenza and pneumococcal high-risk groups, although the target population is not identical. The "<65 high risk" numerator data are those doses identified as such via public health data entry in MIMS. These same doses are also included in the "all <65" doses and coverage calculations.

Influenza coverage reflects doses administered in the 2005 calendar year, with data entered by April 2006. Pneumococcal (2005) reflects doses administered in the 2005 calendar year, while pneumococcal (cumulative) reflects doses administered to unique clients from all previous years and including 2005.

Rate per 100 is the calculated coverage rate.

Influenza/Pneumococcal Immunization Coverage Report by First Nations Status

January 1 - December 31, 2005

	Influenza						Pneumococcal (2005)			Pneumococcal (Cumulative)		
	0-2	3-17	18-64	<65	<65	65+	<65	<65	65+	<65	<65	65+

8. Influenza Vaccine Doses Administered by Provider Type

- Manitoba
- By RHA

Notes:

These data reflect doses administered by each provider type, based on the provider's RHA. They cannot be used to calculate immunization coverage rates, as the providers do not have a particular population denominator to which they are assigned.

The dates for immunization service are from January 1 to December 31, 2005, as entered into the MIMS database by April 2006.

"First Nations/Tribal" provider indicates the provider type was entered into MIMS as First Nations; it does not reflect that the client has been identified as First Nations.

"Other providers" include facilities, primary care providers, private health care providers, pharmacies and other unknown providers.

9. Pneumococcal Vaccine Doses Administered by Provider Type

- Manitoba
- By RHA

Notes:

These data reflect doses administered by each provider type, based on the provider's RHA. They cannot be used to calculate immunization coverage rates, as the providers do not have a particular population denominator to which they are assigned.

The dates for immunization service are from January 1 to December 31, 2005, as entered into the MIMS database by April 2006.

"First Nations/Tribal" provider indicates the provider type was entered into MIMS as First Nations; it does not reflect that the client has been identified as First Nations.

"Other providers" include facilities, primary care providers, private health care providers, pharmacies and other unknown providers.
