INTRODUCTION
SAMPLE LAYOUTS

Criteria re “enclosed” and “indoor”

• Samples to assist in applying criteria re: enclosure of perimeter of outdoor eating and drinking areas.

• Wall opening criteria applies if there is a roof or other covering over more than 25% of the total floor area.

• If the roof or other covering is less than 25% of the total floor area, the area is considered to be outdoor regardless of how much of the perimeter is enclosed.
Step 1: the perimeter
This perimeter is 140 ft long. At least 70 ft (50%) of this must not be enclosed floor-to-roof.

Step 2: the floor-to-roof distance
This floor-to-roof distance is 8ft. At least 4 ft (50%) of its vertical face must be open.

Step 3: requirement calculation
1- This perimeter has 90 ft (64%) of its length not enclosed floor-to-roof.
2- This floor-to-roof distance has 5 ft (63%) of its vertical face open.

This layout would be considered to be outdoor.
Step 1: the perimeter
This perimeter is 150 ft long. At least 75 ft (50%) must not be enclosed floor-to-roof.

Step 2: the floor-to-roof distance
This floor-to-roof distance is 8 ft. At least 4 ft (50%) of its vertical face must be open.

Step 3: requirement calculation
1 - This perimeter has 75 ft (50%) of its length not enclosed floor-to-roof.
2 - This floor-to-roof distance has 4 ft (50%) of its vertical face open.

This layout would be considered to be outdoor.
Step 1: the perimeter
This perimeter is 140 ft long. At least 70 ft (50%) must not be enclosed floor-to-roof.

Step 2: the floor-to-roof distance
This floor-to-roof distance is 8 ft. At least 4 ft (50%) of its vertical face must be open.

Step 3: requirement calculation
1. This perimeter has 70 ft (50%) of its length not enclosed floor-to-roof.
2. This floor-to-roof distance has 5 ft (63%) of its vertical face open.

This layout would be considered to be outdoor.
Step 1: the perimeter
This perimeter is 140 ft long. At least 70 ft (50%) of this must not be enclosed floor-to-roof.

Step 2: the floor-to-roof distance
This floor-to-roof distance is 8 ft. At least 4 ft (50%) of its vertical face must be open.

Step 3: requirement calculation
1 - This perimeter has 50 ft (36%) of its length not enclosed floor-to-roof.
2 - This floor-to-roof distance has 5 ft (63%) of its vertical face open.

This layout would be considered enclosed.
Step 1: the perimeter
This perimeter is 140 ft long. At least 70 ft (50%) must not be enclosed floor-to-roof.

Step 2: the floor-to-roof distance
This floor-to-roof distance is 8 ft. At least 4 ft (50%) of its vertical face must be open.

Step 3: requirement calculation
1 - This perimeter has 90 ft (63%) of its length not enclosed floor-to-roof.
2 - This floor-to-roof distance has 3.5 ft (44%) of its vertical face open.

This layout would be considered enclosed.
Step 1: the perimeter
This perimeter is 144 ft long. At least 72 ft (50%) of this must not be enclosed floor-to-roof.

Step 2: the floor-to-roof
This floor-to-roof distance is 8 ft. At least 4 ft (50%) of its vertical face must be open.

Step 3: requirement calculation
1 - This perimeter has 69 ft (48%) of its length not enclosed floor-to-roof.
2 - This floor-to-roof distance has 5 ft (63%) of its vertical face open

This layout would be considered enclosed.
