

# REPORT OF ACTIVITIES 2010

## *A message from the Minister:*

**U**nderstanding Manitoba's geology is critical to finding and developing the mineral resources that help build and sustain the communities we live in. Geoscience also contributes to provincial land-use planning, water stewardship and public health, protection of the environment and management of natural hazards.

**T**his annual *Report of Activities* is one of many tools produced by the Manitoba Geological Survey to assist us in these efforts. It summarizes the Survey's geoscience investigations from the past year, including new field programs, new digital initiatives, and collaborative ventures with the federal government, universities, communities and the mineral exploration industry.

**T**he *Report of Activities* is released annually at our 'Manitoba Mining and Minerals Convention' where delegates can obtain a complimentary copy in print and on CD. The report is also available on our website for free download and for purchase through our Publication Sales.

**W**e hope the work presented in this report will assist your efforts, whether they are targeted to mineral exploration, geoscientific research or the welfare of lands and people.

A handwritten signature in black ink, appearing to read 'Dave Chomiak'. The signature is fluid and cursive.

Honourable Dave Chomiak  
Minister of Innovation, Energy and Mines
