

LEGEND

- Recent
Pleistocene
- Swamp deposits, etc.
- Glacial drift boulder clay, lake beds, etc.
- rock outcrops
rare or lacking
- Block-like plutonic intrusive rock of various composition
- Porphyritic gneissoid granite
- Complex of plutonic gneisses mainly acidic but with minor quantities of basic varieties
- Schists comprising metamorphosed basic lavas with small quantities of agglomerate acid lavas and sediments Metasediments and Metasandstone
- Geological boundary - established
- Geological boundary - approximate
- Strike and dip of foliation
- Glacial striae

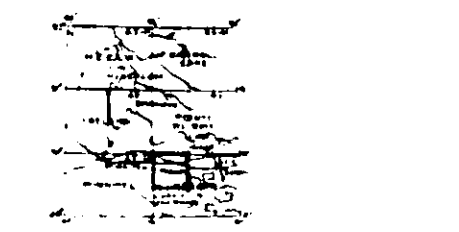

Geology by J.S. DeLury, 1937

Forest Reserve Boundary shown thus

MAP 37-4
BOUNDARY AREA
SOUTHEASTERN MANITOBA
Scale 2 miles to inch or 1:250,000

Revised by Survey B. M.A.N.E. Winnipeg September 1946
