- 6) Press soil into hole.
- 7) Fully water and water daily for the next 2 weeks.
- 8) Water couple of time per week after that.

## How to Plant and Care for Your Tree in 10 Easy Steps

STEP 1

1. Dig the hole 2 times wider and slightly deeper than the container the tree is in. Break-up soil with no clumps.

2. Place loose soil back into the hole so tree root ball at or just below soil surface.

3. Remove tree from container, loosen roots.

4. Place tree in hole with the root ball at or just below soil surface, keeping straight.

STEP 2 & 3

5. Scoop loose soil back into hole, packing as you add soil around the tree roots until 2/3 full.

6. Fill in remaining hole to create a saucer shaped cup and edge.

7. Pack soil again and water until soil just wet. Water again after 1 hour.

STEP 4

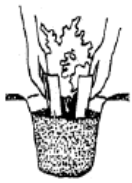

8. Water daily for first 2 weeks, until soil wet. If soil has settled, add more soil if needed around tree.

9. Water at least once per week until fall (more if very hot and dry weather).

10. Next 2 years water at least twice a month during the summer. Remove any weeds.
