INTRODUCTION:

The Manitoba Bureau of Statistics (MBS) has prepared this report as part of its economic statistics program. The purpose is to provide Manitoba-level information on the importance and impact of international merchandise trade.

This publication provides merchandise export and import statistics by country, country grouping, commodity and industry. The information is from Statistics Canada's International Trade Division.

MBS adjusts the value of exports for some commodities in its Manitoba Economic Accounts. These adjustments are undertaken to better reflect the value of the foreign export of these commodities to the provincial economy.

Users should be aware that the export data is on a "province of origin" basis, while the import data is on a "province of clearance" basis. Therefore, imports from other countries are not counted if they are cleared through custom ports in other provinces and then shipped to Manitoba (MBS would count these as interprovincial imports). This implies that the trade balances calculated for individual countries could overstate Manitoba's actual position.

As part of the 2017 World Customs Organization (WCO) amendments, a number of codes have been terminated and recoded. Updates at the 6-digit level are made every 5 years by the WCO, in order to reflect new international standards and trade patterns. While all commodity data presented in this report are based on the 4-digit level Harmonized System (HS) codes, the information presented may be affected by these changes.

All industry data presented in this report are based on the North American Industry Classification System (NAICS) 1997 and are derived from HS code values. The concordance file used in converting the commodity data into industry values is derived from Statistics Canada. With the emergence of HS 2017 codes, revisions to this concordance file have since been maintained by MBS. As a result, there may be discrepancies in the industry details within this report when compared to other industry-based data sources.

MBS has additional detailed information, which can be supplied to interested users on a cost recovery basis. Export/Import information that can be provided includes:

- i) individual commodities for specific countries.
- ii) individual commodities by country (volume and dollar value) at the 4, 6, 8, or 10 digit HS level.
- iii) commodities by country for specific industries or sectors.

NOTE TO USERS:

The data presented in this report has been derived from the most current estimates released by Statistics Canada's International Trade Division. Revisions for the 2021 calendar year have been incorporated in this report.

This report includes four historical tables (Tables 11 to 14). They provide the current export and import data by selected country and industry for the years 2018 to 2021.
