

4.2M Lane Widths

4.2.1M Through Lane Widths

4.2.1.3M Design Domain: Quantitative Aids

The TAC Subsection **4.2.1.3** is applicable to the Department's highways with the following substitution:

A universal through-lane width of 3.7 m is used for all classifications of roadways on rural roads.

The Department does not currently have standards for urban roads. However, the nominal through-lane width to be applied in urban work is also 3.7 m. Given the greater constraints presented by an urban setting, lesser through-lane widths may be considered. Such consideration should be analyzed on a case-by-case basis.
