Christine Hutlet
Chief Administrative Officer
Rural Municipality of Brokenhead
Box 490
Beausejour, Manitoba R0E 0C0

Dear Ms. Hutlet,

Re: Rural Municipality of Brokenhead – Garson/Tyndall – Wastewater Treatment Lagoon – Notice of Alteration

Proposed changes presented in the September 4, 2008 NoA include:

1. Altering the means of disposing of sludge that has accumulated at the old Community of Tyndall wastewater treatment lagoon located on NW 11-13-6EPM that is to be decommissioned. The original proposal was to dispose of the sludge at a waste disposal ground. This NoA proposes that it be placed on the inside dyke slopes of secondary cell No. 2 of the wastewater treatment lagoon.

2. Not requiring leveling of the site of the old Community of Tyndall wastewater treatment lagoon located on NW 11-13-6EPM to the original grade once the contents of its cells have been discharged or removed. It is understood that leaving the site in its current state is being requested by the Rural Municipality of Brokenhead in response to interest by an independent group to purchase the property and use the decommissioned cells as a reservoir(s) for purposes other than wastewater treatment and storage.

These alterations will not result in significant environmental effects and as such, are considered to be minor alterations pursuant to Section 14(2) of The Environment Act. Approval is hereby given to implement these minor alterations to the wastewater treatment lagoon design as described, subject to the limits, terms and conditions of Environment Act Licence No. 2646 R (attached).
This Licence has been revised from the previous Licence that was issued to the Rural Municipality of Brokenhead on April 21, 2004. The revisions include:

1. Adding mention of the NoA in the preamble;
2. Adjusting Clause 44 such that:
   a) sludge from the old Community of Tyndall wastewater treatment lagoon located on NW 11-13-6EPM is not required to be disposed of at a waste disposal ground but must be spread and incorporated to the uppermost 15 centimetres of the surface soils within the lined operating area of secondary cell No. 2 of the Rural Municipality of Brokenhead’s Garson-Tyndall wastewater treatment lagoon that will now be operating under Environment Act Licence No. 2646 R; and
   b) leveling of the site of the old Community of Tyndall wastewater treatment lagoon located on NW 11-13-6EPM is not a requirement of the Licence;
3. Adding Schedule “B”, a drawing identifying the cells of the lagoon, to the Licence; and
4. Rescinding Licence No. 2646.

In addition to the requirements of the enclosed Licence, please be informed that all other applicable federal, provincial and municipal regulations and by-laws must be complied with.

If you require any clarification of this letter or have any questions, please contact Robert Boswick of the Environmental Assessment and Licensing Branch at (204) 945-6030.

Yours truly,

Tracey Braun, M.Sc.
Director
Environment Act

Attachment

   John Irwin, Regional Director, Eastern Region – Manitoba Conservation

NOTE: Confirmation of Receipt of this Licence No. 2646 R (by the Licencee only) is required by the Director of Environmental Assessment and Licensing. Please acknowledge receipt by signing in the space provided below and faxing a copy back to the Department by September 24, 2008.

On behalf of the RM of Brokenhead

**A COPY OF THE LICENCE MUST BE KEPT ON SITE AT THE DEVELOPMENT AT ALL TIMES**
Licence No. / Licence nº 2646 R

Issue Date / Date de délivrance April 26, 2004

Revised: September 18, 2008

In accordance with The Environment Act (C.C.S.M. c. E125)
Conformément à la Loi sur l'environnement (C.P.L.M. c. E125)

Pursuant to Sections 11(1) and 14(2) / Conformément au Paragraph 11(1) et 14(2)

THIS LICENCE IS ISSUED TO: / CETTE LICENCE EST DONNÉE À:

RURAL MUNICIPALITY OF BROKENHEAD; "the Licencee" for the construction, operation and maintenance of the Development being wastewater collection systems, a wastewater treatment lagoon located on NW and SW 15–13–6 EPM to serve the Local Urban District of Garson-Tyndall and the Rural Municipality of Brokenhead, forcemain connections between the wastewater collection systems of the Local Urban District of Garson-Tyndall and the wastewater treatment lagoon and with discharge from the wastewater treatment lagoon to municipal drains that discharge into Devils Creek that discharges into the Red River, in accordance with the proposal filed under The Environment Act on March 25, 2002, subsequent information provided in letters and attachments dated September 19, 2002, January 10, 2003, and April 20, 2004, and in consideration of the December 2003 Manitoba Clean Environment Commission Report on Public Hearings, and the Notice of Alteration filed under The Environment Act on September 4, 2008, and subject to the following specifications, limits, terms and conditions:

DEFINITIONS

In this Licence,

"accredited laboratory" means an analytical facility accredited by the Standard Council of Canada (SCC), or accredited by another accrediting agency recognized by Manitoba Conservation to be equivalent to the SCC, or be able to demonstrate, upon request, that it has the quality assurance/quality control (QA/QC) procedures in place equivalent to

**A COPY OF THE LICENCE MUST BE KEPT ON SITE AT THE DEVELOPMENT AT ALL TIMES**
accreditation based on the international standard ISO/IEC 17025, or otherwise approved by the Director;

"affected area" means a geographical area excluding the property of the Development;

"approved" means approved by the Director or an assigned Environment Officer, in writing;

"appurtenances" means machinery, appliances, or auxiliary structures attached to a main structure to enable it to function, but not considered an integral part of it;

"as constructed drawings" means engineering drawings complete with all dimensions which indicate all features of the Development as it has actually been built;

"ASTM" means the American Society for Testing and Materials;

"bentonite" means specially formulated standard mill grade sodium bentonite conforming to American Petroleum Institute Specification 13-A;

"buffer" means a strip of land that is managed to reduce or eliminate the impacts of land use practices on sensitive areas or natural features;

"cut-off" means a vertical-side trench filled with compacted clay or a wall constructed from compacted clay;

"Director" means an employee so designated pursuant to the Environment Act;

"domestic wastewater" means wastewater derived principally from dwellings, business buildings, institutions, and which may or may not contain groundwater, surface water or storm water;

"effluent" means treated wastewater flowing or pumped out of the wastewater treatment lagoon;

"fecal coliform" means aerobic and facultative, Gram-negative, nonspore-forming, rod-shaped bacteria capable of growth at 44.5 °C, and associated with fecal matter of warm-blooded animals;

"five-day biochemical oxygen demand" means that part of the oxygen demand usually associated with biochemical oxidation of organic matter within 5 days at a temperature of 20°C;
"flooding" means the flowing of water onto lands, other than waterways, due to the overtopping of a waterway or waterways;

"forcemain" means a pressure pipe joining the pump discharge at a water or wastewater pumping station with a point of gravity flow;

"high water mark" means the line on the interior surface of the primary and secondary cells which is normally reached when the cell is at the maximum allowable liquid level or the line of the exterior of the perimeter dykes which is reached during local flooding;

"hydraulic conductivity" means the quantity of water that will flow through a unit cross-sectional area of a porous material per unit of time under a hydraulic gradient of 1.0;

"influent" means water, wastewater, or other liquid flowing into a wastewater treatment facility;

"in-situ" means on the site;

"low water mark" means the line on the interior surface of the primary and secondary cells which is normally reached when the cell is discharged;

"MPN Index" means the most probable number of coliform organisms in a given volume of wastewater which, in accordance with statistical theory, would yield the observed test result with the greatest frequency;

"noise nuisance" means a continuous or repeated noise in an affected area, which is offensive, obnoxious, troublesome, annoying, unpleasant, or disagreeable to a person:
   a) residing in an affected area;
   b) working in an affected area; or
   c) present at a location in an affected area which is normally open to the members of the public;

if the noise
   d) is the subject of at least 5 written complaints, received by the Director in a form satisfactory to the Director, and within a 90 day period, from 5 different persons falling within clauses a), b), or c), who do not live in the same household; or
   e) is the subject of at least one written complaint, received by the Director in a form satisfactory to the Director, from a person falling within clauses a), b) or c), and the Director is of the opinion that if the noise had occurred in a more densely populated area there would have been at least 5 written complaints received within a 90-day period, from 5 different persons who do not live in the same household;
"odour nuisance" means a continuous or repeated odour, smell or aroma in an affected area which is offensive, obnoxious, troublesome, annoying, unpleasant or disagreeable to a person:
   a) residing in an affected area;
   b) working in an affected area; or
   c) present at a location in an affected area which is normally open to members of the public;
if the odour, smell or aroma
   d) is the subject of at least 5 written complaints received by the Director in a form satisfactory to the Director and within a 90 day period, and from 5 different persons falling within clauses a), b) or c) who do not live in the same household; or
   e) is the subject of at least one written complaint, received by the Director in a form satisfactory to the Director, from a person falling within clauses a), b) or c) and the Director is of the opinion that if the odour, smell or aroma had occurred in a more densely populated area there would have been at least 5 written complaints received within a 90 day period from 5 different persons who do not live in the same household;

"potable water" means water that does not contain objectionable pollution, contamination, minerals, or infective agents and is considered satisfactory for domestic consumption in accordance with the most recent version of the Guidelines for Canadian Drinking Water Quality;

"primary cell" means the first in a series of cells of the wastewater treatment lagoon system and which is the cell that receives the untreated wastewater;

"reject water" means water from the water treatment processes that will not be used for potable water;

"riprap" means small, broken stones or boulders placed compactly or irregularly on dykes or similar embankments for protection of earth surfaces against wave action or current;

"SAR" means sodium adsorption ratio;

"secondary cell" means a cell of the wastewater treatment lagoon system which is the cell that receives partially treated wastewater from the primary cell;

"septage" means the sludge produced in individual on-site wastewater disposal systems such as septic tanks;

"sewage" means household and commercial wastewater that contains human waste;
Rural Municipality of Brokenhead  
Licence No. 2646 R  
Page 5 of 14

"sludge" means accumulated solid material containing large amounts of entrained water, which has separated from wastewater during processing;

"sludge solids" means solids in sludge;

"Sodium adsorption ratio" means the dimensionless value where:

\[
\text{SAR} = \frac{0.044 \times \text{Sodium concentration}}{\sqrt{(0.025 \times \text{Calcium concentration}) + (0.041 \times \text{Magnesium concentration})}}.
\]

"Standard Methods for the Examination of Water and Wastewater" means the most recent edition of Standard Methods for the Examination of Water and Wastewater published jointly by the American Public Health Association, the American Waterworks Association and the Water Environment Federation;

"total coliform" means a group of aerobic and facultative anaerobic, Gram-negative, nonspore-forming, rod-shaped bacteria, that ferment lactose with gas and acid formation within 48 hours at 35 °C, and inhabit predominantly the intestines of man or animals, but are occasionally found elsewhere and include the sub-group of fecal coliform bacteria;

"wastewater" means the spent or used water of a community or industry which contains dissolved and suspended matter;

"wastewater collection system" means the sewer and pumping system used for the collection and conveyance of domestic, commercial and industrial wastewater;

"wastewater treatment lagoon" means an impoundment into which wastewater is discharged for storage and treatment by natural oxidation; and

"water treatment plant" means the central facility for the production of potable water; it contains all treatment processes and appurtenances exclusive of the distribution system.

**GENERAL TERMS AND CONDITIONS**

This Section of the Licence contains requirements intended to provide guidance to the Licencsee in implementing practices to ensure that the environment is maintained in such a manner as to sustain a high quality of life, including social and economic development, recreation and leisure for present and future Manitobans.
1. The Licencee shall direct all wastewater generated within the Local Urban District of Garson-Tyndall and the surrounding areas toward the wastewater treatment lagoon or other approved sewage treatment facilities.

2. The Licencee shall direct all reject water from the Local Urban District of Garson-Tyndall water treatment plant toward the wastewater treatment lagoon.

3. In addition to any of the limits, terms and conditions specified in this Licence, the Licencee shall, upon the request of the Director:
   a) sample, monitor, analyze and/or investigate specific areas of concern regarding any segment, component or aspect of pollutant storage, containment, treatment, handling, disposal or emission systems, for such pollutants or ambient quality, aquatic toxicity, leachate characteristics and discharge or emission rates, for such duration and at such frequencies as may be specified;
   b) determine the environmental impact associated with the release of any pollutant(s) from the Development; or
   c) provide the Director, within such time as may be specified, with such reports, drawings, specifications, analytical data, descriptions of sampling and analytical procedures being used, bioassay data, flow rate measurements and such other information as may from time to time be requested.

4. The Licencee shall, unless otherwise specified in this Licence:
   a) carry out all preservations and analyses on liquid samples in accordance with the methods prescribed in "Standard Methods for the Examination of Water and Wastewater" or in accordance with an equivalent analytical methodology approved by the Director;
   b) have all analytical determinations undertaken by an accredited laboratory; and
   c) report the results to the Director, in writing or in a format acceptable to the Director, within 60 days of the samples being taken.

5. The Licencee shall not cause or permit a noise nuisance to be created as a result of the construction, operation or alteration of the Development, and shall take such steps as the Director may require to eliminate or mitigate a noise nuisance.

6. The Licencee shall not cause or permit an odour nuisance to be created as a result of the construction, operation or alteration of the Development, and shall take such steps as the Director may require to eliminate or mitigate an odour nuisance.
7. The Licencee shall, during construction and operation of the Development, report spills of fuels or other contaminants to an Environment Officer in accordance with the requirements of *Manitoba Regulation 439/87* respecting *Environmental Accident Reporting* or any future amendment thereof.

8. The Licencee shall comply with the provisions of the Department of Fisheries and Oceans Canada/Manitoba Natural Resources publication, "*Manitoba Stream Crossing Guidelines for the Protection of Fish and Fish Habitat*" (May, 1996).

9. The Licencee shall complete a legal survey of the lands on which the Development will be located and provide two copies of the survey reports to the Director prior to commencement of construction.

**SPECIFICATIONS, LIMITS, TERMS AND CONDITIONS**

10. The Licencee shall notify the assigned Environment Officer not less than two weeks prior to beginning construction of the Development. The notification shall include the intended starting date(s) of construction and the name(s) of the contractor(s) responsible for the construction.

11. The Licencee shall construct the wastewater treatment lagoon such that a buffer zone measuring at least 30 metres in width is provided between the outside toe of the external dykes of the wastewater treatment lagoon and the adjacent and nearest property line of the right-of-way associated with Devils Creek.

12. The Licencee shall not install the forcemain piping within the right-of-ways of Devils Creek except where the route of the forcemain crosses the right-of-ways of Devils Creek.

13. The Licencee shall:
   a) conduct all ditch related work activities during no flow or dry conditions and not during the April 1 to June 15 fish spawning and incubation period.
   b) not construct the wastewater treatment lagoon or wastewater collection system during periods of heavy rain;
   c) place and/or isolate all dredged and construction material where it will not erode into any watercourse;
   d) implement effective long-term sediment and erosion control measures to prevent soil-laden runoff, and/or silt from entering any watercourse during construction and until vegetation is established;
   e) routinely inspect all erosion and sediment control structures and immediately complete any necessary maintenance or repair; and
f) maintain streambeds and banks of watercourses associated with lagoon operation and repair eroded and physically unstable streambeds and banks associated with the wastewater treatment lagoon, the discharge route and associated watercourses such that they are able to perform the operations for which they were designed and constructed.

14. The Licencee shall, during construction of the Development, operate, maintain and store all materials and equipment in a manner that prevents any deleterious substances (fuel, oil, grease, hydraulic fluids, coolant, paint, uncured concrete and concrete wash water, etc.) from entering the wastewater treatment lagoon, the discharge route and associated watercourses.

15. The Licencee shall construct waterway crossings by augering, tunneling or boring. Open cut waterway crossings shall not be made unless prior consultation with Manitoba Conservation staff and Department of Fisheries and Oceans staff has occurred and the prior written approval of the Director has been obtained. This condition applies on continuously flowing watercourses at all times, and on intermittent streams and artificial drainage channels only when flow is occurring.

16. The Licencee shall revegetate soil exposed during the construction of the Development with native or introduced grasses or legumes. Native species shall be used to revegetate areas where native species existed prior to construction. Revegetation is not required for pipelines installed by chain trenching or ploughing on previously disturbed ground including road allowances or on the floors of the wastewater treatment lagoon.

17. The Licencee shall not alter local drainage patterns by the construction of the Development, including inflows and outflows from small wetlands adjacent to the routes of pipelines.

18. The Licencee shall, where open cut stream crossing techniques are used on intermittent waterways and artificial drainage channels, minimize disturbance to riparian areas and restore the bottom and banks of the waterways to their original elevations and shapes.

19. The Licencee shall separate and replace topsoil from backhoe and trenching operations in accordance with the methodology described in Figures 1, 2 and 3 attached to this Licence. This requirement is not applicable where the topsoil has been previously disturbed due to the construction of roads or drains.

20. The Licencee shall, prior to the construction of the dykes of the wastewater treatment lagoon:
   a) remove all organic topsoil from the area where the dykes will be constructed; or
b) remove all organic material for a depth of 0.3 metres and a width of 3.0 metres from the area where the liner will be constructed.

21. The Licencee shall construct and maintain the cells of the wastewater treatment lagoon with continuous liners, including cutoffs, under all interior surfaces of the cells in accordance with the following specifications:
   a) the liners shall be made of clay;
   b) the liners shall be at least one metre in thickness;
   c) the liners shall have a hydraulic conductivity of $1 \times 10^{-7}$ centimetres per second or less at all locations; and
   d) the liners shall be constructed to an elevation of 2.5 metres above the floor elevation of the primary cell and of the secondary cells.

22. The Licencee shall not discharge effluent from the wastewater treatment lagoon:
   a) where the organic content of the effluent, as indicated by the five day biochemical oxygen demand, is in excess of 30 milligrams per litre;
   b) where the fecal coliform content of the effluent, as indicated by the MPN index, is in excess of 200 per 100 millilitres of sample;
   c) where the total coliform content of the effluent, as indicated by the MPN index, is in excess of 1500 per 100 millilitres of sample;
   d) between the 1st day of November of any year and the 15th day of June of the following year;
   e) when flooding from any cause is occurring along the effluent drainage route; or
   f) when such a discharge would cause or contribute to flooding in or along the effluent drainage route.

23. The Licencee shall operate and maintain the wastewater treatment lagoon in such a manner that:
   a) the organic loading on each primary cell, as indicated by the five-day biochemical oxygen demand, is not in excess of 56 kilograms per hectare per day; and
   b) the depth of liquid in the primary cell and the secondary cells does not exceed 1.5 metres.

24. The Licencee shall install and maintain a fence around the wastewater treatment lagoon to limit access. The fence shall be a minimum of 1.2 meters high and have a locking gate, which shall be locked at all times except to allow access to the wastewater treatment lagoon.
25. The Licencee shall construct and maintain an all-weather access road and a sewage dumping station for delivery of truck handled sewage to the wastewater treatment lagoon. The dumping facility shall have a surface splash ramp with a smooth hard surface that can be easily washed free of solids.

26. The Licencee shall not discharge septage into the wastewater treatment lagoon between the 15\textsuperscript{th} day of October of any year and the 1\textsuperscript{st} day of June of the following year.

27. The Licencee shall, if in the opinion of the Director, significant erosion of the interior surfaces of the dykes occurs, repair the dyke and install riprap as necessary. The riprap shall be placed on the interior dyke surfaces from 0.6 metres above the high water mark to at least 0.6 metres below the low water mark to protect the dykes from wave action.

28. The Licencee shall provide and maintain a grass cover on the dykes of the wastewater treatment lagoon and shall regulate the growth of the vegetation so that the height of the vegetation does not exceed 0.3 metres on all dykes.

29. The Licencee shall annually remove by mechanical methods all reeds, rushes and trees located above the low water mark in every cell of the wastewater treatment lagoon.

30. The Licencee shall implement an ongoing program to remove burrowing animals from the site of the wastewater treatment lagoon.

31. The Licencee shall locate all fuel storage and equipment servicing areas established for the construction and operation of the Development a minimum distance of 100 metres from any waterbody, and shall comply with the requirements of Manitoba Regulation 188/2001 respecting Storage and Handling of Petroleum Products and Allied Products Regulation or any future amendment thereof.

32. The Licencee shall actively participate in any future watershed-based management study, plan and/or nutrient reduction program, approved by the Director, for Devils Creek, the Red River and Lake Winnipeg and/or associated waterways and watersheds.
MONITORING AND REPORTING

33. The Licencee shall prior to each effluent discharge campaign from the wastewater treatment lagoon obtain grab samples of the treated wastewater and have them analyzed for:
   a) the organic content as indicated by the five day biochemical oxygen demand and expressed as milligrams per litre;
   b) the fecal coliform content as indicated by the MPN index and expressed as MPN per 100 millilitres per sample; and
   c) the total coliform content as indicated by the MPN index and expressed as MPN per 100 millilitres per sample.

34. The Licencee shall, for the wastewater treatment lagoon:
   a) during each year maintain records of:
      i) wastewater sample dates;
      ii) original copies of laboratory analytical results of the sampled wastewater; and
      iii) effluent discharge dates;
   b) make the records being maintained pursuant to sub-Clause 34 a) of this Licence available to an Environment Officer upon request; and
   c) keep the maintained records of any one calendar year available for inspection for a period of three years following the respective calendar year in which they were recorded.

35. The Licencee shall maintain a record of all septage, sewage and wastewater hauled to the wastewater treatment lagoon, including the number of loads on a daily and weekly basis, the volume of each load, the name of the hauler, and the source of the contents of each load according to the type of waste and the name and location of each property serviced. The Licencee shall submit an annual report of all the waste hauling information to the Director by the 15th of January of the following year.

36. The Licencee shall conduct a monitoring program for the Sodium Adsorption Ratio (SAR) of effluent, prior to each discharge from the wastewater treatment lagoon and the reject water retention pond, for a minimum of three years.

37. The Licencee shall, not less than 30 days after the results of the sample analysis are available, submit to the Director the results of the monitoring program carried out pursuant to Clause 36.

38. The Licencee shall, if requested by the Director, propose a plan, for approval by the Director, to reduce the SAR levels to comply with the SAR levels of Manitoba Conservation Report 2002-11, Manitoba Water Quality Standards, Objectives, and Guidelines.
39. The Licencee shall, in case of physical or mechanical breakdown of the wastewater collection and/or treatment system:
   a) notify the Director immediately;
   b) identify the repairs required to the wastewater collection and/or treatment system;
   c) undertake all repairs to minimize unauthorized discharges of wastewater; and
   d) complete the repairs in accordance with any written instructions of the Director.

40. The Licencee shall arrange with the designated Environment Officer a mutually acceptable time and date for any required soil sampling between the 15th day of May and the 15th day of October of any year.

41. The Licencee shall take and test undisturbed soil samples, in accordance with Schedule "A" attached to this Licence, from the liner of the wastewater treatment lagoon; the number and location of samples and test methods to be specified by the designated Environment Officer up to a maximum of 30 samples.

42. The Licencee shall, not less than 2 weeks before the wastewater treatment lagoon is placed in operation, submit to the Director the results of the tests carried out pursuant to Clause 41 of this Licence.

DECOMMISSIONING OF COMMUNITY OF TYNDALL WASTEWATER TREATMENT LAGOON

43. The Licencee shall, after placing the wastewater treatment lagoon located on NW and SW 15–13–6 EPM into operation, prevent any additional wastewater or septage from being discharged into the wastewater treatment lagoon associated with the Community of Tyndall located on NW 11–13–6 EPM in the Rural Municipality of Brokenhead, Manitoba.

44. The Licencee shall, unless otherwise approved by the Director, within one year of placing the wastewater treatment lagoon located on NW and SW 15–13–6 EPM into operation:
   a) remove the wastewater from the Community of Tyndall wastewater treatment lagoon located on NW 11–13–6 EPM and transport it to the new wastewater treatment lagoon located on NW and SW 15–13–6 EPM in the Rural Municipality of Brokenhead, Manitoba or discharge treated effluent in accordance with Environment Act Licence No. 941;
   b) remove all of the sludge from the Community of Tyndall wastewater treatment lagoon located on NW 11–13–6 EPM;
Rural Municipality of Brokenhead
Licence No. 2646 R
Page 13 of 14

c) transport all of the sludge from the Community of Tyndall wastewater treatment lagoon, located on NW 11–13–6 EPM, in containers so as to prevent the lose of sludge and associated liquid, to the new wastewater treatment lagoon located on NW and SW 15-13-6 EPM in the Rural Municipality of Brokenhead, Manitoba; and
d) dispose of all of the sludge from the Community of Tyndall wastewater treatment lagoon, located on NW 11–13–6 EPM, by spreading and incorporating the sludge into the uppermost 15 centimetres of soil, in the lined operating area of secondary cell No. 2 of the wastewater treatment lagoon located on NW and SW 15-13-6 EPM as shown on Schedule “B” to this Licence.

45. The Licencee shall ensure that any continuing use of the site shall be in accordance with the by-laws of the Rural Municipality of Brokenhead, and other Federal and Provincial regulations as applicable.

POST CONSTRUCTION ASSESSMENT OF SURFACE DRAINAGE IMPACTS

46. The Licencee shall, after the completion of construction of the Development;
a) inspect the sites where work occurred to evaluate the effectiveness of erosion control and sediment control measures and the physical stability of roadside ditches and watercourse crossings; and
b) where the inspections identify any problems, immediately take appropriate action to rectify the situation and advise the Department of Fisheries and Oceans – Winnipeg District of the situation and any corrective measures taken.

AS CONSTRUCTED DRAWINGS

47. The Licencee shall:
a) prepare updated "as constructed drawings" for the Development and shall label the drawings "As Constructed"; and
b) provide to the Director, on or before 30th day of November, 2005, three sets of "as constructed drawings" of the Development.
Rural Municipality of Brokenhead  
Licence No. 2646 R  
Page 14 of 14

REVIEW AND REVOCATION

A. Licence No. 2646 is hereby rescinded.

B. Licence No. 941 is rescinded upon approved commissioning of the new wastewater treatment lagoon and decommissioning of the wastewater treatment lagoon located on NW 11–13–6 EPM.

C. If, in the opinion of the Director, the Licencee has exceeded or is exceeding or has or is failing to meet the specifications, limits, terms, or conditions set out in this Licence, the Director may, temporarily or permanently, revoke this Licence.

D. If the Licencee has not commenced construction of the Development within three years of the date of this Licence, the Licence is revoked.

E. If, in the opinion of the Director, new evidence warrants a change in the specifications, limits, terms or conditions of this Licence, the Director may require the filing of a new proposal pursuant to Section 11 of The Environment Act.

Tracey Braun, M.Sc.  
Director  
Environment Act

FILE: 4766.00
Schedule "A" to Environment Act Licence No. 2646 R

Soil Sampling:

1. The Licencee shall provide a drilling rig, acceptable to the designated Environment Officer, to extract soil samples from the liner which is not placed or found at the surface of the lagoon structure. This includes all wastewater treatment lagoons constructed with clay cutoffs at the interior base of the dyke or with a clay cutoff in the centre of the dyke. The drill rig shall have the capacity to drill to the maximum depth of the clay cutoff plus an additional 2 metres. The drill rig shall be equipped with both standard and hollow stem augers. The minimum hole diameter shall be 5 inches.

2. For lagoon liners placed or found at the surface of the lagoon structure, the Licencee shall provide a machine, acceptable to the designated Environment Officer, capable of pressing a sampling tube into the liner in a straight line motion along the centre axis line of the sample tube and without sideways movement.

3. Soil samples shall be collected and shipped in accordance with ASTM Standard D 1587 (Standard Practice for Thin-Walled Tube Sampling of Soils), D 4220 (Standard Practice for Preserving and Transporting Soil Samples) and D 3550 (Standard Practice for Ring-Lines Barrel Sampling of Soils). Thin-walled tubes shall meet the stated requirements including length, inside clearance ratio and corrosion protection. An adequate venting area shall be provided through the sampling head.

4. At the time of sample collection, the designated Environment Officer shall advise the Licencee as to the soil testing method that must be used on each sample. The oedometer method may be used for a sample were the Environment Officer determines that the soil sample is taken from an undisturbed clay soil which has not been remoulded and which is homogeneous and unweathered. The triaxial test shall be used for all samples taken from disturbed and remoulded soils or from non homogenous and weathered soils.

5. The Licencee shall provide a report on the collection of soil samples to the designated Environment Officer and to the laboratory technician which includes but is not limited to: a plot plan indicating sample location, depth or elevation of sample, length of advance of the sample tube length of soil sample contained in the tube after its advancement, the soil test method specified by the Environment Officer for each soil sample and all necessary instructions from the site engineer to the laboratory technician.

6. All drill and sample holes shall be sealed with bentonite pellets after the field drilling and sampling has been completed.
Soil Testing Methods:

1. Triaxial Test Method
   b) Soil specimens shall have a minimum diameter of 70 mm (2.75 inches) and a minimum height of 70 mm (2.75 inches). The soil specimens shall be selected from a section of the soil sample which contains the most porous material based on a visual inspection. The hydraulic gradient shall not exceed 30 during sample preparation and testing. Swelling of the soil specimen should be controlled to adjust for: the amount of compaction measured during sample collection and extraction from the tube and the depth or elevation of the sample. The effective stress used during saturation or consolidation of the sample shall not exceed 40 kPa (5.7 psi) or the specific stress level, that is expected in the field location where the sample was taken, which ever is greater.
   c) The complete laboratory report, as outlined in ASTM D 5084, shall be supplied for each soil sample collected in the field.

2. Oedometer Test Method
   a) The soil samples shall be tested for hydraulic conductivity using ASTM D 2435 (Standard Test Method for One-Dimensional Consolidation Properties of Soils).
   b) Soil specimens shall have a minimum diameter of 50 mm (2 inches) and a minimum height of 20 mm (0.8 inches). The soil specimens shall be selected from a section of the soil sample which contains the most porous material based on a visual inspection. The soil specimen shall be taken from an undisturbed soil sample. The soil specimen shall be completely saturated.
   c) The complete laboratory report, as outlined in ASTM D 2435, shall be supplied for each soil sample collected in the field.
