Subject: RM of Macdonald water treatment plant alteration 3487.00

Hi Ken and Robyn,

I wanted to share a few comments that we received from your notice of alteration and request for some additional information on the human health impacts. Would you be able to identify the proximity of the nearest residence(s) and describe the potential effects of the project on human health and mitigation strategies if applicable (e.g., noise, air quality, traffic, etc.)? I understand that the air quality was briefly discussed.

The TAC member(s) also shared the following comments for your information:

- Permit to Construct or Alter a Public Water System for the Office of Drinking Water (ODW) will have to be submitted
- Construction should follow Manitoba Water Services Board (MWSB) standards

Thanks,

Jay Mak, M.Sc., P.Eng.

Hi Ken and Robyn,

Could you please describe the expected quantity and concentrate of the settling pond discharge from this proposal? Please include the current discharge plan and the expected impact in the receiving water body (e.g., La Salle River).

If you have any questions, please let me know.

Thanks,

Jay Mak
