Community Engagement Summary Sandy Bay Ojibway First Nation

Date	Methods of Engagement	
February 21, 2008	Letter requesting an Introductory Bipole III Meeting with Chief and Council Letter	
August 24, 2009	Letter indicating that Manitoba Hydro had selected a series of alternative route options and would	
	like to hold a community open house in Sandy Bay Ojibway First Nation	
January 15, 2010	Proposed agenda for traditional Knowledge workshop	
February 5, 2010	Letter to Premier Selinger regarding concerns about consultation for Bipole III	
February 17, 2010	Letter received from Premier Selinger to Chief Meeches	
October 18, 2010	Letter indicating that Manitoba Hydro had selected a preliminary preferred route for Bipole III	
October 29, 2010	Round Four meeting with Sandy Bay Ojibway First Nation	
October 29, 2010	Letter with copies of all the letters from Manitoba Hydro to Sandy Bay Ojibway First Nation	
November 17, 2010	Round Four community open house with Sandy Bay Ojibway First Nation	
March 3, 2011	Letter replying to question regarding farmer land owner compensation	
November 23, 2011	Letter indicating that Manitoba Hydro has now selected a preferred route for the proposed Bipole III	
	Transmission Project.	
June 18, 2012	Letter including Environmental Impact Statement	
April 11, 2013	Sandy Bay Section 35 Final Report	
August 1, 2013	Letter following up from Section 35 meeting	
October 30, 2013	Environmental Protection Program Meeting	
July 16, 2014	Manitoba Hydro sent a letter including the notes from the October 30, 2013 EPP meeting to the	
	community. The letter included a link to documents that may be of interest to the community	

Including: Transmission Access Management Plan, Bipole III Project Environmental Protection Plan, Bipole III Transmission Line Construction Environmental Protection Plan (CEnvPP) Segment C1 Culture and Heritage Resource Protection Plan. The letter also included a copy of the sample questionnaire that Manitoba Hydro uses to assist with developing a community appropriate protocol for the Culture and Heritage Resource Protection Plan. A copy of the Access Management brochure was also enclosed.

Category	Summary of Community Feedback	Response and/or Mitigation	EPP Component
Access	Concerns that the line will increase outsider access	Natural terrain conditions, remoteness and private property restrictions are expected to limit traffic on the Bipole III Transmission Project ROW at all times of the year but, in particular, during the non-frozen ground period. Opportunities will increase during the frozen ground period and although anticipated traffic levels are expected to be low, the following strategies have been identified and are currently being developed for inclusion in the Access Management Plan to minimize potential access opportunities to the ROW and to address issues of safety and system reliability: Education and communication (e.g., public, stakeholders, between maintenance crews and resource users, etc.); Strategies to retain desirable species on the ROW that create beneficial habitat and limit line of sight; Timing windows for operations and maintenance activities particularly in environmentally sensitive sites; Maintenance of riparian buffers and wildlife corridors during the operations and maintenance (O & M) phase; Case by case assessment and evaluation, in conjunction with Manitoba Conservation and Water Stewardship, of applications for ROW use for industrial and recreational purposes; Assessment of access for decommissioning if not required for O & M.	Access Management Plan

Category	Summary of Community Feedback	Response and/or Mitigation	EPP Component
Aquifers and Artesan Waters	Concerns about potential leaching into Aquifers and Artesan Waters	Surface and groundwater quality will not be degraded whether or not they contain fish utilizing: buffers and setbacks, erosion and sedimentation control measures and stream crossing measures	Construction Environmental Protection Plan
Clearing	Concerns that clearing of trees and vegetation may compound overland flooding.	Manitoba Hydro has done modeling of watershed areas and determined that the removal of vegetation in the ROW will not have a measurable effect on overland flooding.	······
EMFs	Concerns about the potential effect from EMFs.	Based on reviews by national and international scientific agencies there are no known adverse health effects associated with EMF from AC or DC transmission lines.	
Hunting	Concerns regarding the impacts on hunting lands.	Hunting and fishing are regulated by Manitoba Conservation and Water Stewardship and as such the monitoring of the impacts from those activities fall under their jurisdiction. Manitoba Hydro (MH) will restrict firearms in project locations to ensure project personnel safety. MH's Safe Work Procedures will apply to Bipole III and any firearms allowed in project locations will be subject to those procedures. Given the safety concerns with firearms in camps or on active construction sites, firearms and the ability to engage in hunting activities while on site will be restricted. Project personnel will not be allowed to hunt within the vicinity of construction camps or sites. Effects of the ROW on furbearers and big game are being	

Category	Summary of Community Feedback	Response and/or Mitigation	EPP Component
9		monitored as part of the Biophysical Monitoring Plan. Results of this monitoring will be shared with the community.	
Land Use	Concerns about potential effects on the Langruth Wildlife Management Area (WMA) and the Alonsa and Lakeview Community Pastures (CP), which are used by Sandy Bay.	The Bipole route is located east of the road allowance that borders the Langruth WMA so it will not directly affect the WMA. The route is not located within the Alonsa CP it is located within 1,600 metres of the Alonsa CP for a distance of 5,370 meters.	
Soil	Concerns about potential effects on soil degradation due to clearing.	 Environmental protection measures related to soil, clearing and related activities have been developed: Where sensitive sites have been identified existing low growth vegetation such as grasses, forbs and shrubs will be maintained to the extent possible. Disturbance to roots and adjacent soils will be minimized. Selective clearing will be carried out in erosion prone areas. Hand clearing or other low disturbance methods may be employed to minimize soil disturbance. Environmentally sensitive areas located adjacent to watercourses or located on rugged terrain will be cleared by low ground disturbance methods (i.e hand clearing on steep slopes). 	Environmental Protection Plan

Category	Summary of Community Feedback	Response and/or Mitigation	EPP Component
		 Trees within established buffer zones will be selectively cleared using methods that cause the least impact. Low growth vegetation such as grasses and shrubs within buffer zones will not be cleared. Where possible, construction vehicles will be wide-tracked or equipped with high floatation tires to minimize rutting and limit damage and compaction to surface soils. The Construction Supervisor/Site Manager will issue a stop work order if extreme wet weather or insufficient frost conditions causes soil damage from rutting or soil erosion which results in the deposit of sediment in adjacent waterbodies. Specified clearing methods will be carried out in a manner that minimizes disturbance to the existing organic soil layer. 	
Vegetation Management	Concerned that herbicide use may affect the health of plants, wildlife and humans.	Negative impacts on wildlife and human health are not expected from the limited application of pesticides used during the Bipole III operational period. Any application of herbicides or pesticides applications will be done by a certified applicator and according to product label directions.	

Community Engagement Summary Sapotaweyak Cree Nation

Date	Methods of Engagement	
February 21, 2008	Letter from Manitoba Hydro requesting an introductory Bipole III meeting with Chief and Council	
April 14, 2008	Introductory meeting with leadership	
August 15, 2008	Letter from Manitoba Hydro providing information about regional introductory public open	
	houses and suggesting that a community open house be planned in the community	
February 19, 2009	Round 2 Community Open House	
May 26, 2009	Letter from Manitoba Hydro requesting participation in the ATK process	
August 18, 2009	Letter indicating that Manitoba Hydro had selected a series of alternative route options and	
	would like to hold a community open house in the community or Indicating that Manitoba Hydro	
	had selected alternative routes for Bipole III	
January 28, 2010	Round 3 Community Open House	
July 27, 2010	Letter indicating that Manitoba Hydro had selected a preliminary preferred route for Bipole III	
December 15, 2010	Round 4 Community Open House with Sapotaweyak Cree Nation	
January 21, 2011	Letter informing community that Hydro is proceeding through the final planning phases	
January 26, 2011	Round 4 Leadership Meeting with Sapotaweyak Cree Nation	
February 1, 2012	Letter from Manitoba Hydro requesting that the USB flash drive and/or Biophysical Technical	
	Report CD 1 and 2 that the community received regarding the Bipole III EIS be returned for	
	exchange with the proper information. The letter noted that the Terrestrial Invertebrates,	
	Amphibians and Reptiles and the Terrestrial Ecosystems and Vegetation Technical Reports	
	inadvertently contained specific location information for some rare and/or endangered plant	

	and reptile species, therefore must be returned. The USB flash drive and/or Biophysical	
	Technical Report CD 1 and 2 were not returned and no response was received to the letter.	
August 14, 2012	Meeting to discuss the community's concerns regarding the Project	
September 19, 2012	Follow-up letter from Manitoba Hydro after the August 14, 2012 meeting	
February 12, 2013	Sapotaweyak Cree Nation leadership meeting	
March 2013	Traditional Knowledge Project: Land Use and Occupancy Memory Mapping & Interviews Related	
	to Bi-pole III Preferred Corridor and Environmental Management Plan Report submitted to	
	Manitoba Hydro	
April 10, 2013	Follow-up meeting with Sapotaweyak Cree Nation to discuss their TK report	
April 19, 2013	Follow-up letter to Chief Genaille with the landowner brochure enclosed as requested at the	
	April 10, 2013 meeting	
May 29, 2013	Meeting with Sapotaweyak Cree Nation (SCN) to discuss their draft proposal to conduct an	
	enhanced EPP process	
June 27, 2013	Meeting to discuss SCN's proposal to conduct an enhanced EPP process	
July 5, 2013	Response from Manitoba Hydro to SCN's proposal to conduct an enhanced EPP process	
April 22, 2014	Letter from Manitoba Hydro requesting an EPP meeting in the community. The letter included a	
	CD with documents that may be of interest to the community including:	
	Transmission Access Management Plan,	
	Bipole III Project Environmental Protection Plan,	
	 Bipole III Transmission Line Construction Environmental Protection Plan (CEnvPP) Segment 	
	C1 and N4	
	Culture and Heritage Resource Protection Plan.	
	The letter also included a copy of the sample questionnaire that Manitoba Hydro uses to assist	
	with developing a community appropriate protocol for the Culture and Heritage Resource	
	Protection Plan. A copy of the Access Management brochure was also enclosed.	

Category	Summary of Information	Response and/or Mitigation	EPP Component
Birds	Concerns about the impact on animals and birds from the proposed construction and operation of Bipole III.	Those areas not avoided through the routing process and still determined to be areas of potential high use by migrating birds were identified as areas where bird diverters should be placed on transmission lines. Through both the routing process and the placement of bird diverters at sensitive sites, it is thought that bird-wire strikes can be minimized to the extent practicable. Monitoring during operation will be used to evaluate the effects predictions.	Biophysical Monitoring Plan
Harvesting	Concerns about potential impacts on harvesting, hunting, fishing, travelling on their treaty lands and waters.	Manitoba Hydro has identified the following mitigation measures to reduce the effects on traditional food: Construction and site decommissioning activities in northern Manitoba will be carried out during the winter months; • Where construction and site decommissioning activities do not occur during winter months, disturbances will be minimized in areas of plants used by Aboriginal people as identified through the ATK process; • Whenever possible, existing trails, roads and cut lines will be used as access	15

Category	Summary of Information	Response and/or Mitigation	EPP Component
Lategory		 Hunting and fishing by Project personnel will be prohibited within Project footprint, and firearms restricted in work camps; Manitoba Hydro will work with individual communities that have identified important resource use sites that are in close proximity to the Project Site/Footprint to minimize potential effects; Where demand exists, cleared timber that is not otherwise practically salvageable, will be made available to communities for fuelwood. Manitoba Conservation is responsible for timber allocation on Crown lands. Within those areas under FMLs, the Licensee has the first right to all merchantable timber under license. Manitoba Hydro will endeavour to salvage merchantable where practical to do so; and An Access Management Plan has been developed and shared with the

Community Engagement Summary Treaty 2

Date	Methods of Engagement	
January 13, 2013	Email to Treaty 2 representatives asking if they would be interested in having an EPP meeting	
April 10, 2013	Foilow-up letter from Manitoba Hydro to Treaty 2	
August 16, 2013	Letter from Manitoba Hydro providing updates regarding various Bipole III Project opportunities including the EPP process	
September 9, 2013	Letter from Manitoba Hydro informing Treaty 2 of additional Project updates and opportunities	
September 19, 2013	Letter from Treaty 2 in response to Manitoba Hydro's September 9, 2013 letter	
September 27, 2013	Letter from Manitoba Hydro in response to Treaty 2's September 19, 2013 letter	
October 8, 2013	Letter from Manitoba Hydro in response to Treaty 2 regarding additional Bipole III Project opportunities	
October 31, 2013	Email to Treaty 2 representatives, including potential dates for an EPP meeting and a draft EPP presentation for their review	
November 28, 2013	Email from Treaty 2 indicating they will inform us of the date of their next meeting at which time an EPP meeting may occur	
February 20, 2014	Foilow-up email from Manitoba Hydro to Treaty 2 asking if they were able to determine a date for an EPP meeting	
February 25, 2014	Email from Treaty 2 indicating they will inform us of the date of their next meeting at which time an EPP can occur	
April 22, 2014	Letter from Manitoba Hydro requesting a meeting with the community to review the EPP including a link to EPP documents	

Date	Methods of Engagement	
May 14, 2014	Email from Treaty 2 to Manitoba Hydro indicating that they had not received the EPP letter from	
	April 22 2014 and requesting that future correspondence be sent electronically	
May 20, 2014	Letter from Treaty 2 in response to Manitoba Hydro's EPP letter from April 22, 2014 indicating	
	that Treaty 2 First Nations take the position that each First Nation protects its interests with	
	respect to the reserve lands set aside for its exclusive use and occupation, whereas all matters	
	related to the balance of Treaty 2 Territory are collective interests that are to be dealt with	
	collectively.	
June 10, 2014	Letter from Manitoba Hydro in response to Treaty 2's May 20, 2014 letter	
June 25, 2014	Email response from Treaty 2 to Manitoba Hydro's June 10, 2014 letter requesting a meeting	
	and proposing potential dates to discuss how to move forward with respect to the EPP	
July 7, 2014	Email response from Manitoba Hydro to Treaty 2 proposing a meeting on July 23 to discuss	
	moving forward	
	Email response from Treaty 2 indicating that July 23 is no longer feasible and recommending	
	other potential dates	
	Email response from Manitoba Hydro suggesting July 29 for a meeting date	
	Email response from Treaty 2 confirming July 29 as the next meeting date	

During previous discussions with Treaty 2 First Nation, Manitoba Hydro did not note any environmental concerns.

Community Engagement Summary Spence Lake Community Council

Date	Methods of Engagement	
February 21, 2008	Letter from Manitoba Hydro requesting an Introductory Bipoie III meeting with Leadership	
March 27, 2008	Fax from Spence Lake Community Council confirming the meeting	
April 10, 2008	Introductory meeting with leadership	
August 15, 2008	Letter from Manitoba Hydro providing information about regional introductory public open	
60	houses and suggesting that a community open house be planned in the community	
October 27, 2008	Round 2 Community Open House	
May 26, 2009	Letter from Manitoba Hydro requesting participation in the ATK process	
August 24, 2009	Letter indicating that Manitoba Hydro had selected a series of alternative route options and	
	would like to hold a community open house	
November 16, 2009	Round 3 Community Open House	
July 27, 2010	Letter indicating that Manitoba Hydro had selected a preliminary preferred route for Bipole III	
September 30, 2010	Round 4 Community Open House	
December 8, 2010	Follow-up letter from Manitoba Hydro informing the community of the preliminary preferred	
	route	
November 23, 2011	Letter indicating that Manitoba Hydro has now selected a preferred route for the proposed	
	Bipole III Transmission Project	
May 22, 2013	Fax from Manitoba Hydro to Spence Lake regarding setting up a potential EPP meeting	
July 17, 2013	EPP meeting in Spence Lake	
Juiy 16, 2014	Letter from Manitoba Hydro to Spence Lake including the notes from the July 17, 2013 EPP	

meeting to the community. The letter included a link to documents that may be of interest to the community including:

- Transmission Access Management Plan,
- Bipole III Project Environmental Protection Pian,
- Bipole III Transmission Line Construction Environmental Protection Plan (CEnvPP) Segment
 C1
- Culture and Heritage Resource Protection Plan.

The letter also included a copy of the sample questionnaire that Manitoba Hydro uses to assist with developing a community appropriate protocol for the Culture and Heritage Resource Protection Plan. A copy of the Access Management brochure was also enclosed.

Category	Summary of Information	Response and/or Mitigation	EPP Component
Access	Community representatives	Manitoba Hydro representatives indicated	
	asked if roads for construction	there is an Access Management Plan and	
	will be taken out.	Access Routing. Once the lines are built,	
		Manitoba Hydro wili need continued access	
		to Angie Towers so those access points will	
		likely stay, but will likely be allowed to	
		overgrow until they are needed. Others will	
		be decommissioned, and an attempt will be	
		made to let foliage come back naturally.	
		Manitoba Hydro is trying to avoid creating	
		opportunities for ATV access, etc.	
Beavers	There was a question about how	Manitoba Hydro representatives indicated	
	beaver dams will be approached.	dams will be opened up if necessary, but	
		provincial requirements will be followed.	
Birds	Community representatives	Bird nests will be left undisturbed during the	14
	asked how birds' nests would be	breeding period although may be relocated	
	accommodated.	due to safety concerns if they are located in	
		the towers.	
EMFs	Concerns re: EMFs	Based on reviews by national and	
	A STATE OF THE STA	international scientific agencies there are no	
		known adverse heaith effects associated with	
		EMF from ac or dc transmission lines.	

Category	Summary of Information	Response and/or Mitigation	EPP Component
Sensitive Site	Community representatives	Manitoba Hydro representatives asked if	•
	indicated that, years ago, some	there are any specific sites the community	
	residents were buried on a	has concerns about, and explained how	
	corner of their own land. Some	historical sites are dealt with, per the	
	of those burial locations may be	Heritage Resources Act. Manitoba Hydro	
	found during Project	representatives also noted protocols are	
	construction. Also, one resident	being developed for cultural and heritage	
	had, ail his life, seen a bird he	resources, if interested communities wish to	
	was told was supposed to be	identify a contact person.	
	extinct around a lake.	Manitoba Hydro representatives encouraged	
		community representatives to let Manitoba	
		Hydro know about similar sensitive	
		information.	
		Manitoba Hydro representatives aiso	
		discussed adaptive management strategies;	
		mitigation measures; and the ability to adjust	
		if mitigation measures are not working as	
		planned.

		wildlife corridors during the operations and	
		maintenance (O & M) phase;	

Category	Summary of Information	Response and/or Mitigation	EPP Component
		 Case by case assessment and evaluation, in conjunction with Manitoba Conservation and Water Stewardship, of applications for ROW use for industrial and recreational purposes; Assessment of access for decommissioning if not required for O & M. 	.5
Comment	Believes that the project will have a destructive affect, killing plant and animal species. Individual is unsure how to prevent this sort of damage from happening.	All construction activities will be monitored by a Manitoba Hydro environmental inspector to ensure compliance with the Environment Act licence and the Environmental Protection Plan.	Construction Environmental Monitoring Plan
EMFs	Concern regarding the effects of EMFs and their connection with health problems.	Based on reviews by national and international scientific agencies there are no known adverse health effects associated with EMF from ac or dc transmission lines.	
Erosion	Concerns regarding the erosion at river crossings. If the line crosses Red Deer River, how this would affect the fish and waterfowl.	Erosion and sediment control plans will be required by the contractors working on the construction site in areas that may be susceptible to erosion or sediment loading.	Construction Environmental Monitoring Plan
Forestry	Comment: a 66 metre ROW removes a large amount of lumber.	Where demand exists, cleared timber that is not otherwise practically salvageable, will be made available to communities for fuelwood. Manitoba Conservation is responsible for timber allocation on Crown lands. Within	#8

Category	Summary of Information	Response and/or Mitigation	EPP Component
		those areas under FMLs, the Licensee has the first right to all merchantable timber under license. Manitoba Hydro will endeavour to	
		salvage merchantable timber where practical to do so.	15
Noise	Concerned that noise emitted by the hydro line may scare off animals from the area.	Not all wiidlife species are sensitive to the low hum of power lines which, under certain weather conditions, can be noticeable to people. Based on experience in previous projects, it appears unlikely that line noise results in any significant effects to wildlife. Anecdotal information from transmission line construction workers and trail cameras on the ROW suggest transmission line noise has not deterred caribou, moose and other animals from feeding along transmission line rights of way. The Wuskwatim Trapping Pilot Study and ongoing Caribou GPS coilar monitoring of the Wuskwatim ROW further demonstrate the continued use of the ROWs once in operation.	Biophysical Monitoring Plan
Trapping	Interest regarding the Trapper Compensation Policy.	Manitoba Hydro has a Trappers Notification and Compensation Policy that compensates trappers for disturbances while clearing and constructing transmission lines greater than 115kV in capacity. In the case of the Bipole III	Socio-Economic Monitoring Pian

Date	Methods of Engagement
December 7, 2010	Round Four Community Open House in Wuskwi Sipihk First Nation
December 17, 2010	Fax from Manitoba Hydro with attached ATK documents
January 24, 2011	Letter sent by Wuskwi Sipihk First Nation containing the layout for the projected costs for the upcoming Traditional Knowledge Interviews
June 28, 2012	Letter from Manitoba Hydro including a copy of the Environmental Impact Statement
December 10, 2012	Leadership meeting with Wuskwi Sipihk First Nation regarding the route adjustments
January 23, 2013	Community Open House in Wuskwi Sipihk First Nation
February 1, 2013	Manitoba Hydro received the Wuskwi Sipihk Traditional Land Use and Occupancy Report Final Report
April 22, 2014	 Letter from Manitoba Hydro requesting an EPP meeting in the community. The letter included a CD with documents that may be of interest to the community including: Transmission Access Management Plan, Bipole III Project Environmental Protection Plan, Bipole III Transmission Line Construction Environmental Protection Plan (CEnvPP) Segment C1 and N4 Cuiture and Heritage Resource Protection Plan. The letter also included a copy of the sample questionnaire that Manitoba Hydro uses to assist with developing a community appropriate protocol for the Culture and Heritage Resource Protection Plan. A copy of the Access Management brochure was also enclosed.
June 3, 2014	EPP meeting in Wuskwi Sipihk First Nation

	important mineral source for game animals, and which we do not want disturbed.	Manitoba Hydro can incorporate into the EnvPPs.		
Spawning	Concern re: impacts to spawning areas.	Although no in-stream activities are planned, if they were required, they would be conducted during a timing window of least risk to fish and fish habitat. Timing works to avoid sensitive life history periods or life stages is an effective means of mitigating adverse effects. Riparian vegetated buffers at 30 metre are applied to water courses. There are setbacks for tower placement and fueling of equipment.	Biophysical Monitoring Plan	
Trapping	Interest in Trappers Compensation Policy; felt that this initiative should be open for negotiations and feel that CDI should be in place for as long as the line is there.	Manitoba Hydro has a Trappers Notification and Compensation Policy that compensates trappers for disturbances while clearing and constructing transmission lines greater than 115kV in capacity. In the case of the Bipole III Transmission Project, the implementation of the Policy is underway and will include discussions with individual registered trappers and users of Open Trapping Zones.	Socio-Economic Monitoring Plan	
Vegetation Management	Other animals, such as elk, deer, moose and duck are no longer hunted for fear of chemical contamination.	Manitoba Hydro will consider non-chemical vegetation management in clearly identified sensitive sites that contain plants of importance to resource harvesters.	Vegetation Management Plan, Biophysical Monitoring Plan

		 Case by case assessment and evaluation, in conjunction with Manitoba Conservation and Water Stewardship, of applications for ROW use for industrial and recreational purposes; Assessment of access for decommissioning if not required for O & M. 	
Clearing	Suggest that prior to the clearing area, knowledgeable local people are hired to transplant important species to new areas.	Manitoba Hydro plans to hold an EPP workshop with the community that includes mapping to identify sensitive sites where plants that are of importance to the community are located. Manitoba Hydro will consider nonchemical vegetation management in those sites and relocation of species at risk if tower foundation conflict. Winter clearing is the primary mitigation measure to mitigate the disturbance to herbs and grasses.	Vegetation Management Plan
Cumulative	Concerns re: cumulative effects of logging and Hydro activity (loss of forests)	There are some residual effects of operation that include: habitat alteration and fragmentation from creation of the right-of-way, improved access to new areas for hunters and predators, bird line-strikes, noise and potential disturbance from lines, maintenance vehicles and equipment. These residual effects have the potential to combine with similar effects from other	121

_		projects and activities in the area, including	
		activities associated with forestry, mineral	
		exploration, and other Manitoba Hydro	
		developments, as previously discussed in	
		relation to construction activities.	
		Once the Project is built and in operation, the	
		contribution of Bipole III to a large workforce	
		presence and related issues will decrease	
		significantly. Similarly, the disturbance	
		effects on wildlife will decrease with the end	
		of construction. Access and residual effects	
		of increased hunting and predation on	
		wildlife will remain during operation and will	
		be monitored and adaptive management	
		implemented if it is found that there are	
		measurable effects on wildlife populations or	
		resource uses.	
EMFs	Concerns re: the electromagnetic	Based on reviews by national and	
	frequency emissions from the	international scientific agencies there are no	
	lines. Concerns re: impacts of	known adverse health effects associated with	
	EMFs on both humans and	EMF from ac or dc transmission lines.

Firewood Many people collect firewood theat their homes.		Where demand exists, cleared timber that is not otherwise practically salvageable, will be made available to communities for fuelwood. Manitoba Conservation is responsible for timber allocation on Crown lands. Within those areas under FMLs, the Licensee has the first right to all merchantable timber under license. Manitoba Hydro will endeavour to salvage merchantable timber where practical to do so.	Vegetation Management Plan	
Moose	Comments were made regarding low moose populations in the area.	One of the main considerations in determining the route was the avoidance of important wildlife areas and intact forest (core communities), which included known high density moose areas (Duck Mountains and Porcupine Hills) and high quality habitat. The Bipole III ROW is not expected to have an effect on moose movement or habitat utilization on or near the ROW. General mitigation measures include undertaking preconstruction surveys and the development of site specific prescriptions such as: the establishment of buffers (wildlife corridors), timing of construction, reducing	Biophysical Monitoring Plan

Trapping	Concerns from trappers re: lack of proper compensation especially from previous projects.	Manitoba Hydro has a Trappers Notification and Compensation Policy that compensates trappers for disturbances while clearing and constructing transmission lines greater than 115kV in capacity. Biophysical and Socio-Economic Monitoring Plans developed with the community will attempt to address these concerns. Manitoba Hydro is also developing a trapping monitoring program for the Bipole III Transmission Project.	Biophysical Monitoring Plan, Socio-Economic Monitoring Plan	
Trapping	Concerns re: trapping impacts and compensation for the Shoal/Red Deer Trapping zone.	Manitoba Hydro will work with The Manitoba Trappers Association to put on educational youth trapping programs in communities that are near the Bipole III transmission line.	Biophysical Monitoring Plan	
Vegetation management	Concern re: the use of herbicides for vegetation management.	Manitoba Hydro held an EPP workshop with the community that included mapping to identify sensitive sites that contain plants that are of importance to the community. Manitoba Hydro will consider non-chemical vegetation management in those sites. There will be specific clearing in these sites to reduce disturbance to plants.	Vegetation Management Plan	
Wild meats	Concern re: the effect that the project will have on wildlife in the area as it is a major source of food for the community.	Effects of the Project will be monitored through a Biophysical Monitoring Plan. Results of this monitoring will be shared with the community.	Biophysical Monitoring Plan
