Subject: Project 6 - Information Request
Date: March 20, 2020 3:30:36 PM

Hello,

The public and Technical Advisory Committee comments received related to the Environmental Impact Statement for Project 6 - All Season Road Linking Manto Sipi Cree Nation, Bunibonibee Cree Nation and God's Lake First Nation have been reviewed.

Based on the TAC comments, the following information is requested for clarification:

1. Differing values were stated in the EIS for the area of wetlands affected by the project footprint. Section 6.2.5.1.2 states: "Only approximately 3.6 km² of the Project Footprint consists of wetland vegetation", yet Table 6.6 indicates the project footprint contains 16.6 km² of wetlands. How should these figures be interpreted?
2. Given the significant depth of peat at the sample locations, did the predicted effects of the project on greenhouse gas emissions take into consideration the disturbance of peat for the roadway?
3. The "Environmental Protection Procedures 13 Heritage Resources March 2018 Revision" state that specific areas where heritage or cultural resources of interest are suspected of being present, such as along major waterways at crossings, shall be inspected prior to the start of construction to confirm potential presence and extent. Clarification on who would be conducting this inspection is requested.

Thank you,

Elise Dagdick
