

Campground Tips

- Help prevent the spread of aquatic invasive species. Always “Clean, Drain, Dry and Dispose” when using watercraft or water-related equipment.
- Build no fires except in a designated firepit or use a camp stove. Before leaving make sure your fire is completely out.
- Please! Do not litter.
- Be sensitive to wildlife. Bears can be dangerous and should not be fed. Food must be stored away from your campsite, preferably in a locked vehicle, to avoid attracting hungry animals. Do not store food in your tent.
- The use of insect repellent will add to your comfort.
- Learn to recognize and avoid poisonous plants such as poison ivy.
- In case of injury or illness contact a Campground Attendant or Park Patrol Officer. They can assist you to reach medical help.
- Canoeists and hikers travelling in backcountry areas should advise a friend of their intended destination and anticipated length of trip.
- Backcountry camping is only allowed at designated campsites.
- It is illegal to use or transport elm firewood.
- Moving firewood can spread harmful invasive species and destroy our forests. Protect Manitoba’s trees. Don’t move firewood.

Iskwasum Landing Campground

- The sheltered waters of Iskwasum Lake provide excellent walleye and pike fishing

Situated on a widening of the Grass River, Iskwasum allows water access both upstream to Iskwasum Lake and downstream to Louck’s Lake and east to Louck’s Falls. Iskwasum Lake is dotted with many islands, home to some of the oldest trees in Grass River Provincial Park. It’s sheltered water provides excellent walleye and pike fishing. Louck’s Lake is also renowned for its fishing.

Campers at Iskwasum enjoy well-treed basic sites, solar powered water treatment, a solar heated gravity flow shower, a playground, horseshoes and an open green space. They also have access to the Karst Spring Self-Guided Trail, a 3.2 kilometre (return) trail leading to a scenic karst spring. Karst Springs is located half-way around the trail. The stream of water surges out of a sedimentary rock cliff of the Manitoba

Lowlands and flows into the Precambrian Shield’s Grass River. Interpretive signs along the trail provide additional information about the two vast geological regions of the Manitoba Lowlands and the Precambrian Shield and the spring that joins them. Allow two hours for walking and observation on this moderately strenuous trail.

Since the boreal forest is not homogenous or static, it provides constantly changing habitats or homes for different wildlife species from insects to woodland caribou. Look for red neck grebes in the river, bald eagles and loons on the lakes, and gray jays (whiskeyjacks) in the campground.
