

The Drinking Water Safety Act Self Assessment or Qualified Person Checklist Revised: September 18, 2018

Sustainable Development

Section 1: Owner Information

Owner Water System	
Operator Water System	
Owner Mailing Address	
Town/ City	Province Postal Code
Email	Phone/ Cell
Section 2: Water Syst	em Information
Public Water S	ystem (PWS) PWS Code # (i.e. 123.00)
Semi-Public Water Sy	stem (SPWS) SPWS Code # (i.e. 1000.00)
Operating License #	Seasonal? Yes No N/A
Section 3: Assessor I	nformation (please fill this out even if Self Assessment)
Name	
Company	

Email Phone/ Cell

Section 4: Certification

The information contained in this report is complete and accurate to the best of my knowledge.

Signature of Owner or Owner's Representative

Date

Personal information is collected under the authority of The Drinking Water Safety Act and its pursuant regulations, and is used to issue permits and licenses, and for enforcement purposes. Information collected is protected by the privacy provisions of The Freedom of Information and Protection of Privacy Act. If you have any questions, contact the Access & Privacy Coordinator, 200 Saulteaux Crescent, Box 85, Winnipeg MB, R3J 3W3.

Schematic or Flow Diagram: Attachment/s	Schematic or Flow Diagra	m: 🔤 A	Attachment/s	

Please attach a schematic or flow diagram of your water system, only for the raw water intake, wet wells, storage ponds, pumphouse, and water treatment plant.

Distribution system maps are <u>not</u> required.

If you are physically mailing a hand-drawn hardcopy to the Office of Drinking Water, please keep a copy for your own records.

Section 7: SW System - General Information

Is your system currently under a drinking water advisory?	🗌 Yes 🔲 No	□ N/A
If yes, what type of advisory? (i.e. Boil Water, Water Quality - Arsenic). Type:		
If yes, when was it issued? Date:		
If the system is under an advisory, are water users notified and public areas posted with the advisory notice?	Yes No	N/A
Are all water system components (supply, water treatment plant, storage tanks, pumps, etc) adequately protected from vandalism?	Yes No	□ N/A
Is the water treatment plant locked?	🗌 Yes 🔲 No	🗌 N/A
Has the wet wells, storage ponds, or water treatment plant ever been flooded?	🗌 Yes 🗌 No	□ N/A
Can water supply be maintained during power outages?	🗌 Yes 🗌 No	□ N/A
☐ Yes, standby generator (genset) ☐ Yes, fuel-driven pump		
How many electrical power outages per year or per season?		
Standby generator (genset) or fuel-driven pump located above the reservoir?	Yes No	□ N/A
If yes, is it in a metal or epoxy coated box to protect the reservoir from spills?	🗌 Yes 🗌 No	🗌 N/A
Does the system experience frequent <u>water</u> outages due to equipment failures or water supply capacity issues?	🗌 Yes 🗌 No	🗌 N/A
System experienced failures in the past of treatment/ disinfection equipment?	🗌 Yes 🔲 No	∏ N/A
Is the water system equipped with flow meters to monitor water use?	Yes No	 N/A
🗌 Raw water 🔄 Treated water 📄 Blended water 📄 Backwash water		
Rural distribution water Town distribution water Bulk/ truck/ pail fill w	ater	
Are water service connections metered?	🗌 Yes 🔲 No	🗌 N/A
System able to meet peak water demands with adequate at-tap pressures?	Yes No	□ N/A
What is the rated treatment or design capacity of the water treatment system? Units.		
What is the peak or maximum day demand on the water system? Units.		
Is the water treatment plant or pumphouse equipped with an alarm system?	<u> </u>	
☐ Yes, local alarm/ exterior light only ☐ Yes, sent to operator ☐ No ☐ N/	/A	
What alarm conditions are monitored?		
Distribution pump failure Low reservoir level Power failure	UV failure	
Chlorination pump failure High reservoir level Building flood		
Low chlorine residual Low incoming pressure Intrusion		
☐ High turbidity ☐ Low distribution pressure ☐ Other:		

Page 4 of 48

Section 7: SW System - General Information

Is the water system equipped with a suitable <u>raw</u> water sampling tap?	🗌 Yes	🗌 No	□ N/A
Is the water system equipped with a suitable <u>treated</u> water sampling tap?	🗌 Yes	🗌 No	🗌 N/A
Is the water system equipped with other sampling taps between treatment units?	🗌 Yes	🗌 No	🗌 N/A
Are there any obvious cross-connections within the piping between raw, partially treated, treated, or distributed water?	🗌 Yes	🗌 No	□ N/A
Are there any by-passes around critical treatment equipment or treatment processes such as a cartridge filter, or a UV unit?	🗌 Yes	🗌 No	□ N/A
Are these by-passes tagged or labelled?	🗌 Yes	🗌 No	N/A
Are there procedures for activating by-passes including DWO notification?	🗌 Yes	🗌 No	🗌 N/A
Does the system provide appropriate water treatment given the type of raw water source and the raw water quality?	🗌 Yes	🗌 No	□ N/A
Does the system receive frequent or repeated complaints from water users about water quality?	🗌 Yes	🗌 No	□ N/A

Describe redundancy level in the water supply, treatment, storage and pumping systems. (i.e. 2 filters)

Was the system designed by a Professional Engineer?	🗌 Yes	🗌 No	🗌 N/A
Was the system approved by the Office of Drinking Water?	🗌 Yes	🗌 No	🗌 N/A
Owner/ operator aware of the need to obtain approval (i.e. permit) before starting treatment upgrades or significant alterations to the system? This includes watermain extensions.	🗌 Yes	🗌 No	□ N/A
Is the installation of treatment equipment or disinfection equipment required by the Office of Drinking Water as noted in an advisory letter or inspection letter?	🗌 Yes	🗌 No	□ N/A
Adequate space in the building to install additional treatment equipment?	🗌 Yes	🗌 No	🗌 N/A
Are key water pipes, valves, taps, and components labelled to assist with O&M?	🗌 Yes	🗌 No	□ N/A
Is the equipment accessible for O&M and inspection?	🗌 Yes	🗌 No	🗌 N/A
Is there adequate space around equipment to perform O&M?	🗌 Yes	🗌 No	🗌 N/A

Section 7: SW System - General Information

Any changes, upg	rades,	, or expansions to the syster	m since the last assessment	? 🗌 Yes 🔲 No	🗌 N/A
If yes, explain:					
What is the average	ge age	e (years) of the following con	nponents of the system?		
Intake Structure					
Treatment					
Storage					
Distribution					
At inspection time	, were	all water system componen	ts in good working order?	🗌 Yes 🔲 No	□ N/A
If no, explain:					
What is the gener	al con	dition of the buildings?	Good		
			🗌 Fair - nearing e	end of useful life	
			Poor - replacer	nent required	
Additional comme	ents:				

Section 8: SW System - Water Supply Intake

Name of Surface Water (SW) source:		
Is there only one raw water intake?		🗌 Yes 🗌 No 📄 N/A
If more than one intake, how are the inta	kes used?	nating 🔲 Back-up/ emergency
Is the intake equipped with a fish screen	?	Yes No N/A
Does the fish screen meet the Departme Fish Screen Guideline?	ent of Fisheries and Oceans (DF	EO) □ Yes □ No □ N/A
Has the intake been inspected?		🗌 Yes 🗌 No 📄 N/A
Year of last inspection:		
Does the intake remain submerged at al	times?	🗌 Yes 🗌 No 📄 N/A
Is the intake located to avoid water quali at the surface (i.e. algae) and at the bott	-	bed?
Length of intake from shore? Units.		
Height of intake from bottom? Units.		
Depth of intake below surface? Units.		
Is the intake located to avoid physical da	mage from boats etc.?	Yes No N/A
Are there significant seasonal changes in	n water quality?	Yes No N/A
Describe water quality changes:		
Have algae blooms occurred near the in	take?	🗌 Yes 🗌 No 📄 N/A
Have zebra mussels been found near th	e intake?	🗌 Yes 🗌 No 📄 N/A
Is there zebra mussel prevention or mitig	ation? i.e. chlorine at intake	🗌 Yes 🗌 No 📄 N/A
What is the nature of surrounding land u	se within approximately 100 m	(300 feet) of the intake?
Urban/ Residential Cottages/ Re	ecreational 🔲 Agricultural/ Cr	op Production
Commercial Natural/ Unc	leveloped 🛛 Agricultural/ Liv	vestock
Any potential sources of contamination v	vithin 100 m (300 feet) of the in	take? 🗌 Yes 🗌 No 🗌 N/A
□ Recreational boating	Livestock area	Landfill site
☐ Major bank erosion □	Manure storage area	Petroleum storage area
☐ Municipal wastewater discharge ☐	Manure application area	Chemical storage area
□ Industrial wastewater discharge □	Composting site	Feed/ grain storage area
Major highway	Other:	Herbicide/ fertilizer apply area
Major rail line		

Section 8: SW System - Water Supply Intake		
Is the water supply diverted to a raw water impoundment or storage pond?	🗌 Yes 🔲 No	N/A
Is the water diverted all the time or only when water quality issues occur?		
Year-round diversion Seasonal diversion		
Is the raw water pond equipped with an aeration system?	🗌 Yes 🔲 No	N/A
Has the raw water pond experienced algae issues?	🗌 Yes 🗌 No	🗌 N/A
Is there a screen on the intake from the raw water pond?	🗌 Yes 🔲 No	□ N/A
Are there chemical feeds to the raw water pond?	🗌 Yes 🗌 No	🗌 N/A
Is there a raw water wet well?	🗌 Yes 🔲 No	N/A
Is the raw water wet well equipped with at least two cells with pumping capacity in each cell to allow cell isolation and O&M?	🗌 Yes 🗌 No	🗌 N/A
Where is the raw water pump located? i.e. intake, wet well, water treatment plant		
Does the raw water source have adequate capacity to meet demands?	🗌 Yes 🔲 No	□ N/A
What is the capacity of the raw water pumping system? Units.		
What is the peak or maximum day demand on the water system? Units.		
How is the raw water pump controlled?		
How is the raw water pump controlled? Distribution pressure switch Storage level Other:		
	Yes No	N/A
☐ Distribution pressure switch ☐ Storage level ☐ Other:	 ☐ Yes ☐ No ☐ Yes ☐ No 	□ N/A □ N/A
□ Distribution pressure switch □ Storage level □ Other: □ Is the pump equipped with isolation and discharge check valves?		
 Distribution pressure switch Storage level Other: Is the pump equipped with isolation and discharge check valves? Is there a pressure gauge on the raw water supply line to the treatment system? Is the raw water supply line to the water treatment plant adequately sized 	☐ Yes ☐ No	N/A
 Distribution pressure switch Storage level Other: Is the pump equipped with isolation and discharge check valves? Is there a pressure gauge on the raw water supply line to the treatment system? Is the raw water supply line to the water treatment plant adequately sized and the appropriate pressure rated pipe? Is the raw water supply line securely anchored to the bottom of the 		□ N/A □ N/A
 Distribution pressure switch Storage level Other: Is the pump equipped with isolation and discharge check valves? Is there a pressure gauge on the raw water supply line to the treatment system? Is the raw water supply line to the water treatment plant adequately sized and the appropriate pressure rated pipe? Is the raw water supply line securely anchored to the bottom of the surface water source or raw water storage pond? Once the raw water supply line reaches the shore, is the line protected from damage by being buried with at least 	Yes No Yes No Yes No	□ N/A □ N/A □ N/A

Section 8: SW System - Water Supply Intake

What is the average age (years) of the raw water supply?						
Supply						
What is the genera	al con	dition of the raw water supply?				
			Fair - nearing end of useful life			
Poor - replacement required						
Additional comme	ents:					
Attachment/s:		tch or map showing intake and app	roximate distances to any			
		contamination, and to the water tre				

Section 9: SW System - Pressure Filters (complete one for each type)

 \Box Section is Not Applicable to this System.

What is the type of pressure filter? i.e. sand, multi-media	
How many units?	
How are the pressure filters being used?	
□ turbidity control barrier □ pre-treatment □ post-treatment polisi	-
Is the rated capacity of the filters able to meet peak or maximum day den	nands? 🗌 Yes 🗌 No 🗌 N/A
What is the capacity of the filters? Units.	
What is the peak or maximum day demand on the water system? Units.	
What type(s) of media are in the filters? (layers)	Other:
Anthracite Carbon Sand Greensand Gravel	
Can the filters be visually inspected for maintenance and repair?	🗌 Yes 🗌 No 📄 N/A
Are the filters regularly inspected?	Yes No N/A
Inspection frequency for the filters?	
Has the filter media ever been replaced or topped up?	Yes No N/A
Year media last replaced or topped up:	
Does the system use pre-coagulation?	Yes No N/A
If yes, which chemical?	
If yes, what is the target dosage? (mg/L)	
Can head loss be determined for the filters?	🗌 Yes 🗌 No 📄 N/A
Are the filters regularly backwashed?	🗌 Yes 🗌 No 🔲 N/A
Backwash frequency for the filters?	
What is the trigger and trigger value to initiate a backwash? (time, pressure loss, turbidity)	
Is the backwash flow rate adequate?	Yes No N/A
What is the source of backwash water? Filtered and chlorinated water	er
Filtered and unchlorinated w	ater 🔲 Raw water

Section 9: SW System - Pressure Filters (complete one for each type)

Section is Not Applicable to this System.

How is the backw	ash disposed of?	Holding tank o	r septic system	🗌 Oth	er:		
🗌 Mur	nicipal sewer syste	em 🗌 Discharged to	environment				
	lisposal is to sewe irect connection to	r or drain, is there an avoid backflow)	air gap?		Yes [] No	🗌 N/A
Is an effective air		🗌 Yes 🗌] No	□ N/A			
Is there an effluer	nt reverse pipe tra	p to help prevent drai	ning of filters?		🗌 Yes 🗌] No	🗌 N/A
Does the filter sys	stem have an air re	elease valve, pressur	e relief valve, or	both?	🗌 Yes 🗌] No	🗌 N/A
Is there a suitable	sample tap for wa	ater leaving the filters	?		🗌 Yes 🗌] No	N/A
What were the tur	rbidity levels (NTU) in the raw and filter	ed water at time	of the ir	spection?		
Turbidity - raw		Turbidity - filtered					
Is a carbon filter u	used for colour/ or	ganics removal or pol	ishing?		Yes] No	□ N/A
Change out frequ	lency for the GAC	? i.e. every 6 months,	never				
What is the trigge i.e. annually, UVT		the carbon (GAC) ca	rbon media?				
Is the Empty Bed	Contact Time (EB	SCT) known?			🗌 Yes 🗌] No	🗌 N/A
If yes, how much	time is the water i	n contact with the GA	C? i.e. minutes				
What is the avera	ige age (years) of	the filtration equipme	nt?				
Filtration							
What is the gener	ral condition of the	filtration equipment?	Good]
			🗌 Fair - ne	earing er	nd of usefu	l life	
			Poor - re	eplacem	ent require	d	
Additional comme	ents:						

Section 10: SW System - Cartridge Filters (single or bank of micron filters)

Section is I	Not Applicabl	e to this Syste	em.							
How is the filtration equipment being used?										
UV Pr							Pre-tre	eatment	t filter	
Are the filter hou	usings and car	tridge filters NS	SF cert	tified?] Yes	🗌 No	N/A
If yes, to which	NSF standards	s? (i.e. 53, 60, 6	61)				Г			
Is the rated capa	s the rated capacity of the filters able to meet peak or maximum day demands?									
What is the capa	•		•		,					
What is the pea	k or maximum	day demand or	n the \	water syster	m? Uni	its.				
Can pressure lo	ss across indiv	vidual filters be	monit	ored?] Yes	🗌 No	N/A
Are spare cartrie	dges kept on-h	and?] Yes	🗌 No	🗌 N/A
Are cartridges c	hanged as per	manufacturer's	s requ	irements? (i.e. pre	essure lo	oss) [] Yes	🗌 No	🗌 N/A
LIST ALL CART	RIDGE FILTE	RS IN THEIR C	ORDE	R IN THE T	REAT	MENT P	ROCE	ESS.		
S	ize (microns)	Manufacturer's listed max. pressure loss (Trigger and to change fi (pressure lo	ilter		dity)		nge out uency s)	
Cartridge #1									-	
Cartridge #2										
Cartridge #3										
Cartridge #4										
Is there a suitab	le sampling ta	p for water leav	ving ea	ach filter?] Yes	🗌 No	N/A
Is there a suitab	le sampling ta	p for the final fil	lter eff	fluent?] Yes	🗌 No	N/A
Are the filters ed	quipped with a	n air release va	lve, pi	ressure relie	ef valve	e, or ven	nt?] Yes	🗌 No	N/A
What were the t	urbidity levels	(NTU) in the ra	w and	l filtered wat	ter at ti	me of th	ne insp	pection?	?	
Turbidity - raw		Turbidity	/ - filte	ered						
Does the system	n use pre-coag	julation?] Yes	🗌 No	□ N/A
If yes, which ch	emical?									
If yes, what is th	ne target dosa	ge? (mg/L)								

Section 10: SW System - Cartridge Filters (single or bank of micron filters)

	Section i	is Not	Applicable	to	this	System.
--	-----------	--------	------------	----	------	---------

Are cartridge filters i.e. turbidity standa		as a primary barrier?		🗌 Yes 🗌 No	🗌 N/A
		, ge filter rated at 1 micron absolute?		🗌 Yes 🔲 No	□ N/A
Does the 1 micron removal of Cryptos		lute filter carry certification to NSF <i>lium</i> and <i>Giardia</i> ?	Standard 53 for	Yes No	N/A
Is the final stage c before returning th		ge filter flushed after changing out t r to service?	he filter and	🗌 Yes 🗌 No	🗌 N/A
What is the average	ge age	e (years) of the filtration equipment	?		
Filtration					
What is the genera	al con	dition of the filtration equipment?	🗌 Good		
			🗌 Fair - nearing	end of useful life	
			Poor - replace	ment required	
Additional comme	nts:				

Section 11: SW System - Anion Exchange for Organics/ THM Control

1	Section	is	Not	Ap	olicable	to	this	System.	
	000000			· • P	phoable			0,000,000	

What type of resin is used inside the unit? i.e. product name or Type II macroporous strong base polyacrylic resin

Туре:		
Is there a suitable sample tap for water entering the units?	🗌 Yes 🔲 No	□ N/A
Is there a suitable sample tap for water <u>leaving</u> the units?	🗌 Yes 🔲 No	🗌 N/A
Is UVT (UV Transmittance) measured with a hand-held or online unit?	🗌 Yes 🔲 No	🗌 N/A
What is the manufacturer or supplier's published or quoted TOC (Total Organic Carbon) removal rate? i.e. 60-80%		
How often (frequency) is the resin regenerated? Units.		
How is the regeneration frequency set? Based on volume of water treated	d 🔲 Timed	
Based on removal of organics	Other	
What is used to regenerate the resin?		
Is the salt used for regeneration food grade and NSF 60 certified?	🗌 Yes 🔲 No	🗌 N/A
Has the resin ever undergone a chemical clean with an acid solution?	🗌 Yes 🔲 No	🗌 N/A
Where is the waste brine discharged after regeneration?		
Municipal sewer Holding tank or septic system Discharged to envi	ronment	
If the brine disposal is to sewer or drain, is there an air gap? (i.e. there is no direct connection to avoid backflow)	🗌 Yes 🔲 No	🗌 N/A
What are the alkalinity levels (mg/L) after anion exchange?		
Alkalinity - raw Alkalinity - filtered		
What are the pH levels after anion exchange?		
pH - raw pH - filtered		
Is the water showing signs of being corrosive?	🗌 Yes 🔲 No	🗌 N/A
Is there a valved bypass to allow blending to control water corrosivity?	🗌 Yes 🔲 No	🗌 N/A

Section 11: SW System - Anion Exchange for Organics/ THM Control

a ia Nat Appliachla ta thia Cu ... ~ .

Section is Not Applicable to this Syst	
What is the average age (years) of the equip	oment?
Anion Exchange	
What is the general condition of the equipme	ent? 🗌 Good
	Fair - nearing end of useful life
	Poor - replacement required
Additional comments:	

Section 12: SW System - Conventional Treatment (coagulation-flocculation-clarification-filtration)

 $\hfill\square$ Section is Not Applicable to this System.

Type of conventional treatment system. i.e. steps/ components						
Is the conventional treatment system a packaged unit system?	🗌 Yes	🗌 No	🗌 N/A			
Manufacturer/ model #						
Is the rated capacity of the system able to meet peak or maximum day	demands? Yes	🗌 No	□ N/A			
What is the capacity of the system? Units.						
What is the peak or maximum day demand on the water system? Units.						
Dece the overtem use accordition?						
Does the system use coagulation?	Yes	No	□ N/A			
Does the system use polymerization?	🗌 Yes	🗌 No	□ N/A			
If yes, which chemicals?						
If yes, what is the target dosage or dosage range? (mg/L)						
Is the chemical feed rate or dosage adjusted seasonally?	🗌 Yes	🗌 No	🗌 N/A			
If yes, what are the adjustments based on?	UVT changes	Oth	er			
Is the pH of the water within the optimal range for the chemicals?	🗌 Yes	🗌 No	🗌 N/A			
For solids contact units, does the system use pH adjustment chemical?	Yes	🗌 No	🗌 N/A			
If yes, which chemical? i.e. hydrated lime, quick lime, etc						
If yes, what is the target dosage or dosage range? (mg/L)						
Is non-carbonate hardness an issue?	Yes	🗌 No	□ N/A			
If yes, is soda ash used to meet hardness targets?	Yes	No	N/A			

Section 12: SW System - Conventional Treatment (coagulation-flocculation-clarification-filtration)

Section is Not Applicable to this System.		
Is a rapid mix stage or in-line mixer provided after chemical addition?	🗌 Yes 🔲 No	N/A
Is a separate flocculation stage provided with slower mixing?	🗌 Yes 🔲 No	🗌 N/A
Are several mixers provided with decreasing mix rates to promote floc for	ormation? 🗌 Yes 🔲 No	□ N/A
Is a detention time of at least 30 minutes provided for flocculation?	🗌 Yes 🔲 No	□ N/A
Is the clarifier at least 3 m (10 feet) in depth to allow settling and sludge deposition?	🗌 Yes 🔲 No	□ N/A
Is a retention time at least 4 hours provided by the clarifier?	🗌 Yes 🔲 No	🗌 N/A
Is the clarifier designed to enhance floc settling rates?	🗌 Yes 🔲 No	□ N/A
What type of settling units in the clarifer?	Other:	
☐ Tube settlers ☐ Plate settlers ☐ Sludge blanket		
Is there an adequate sludge removal system?	🗌 Yes 🔲 No	□ N/A
Is the clarifier equipped with a sloped base to a valved drain?	🗌 Yes 🔲 No	🗌 N/A
Is there an air gap at the drain for backflow prevention?	🗌 Yes 🔲 No	🗌 N/A
Is a recarbonation basin used to decrease pH after <u>clarifier</u> ?	🗌 Yes 🔲 No	N/A
Recarbonation details:		
What type(s) of media are in the filters? (layers)	Other:	
Anthracite Carbon Sand Greensand Gravel		
Can the filters be visually inspected for maintenance and repair?	🗌 Yes 🔲 No	🗌 N/A
Are the filters regularly inspected?	🗌 Yes 🔲 No	🗌 N/A
Inspection frequency for the filters?		
Has the filter media ever been replaced or topped up?	🗌 Yes 🗌 No	□ N/A
Year media last replaced or topped up:		

Section 12: SW System - Conventional Treatment (coagulation-flocculation-clarification-filtration)

Section is Not Applicable to this System.	
Can head loss be determined for the filters?	🗌 Yes 🗌 No 📄 N/A
Are the filters regularly backwashed?	Yes No N/A
Backwash frequency for the filters?	
What is the trigger and trigger value to initiate a backwash? (time, pressure loss, turbidity)	
Is the backwash flow rate adequate?	🗌 Yes 📃 No 🔛 N/A
What is the source of backwash water? Filtered and chlorinated values of the source of backwash water?	water
Filtered and unchlorinate	ed water 🛛 Raw water
How is the backwash disposed of? Holding tank or septic systemetry	em 🔲 Other:
Municipal sewer system Discharged to environment	t
If the backwash disposal is to sewer or drain, is there an air gap? (i.e. there is no direct connection to avoid backflow)	☐ Yes ☐ No ☐ N/A
Is an effective air scour part of the backwash procedures?	Yes No N/A
Is the filter equipped with filter-to-waste following backwash?	🗌 Yes 📃 No 📃 N/A
Is the filter-to-waste period automatically controlled based on turbidity	y levels? Yes No N/A
If manually controlled, explain the trigger and trigger value for stoppir i.e. turbidity levels, timed, etc	ng the filter-to-waste?
Trigger to stop filter-to-waste:	
Is there a suitable sample tap for water leaving each of the filters?	Yes No N/A
What were the turbidity levels (NTU) in the raw and filtered water at ti	ime of the inspection?

Section 12: SW System - Conventional Treatment (coagulation-flocculation-clarification-filtration)

□ Section is Not Ap	oplicable to this System.	
What is the average ag	ge (years) of the treatment equipmen	t?
Treatment		
What is the general co	ndition of the treatment equipment?	Good
		Fair - nearing end of useful life
		Poor - replacement required
Additional comments:		
L		

Section 13: SW System - Slow Sand/ Biological Filtration

 \Box Section is Not Applicable to this System.

Is the rated capacity of the filters able to meet pea	ak or maximum day dem	ands?	🗌 Yes	🗌 No	N/A
What is the capacity of the filters? Units.					
What is the peak or maximum day demand on the	e water system? Units.				
Are there two filter beds each with independent bid to allow for cleaning and repairing?	ological layers		🗌 Yes	🗌 No	□ N/A
Is the biological layer scraped?			🗌 Yes	🗌 No	N/A
If yes, what is the frequency?					
Can the filters be visually inspected for maintenan	nce and repair?		Yes	🗌 No	 N/A
Are the filters regularly inspected?			🗌 Yes	🗌 No	🗌 N/A
Inspection frequency for the filters?					
Is there an ozone generator?			Yes	🗌 No	N/A
If yes, what is the source gas for the ozone genera	ator?				
Compressed air Concentrated oxygen	Liquid oxygen (LOX)				
What is the applied dosage range for the ozone (n	mg/L)?				
Is the ozone feed rate or dosage adjusted season	ally?		Yes	🗌 No	N/A
If yes, what are the adjustments based on?	urbidity changes 🔲 U\	/T chan	 ges □ (Other	
Is the ozone injected in a sidestream using a vent			☐ Yes	🗌 No	□ N/A
Is an ozone contactor tank provided immediately a	after ozone injection?		 □ Yes	 ∏ No	 N/A
Is the ozone contactor equipped with an ozone de the atmosphere?	estruction unit vented to		Yes	□ No	N/A
Is an ambient ozone monitor/ sensor located near	the ozone equipment?		🗌 Yes	🗌 No	□ N/A
Were all ozone systems functional at the time of the	he inspection?		Yes	 No	 N/A
Is there a gravel roughing filter provided ahead of	the slow sand filter?		Yes	🗌 No	□ N/A
How often (frequency) is the roughing filter backw	vashed?				
What is the trigger and trigger value to initiate a ba (time, head loss, turbidity)	ackwash?				
Do the slow sand filters have at least 750 mm (30	inches) of sand?		🗌 Yes	🗌 No	N/A
Has the slow sand filter media ever been replaced	d or topped up?		🗌 Yes	🗌 No	N/A
Can head loss be determined for each slow sand	filter?		🗌 Yes	🗌 No	□ N/A

Section 13: SW System - Slow Sand/ Biological Filtration

Section is Not Applicable to this System.		
Are the slow sand filters backwashed?	🗌 Yes 🔲 No	N/A
If yes, what is the frequency?		
What is the trigger and trigger value to initiate a backwash? (time, head loss, turbidity)		
Is the backwash source treated & unchlorinated water?	🗌 Yes 🔲 No	🗌 N/A
Is the filter equipped with filter-to-waste following backwash?	🗌 Yes 🔲 No	□ N/A
Is the filter-to-waste period automatically controlled based on turbidity levels?	🗌 Yes 🔲 No	🗌 N/A
If manually controlled, explain the trigger and trigger value for stopping the filte i.e. turbidity levels, timed, etc	r-to-waste?	
Trigger to stop filter-to-waste:		
Are there Biological Activated Carbon (BAC) filters after the slow sand filters?	🗌 Yes 🔲 No	N/A
Are the BAC filters backwashed?	🗌 Yes 🔲 No	🗌 N/A
If yes, what is the frequency?		
Is the backwash source treated & unchlorinated water?	🗌 Yes 🔲 No	□ N/A
How is the backwash water from the biological filters disposed?		
☐ Municipal sewer system ☐ Holding tank or septic system ☐ Oth	er:	
Discharged to environment		
If the backwash disposal is to sewer or drain, is there an air gap? (i.e. there is no direct connection to avoid backflow)	🗌 Yes 🔲 No	□ N/A
Is there a suitable sample tap for water leaving each of the filters?	🗌 Yes 🔲 No	N/A
What is the average age (years) of the filtration equipment?		
Filtration		
What is the general condition of the filtration equipment?

Section 16: SW System - Chlorination

 \Box Section is Not Applicable to this System.

What type of chlorine solution is used? Sodium hypochlorite fed directly from	n contain	er	
Diluted sodium hypochlorite			
Solution from calcium hypochlorite p	owders o	or tablets	S
Unscented household bleach			
On-site sodium hypochlorite generat	ion ("ana	lyte")	
What is the make-model-brand name of the chlorine or generator used? (i.e. supplier label)			
Does the chlorine solution, or powder/ tablets, or salt carry NSF 60 certification?	🗌 Yes	🗌 No	N/A
Does the on-site sodium hypochlorite generator carry NSF 60 certification?	🗌 Yes	🗌 No	🗌 N/A
Does the on-site sodium hypochlorite generator carry NSF 61 certification?	🗌 Yes	🗌 No	🗌 N/A
Is an adequate amount of chlorine chemical kept on-hand at all times? (i.e. 30 days minimum)	🗌 Yes	🗌 No	□ N/A
Is the chlorine solution stored away from sunlight?	🗌 Yes	🗌 No	N/A
Is the sodium hypochlorite solution used within 3 months of purchase?	🗌 Yes	🗌 No	🗌 N/A
Are chlorine tanks stored over a spill tray?	🗌 Yes	🗌 No	N/A
Is the chlorine stored in a separate chemical storage room?	🗌 Yes	🗌 No	🗌 N/A
Is the system equipped with duty-standby chlorine pumps with automatic switchover in the case of pump failure?	🗌 Yes	🗌 No	□ N/A
Is there only a single feed chlorine pump?	🗌 Yes	🗌 No	🗌 N/A
Is there a spare feed chlorine pump? (i.e. "shelf spare")	🗌 Yes	🗌 No	N/A
Are critical spare parts kept on-hand to maintain the feed pump?	🗌 Yes	🗌 No	🗌 N/A
What triggers operation of the chlorine feed? (i.e. raw water pump, reservoir level, etc)			
Is operation of the feed pump controlled by the raw water pump (fixed injection rate)?	ite) or		
□ N/A □ Raw water pump □ Flow meter □ Other:			
Do feed pump settings suggest a properly sized feed pump?	🗌 Yes	🗌 No	🗌 N/A

Section 16: SW System - Chlorination	
Section is Not Applicable to this System.	
What type of chlorine residual test kit is used?	
□ N/A □ Digital DPD colorimeter □ Colour wheel □ Unapproved	unit (i.e. pool kit)
When was the equipment last calibrated?	
Is the system equipped with an online chlorine residual analyzer?	Yes No N/A
Explain where the analyzer sample draw water goes:	
Normally, what is the free chlorine residual (mg/L) of the outgoing water?	
Is chlorine gas (Cl2) used for chlorination?	Yes No N/A
If yes, what type of chlorine gas addition is used? 100# 150# cylind	lers 🗌 ton cylinders 🗌 N/A
Is there automatic changeover equipment to switch from one cylinder or bank of cylinders to another cylinder or bank of cylinders, to ensure that unchlorinated water is not allowed into the distribution system?	Yes No N/A
Does gas chlorinator provide discharge at a point of positive pressure?	🗌 Yes 🗌 No 📄 N/A
Is the chemical feed equipment located in a separate room to reduce hazards and vapors?	Yes No N/A
What is the average age (years) of the chlorination equipment?	
Chlorination	
What is the general condition of the chlorination equipment?	
🗌 Fair - nea	aring end of useful life
Devision Poor - re	placement required

Section 18: SW System - UV Disinfection

 $\hfill\square$ Section is Not Applicable to this System.

Are the UV units certified to NSF Standard 55 Class A?	🗌 Yes	🗌 No	□ N/A		
Does the unit provide a minimum dosage of 40 mJ/cm ² ?	🗌 Yes	🗌 No	🗌 N/A		
What is the make-model-brand name of the UV units?					
How many UV units are used?					
Is the UV disinfection system equipped with Uninterruptible Power Supply (UPS) for low power events like brown-outs?	🗌 Yes	🗌 No	□ N/A		
Is the system equipped with a minimum 5 micron cartridge pre-filter or another type of pre-filter, such as iron filter?	🗌 Yes	🗌 No	□ N/A		
Have the units been installed in the right orientation (horizontal or vertical) based on the manufacturer's specifications?	🗌 Yes	🗌 No	□ N/A		
Is there a by-pass around the UV disinfection system that could allow un-disinfected water to be sent to distribution or taps?	🗌 Yes	🗌 No	□ N/A		
Are these by-passes tagged or labelled?	🗌 Yes	🗌 No	🗌 N/A		
Are there procedures for activating by-passes including DWO notification?	🗌 Yes	🗌 No	🗌 N/A		
Are there isolation valves before and after the UV units?	🗌 Yes	🗌 No	🗌 N/A		
Are proper procedures being followed to clean the sleeve and sensor?	🗌 Yes	🗌 No	□ N/A		
How often are the sleeves cleaned?					
Are UV bulbs being changed at least annually?	🗌 Yes	🗌 No	🗌 N/A		
Is there a spare UV bulb available? (i.e. "shelf spare")	🗌 Yes	🗌 No	🗌 N/A		
Are the UV sensors being calibrated once per year, or as per manufacturer's requirements, or when an unresolved alarm occurs?	Yes	🗌 No	□ N/A		
UV system or sensor checked by the equipment supplier in the last year?	🗌 Yes	🗌 No	N/A		
Has Operator or supplier had to replace sensors?	🗌 Yes	🗌 No	□ N/A		
What is the usual UVT level (%), or at the time of the inspection?					
Have the UV units experienced ongoing or frequent alarms suggesting an issue with the water quality (UVT level) or the sensor?	Yes	🗌 No	□ N/A		
Does the UV unit have an automatic shut-off (i.e. solenoid valve) that shuts off the water supply if there is a UV alarm?	Yes	🗌 No	□ N/A		
How frequent are UV alarms? Ino alarms (haven't had any) Infrequent (i	.e. bulb (change	only)		
frequently (i.e. weekly) - need to clean sleeve or sensor issues					
Constantly (i.e. daily or anytime UV runs) - cleaning only resolves issues for a	short pe	eriod of t	ime		
What kind of alarms? N/A visual audible sent to computer Check all that apply. other other Image: Sent to computer	sent	to cellp	hone

Storage System Configuration:	Baffling Fac	ctor: (This System)						
Hydropneumatic tank with single inlet and outlet		time 🗌 Yes 🗌 No						
Single unbaffled retention tank; or multiple tanks in parallel	0.1	🗌 Yes 🔲 No						
Two storage tanks in series	0.2	🗌 Yes 🔲 No						
Three or more storage tanks in series	0.3 - 0.4	🗌 Yes 🔲 No						
Baffled tank or baffled reservoir cell	0.3 - 0.6	🗌 Yes 🔲 No						
Based on the above table, what is the baffle factor for this sy	/stem:							
What is the effective chlorine contact time? (Multiply the retention time from previous page by the baffle factor from above.)								
Effective chlorine contact time: (i.e. 25 minutes)								
Storage tanks sized for at least 20 minutes effective chlorine contact		🗌 Yes 🗌 No 📄 N/A						
	🗌 don't know							
For atmospheric tanks, are the tanks equipped with level ser pump operation?	Yes No N/A							
☐ floats ☐ pressure sensors ☐ ultrasonic sensing system ☐ other (contact probes)								
Are the tanks accessible for visual inspection?	Yes No N/A							
Are the tanks equipped with access or inspection hatches?	🗌 Yes 🗌 No 🗌 N/A							
Are the tanks regularly inspected?		☐ Yes ☐ No ☐ N/A						
Last inspected or inspection frequency:								
Are the tanks regularly cleaned and disinfected?		☐ Yes ☐ No ☐ N/A						
Last cleaned or cleaning frequency:								

Section 19: SW System - Treated Water Storage in Aboveground Tank(s)

 \Box Section is Not Applicable to this System.

Are the inlet and outlet pipes located to minimize the chance of water short-circuiting through the tanks and leading to water stagnation?			Yes [] No	□ N/A	
Is the pump intake line properly sealed and located at least 150 mm (6 inches) above the bottom of the tank?			Yes [] No	🗌 N/A	
Can individual tanks be isolated for inspection or maintenance?; without interrupting water service or interrupting chlorine contact time.			Yes [] No	🗌 N/A	
Are pumps connect	cted to	o multiple tanks to allow for isolation?		🗌 Yes [] No	🗌 N/A
Are all openings se	ealed	watertight?		🗌 Yes [] No	🗌 N/A
Are all vents, over	flows,	and drain lines equipped with screens?	?	🗌 Yes [] No	🗌 N/A
Are all vents, over	flows,	and drain lines located to avoid backflo	ow or run-off?	Yes] No	🗌 N/A
If the tanks are loc	ated	outside the building:				
Are the tanks prote	ected	from vandalism (fenced area or locked	hatches)?	🗌 Yes [] No	🗌 N/A
Are the tanks prote	ected	from direct sunlight (opaque or covered	1?)	Yes] No	🗌 N/A
What is the average	ge age	e (years) of the storage equipment?				
Storage						
What is the genera	al con	dition of the storage equipment?	Good			
		Γ	_] Fair - nearing e	end of usefu	I life	
		Ē] Poor - replacer	nent require	ed	
Additional comme	nts:					

Section 20: SW System - Treated Water Storage Inground Reservoir or Buried Tank(s)

 \Box Section is Not Applicable to this System.

What type of storage system is used to store treated water before it is distributed?

inground concrete reservoir Duried tank/s Other:	
What is the total volume of the reservoir/s or tank/s? Units.	
How many reservoir cells or tanks? List # and each volume.	
What is the total storage volume based on the lowest operating level? Units.	
Are the cells or tanks in series (flow through one to another) or parallel (separate flows)?	
□ single (1) cell □ multiple cells □ cells in series □ cells in parallel □ N/A	
What is the reservoir or tank material?	
polyethylene (PE) other:	
Is the reservoir or interior tank coating certified or approved for use in a potable water system? (i.e. NSF 61 or FDA approved)	J/A
What is the purpose of the water storage? I to meet peak demands I chlorine contact time Check all that apply.	
fire protection other	
	I/A
Reservoir or tanks sized for at least 20 minutes chlorine contact time?	I/A
🗌 don't know	
Reservoir or tanks sized for fire protection?	I/A
If no for fire protection, does it provide at least 1 Average Day Demand (ADD) and less than 3 ADD of storage?	I/A
What is the peak hourly flow rate? Units.	
What is the <u>hydraulic retention time</u> at the estimated <u>peak hourly flow rate</u> when the cells/ tanks are at their <u>lowest operating level</u> ? (Divide the volume from above by the peak hourly flow rate from above. Convert to same units.)	
Retention time: (i.e. 2.50 hours or 150 minutes)	

Section 20: SW System - Treated Water Storage Inground Reservoir or Buried Tank(s)

The following table is taken from the "Filtration and Disinfection Log Reduction Credits" document from
the Office of Drinking Water. This document is available online.

Table 1: Baffling Factors for Water Storage Systems.

Storage System Configuration:	Baffling Factor:	(This System)
Hydropneumatic tank with single inlet and outlet	no contact time	🗌 Yes 🔲 No
Single unbaffled retention tank; or multiple tanks in parallel	0.1	🗌 Yes 🔲 No
Single unbaffled cell reservoir, inlet and outlet at opposite ends	0.2	🗌 Yes 🔲 No
Two storage tanks in series	0.2	🗌 Yes 🔲 No
Two cell reservoir, inlet and outlet in same cell	0.2	🗌 Yes 🔲 No
Two cell reservoir, inlet and outlet at opposite ends of separate cells	0.3	🗌 Yes 🔲 No
Three or more storage tanks in series	0.3 - 0.4	🗌 Yes 🔲 No
Baffled tank or baffled reservoir cell	0.3 - 0.6	🗌 Yes 🔲 No
Based on the above table, what is the baffle factor for this system:		
What is the effective chlorine contact time? (Multiply the retention time from previous page by the baffle factor from	om above.)	
Effective chlorine contact time: (i.e. 25 minutes)		
Reservoir or tanks sized for at least 20 minutes effective chlorine cor	ntact time?	Yes 🗌 No 🗌 N/A
		don't know
Is the reservoir or tanks equipped with level sensors for pump operation?		Yes 🗌 No 📄 N/A

☐ floats ☐ pressure sensors ☐ ul	trasonic sensing system	other (contact probes)	
Are the cells or tanks accessible for visual	inspection?	🗌 Yes 🔲 No	N/A
Are the cells or tanks equipped with acces	s or inspection hatches?	🗌 Yes 🔲 No	🗌 N/A
Are the cells or tanks regularly inspected?		🗌 Yes 🔲 No	🗌 N/A
Last inspected or inspection frequency:			
Are the cells or tanks regularly cleaned an	d disinfected?	🗌 Yes 🔲 No	🗌 N/A
Last cleaned or cleaning frequency:			

Section 20: SW System - Treated Water Storage Inground Reservoir or Buried Tank(s)

 \Box Section is Not Applicable to this System.

Are the inlet and outlet pipes located to minimize the chance of water short-circuiting through the cells or tanks and leading to water stagnation?	Yes	🗌 No	□ N/A
Are there at least two isolatable cells or tanks with a valved interconnection?	🗌 Yes	🗌 No	🗌 N/A
Can individual cells or tanks be isolated for inspection or maintenance?; without interrupting water service or interrupting chlorine contact time.	🗌 Yes	🗌 No	□ N/A
Is pumping capacity available in at least two cells or tanks to allow water supply to be maintained when cleaning the reservoir cells or tanks?	🗌 Yes	🗌 No	□ N/A
Are access hatches curbed and sealed watertight?	🗌 Yes	🗌 No	□ N/A
Are all openings sealed watertight?	🗌 Yes	🗌 No	□ N/A
Are pipe entries into the reservoir or tanks sealed watertight to prevent contamination? (i.e. LinkSeal or cast-in-place sleeve)	🗌 Yes	🗌 No	□ N/A
Do any floor drains or wastewater pipes pass over or through the reservoir?	🗌 Yes	🗌 No	🗌 N/A
🗌 Yes - floor drain 🛛 Yes - wastewater 🔄 Yes - other			
If yes, are these pipes encased in concrete?	🗌 Yes	🗌 No	🗌 N/A
Are pipes through walls protected from differential settling? (i.e. flexible joints/ ball-and-socket joints)	🗌 Yes	🗌 No	□ N/A
Are all vents, overflows, and drain lines equipped with screens?	🗌 Yes	🗌 No	N/A
Is the reservoir or tank equipped with a screened air vent? (i.e. gooseneck or inverted J-pipe)	🗌 Yes	🗌 No	□ N/A
Is the reservoir or tank equipped with an adequately sized screened overflow that discharges to the ground?	🗌 Yes	🗌 No	□ N/A
Are all vents, overflows, and drain lines located to avoid backflow or run-off?	🗌 Yes	🗌 No	□ N/A
Is the reservoir or tank protected from contamination from run-off or spills into the water treatment plant?	🗌 Yes	🗌 No	□ N/A
Is the reservoir or tank located at least 15 m away from sewer system components such as sewer lines or holding tanks?	🗌 Yes	🗌 No	□ N/A
If the reservoir extends beyond the footprint of the water treatment plant building, is the reservoir roof adequately sloped and drained?	🗌 Yes	🗌 No	□ N/A
Is the reservoir or tank site graded to drain away?	🗌 Yes	🗌 No	🗌 N/A
If the cells or tanks are located outside the building:			
Are the cells or tanks protected from vandalism (fenced area or locked hatches)?	🗌 Yes	🗌 No	🗌 N/A
Please attach a schematic of reservoir cells or tanks showing the inlet, outlet, pump locations, baffles.] Attach	nment/s

Section 22: SW System - Distribution System (not intended for a building plumbing system)

Section is Not Applicable to this System.		
Are there up-to-date maps of the distribution system indicating locations of: service connections, valves, flush-outs, hydrants, etc	🗌 Yes 🔲 No	□ N/A
What types of watermain materials exist in the distribution system? Check all that	t apply.	
PVC (polyvinyl chloride) AC (asbestos cement) iron - case	t	
HDPE (high-density polyethylene) other	tile	
Are watermains adequately sized? (i.e. 50 mm (2 inch) if no fire protection, 150 mm (6 inch) if fire protection)	🗌 Yes 🔲 No	□ N/A
Are watermains adequate pressure rating? (i.e. minimum 100 psi or 690 kPa)	🗌 Yes 🗌 No	□ N/A
Is adequate at-tap pressure of 30-to-60 psi (200-to-400 kPa) maintained in the distribution system at all times?	🗌 Yes 🔲 No	□ N/A
Does the system have a watermain replacement or renewal strategy?	🗌 Yes 🔲 No	□ N/A
Are a set of standards available for <u>new</u> construction?; reference to Manitoba Water Services Board (MWSB) or	🗌 Yes 🗌 No	🗌 N/A
City of Winnipeg standard construction specifications or similar, to ensure proper materials and construction procedures are followed?		
Have minimum design and construction standards been established for <u>new</u> service connections?	🗌 Yes 🔲 No	🗌 N/A
Is all <u>new</u> construction inspected to meet these requirements?	🗌 Yes 🔲 No	🗌 N/A
Are all <u>new</u> watermains, service lines, and related equipment CSA or NSF certified for use in potable water systems?	🗌 Yes 🗌 No	□ N/A
Are all <u>new</u> watermains and water lines disinfected as per AWWA, MWSB, or City of Winnipeg disinfection standards including	🗌 Yes 🗌 No	🗌 N/A
confirmatory bacterial testing before placed into service?		
If piped sewer is present, is there at least 3 m (10 feet) horizontal distance separation between watermains and sewer mains, where they run parallel?	Yes No	□ N/A
If watermains are closer than 3 m (10 feet) from sewer mains are the watermains vertically above the sewer mains?	🗌 Yes 🗌 No	□ N/A
If yes, do the watermains have a vertical distance separation at least 0.45 m (18 inches)?	🗌 Yes 🗌 No	□ N/A
If watermains cross: sewer mains, raw or other non-potable water lines, oil or gas pipelines, etc is the watermain above at least 0.45 m (18 inches)?	🗌 Yes 🗌 No	□ N/A
Are watermains protected from damage by being buried with at least 2.4 m (8 feet) cover for year-round systems or 0.45 m (18 inches) for seasonal?	🗌 Yes 🗌 No	□ N/A
Has the distribution system had any issues with frozen service lines?	🗌 Yes 🔲 No	🗌 N/A
Are "bleeder" lines or valves used to prevent frozen service lines? (These are used in some northern communities.)	YesNo	N/A

Section 22: SW System - Distribution System (not intended for a building plumbing system)

Section is Not Applicable to this System.			
Are water service connections metered?		🗌 Yes 🔲 No	🗌 N/A
		🗌 some conne	ctions
Are water losses kept under 15% to reduce water production	requirements?	🗌 Yes 🔲 No	🗌 N/A
		🗌 dor	n't know
What is the estimated % of water loss for this water system?	%	dor	n't know
Are dead ends supplied with hydrants or flush-outs?		🗌 Yes 🔲 No	🗌 N/A
Are valves and hydrants regularly inspected and exercised?		🗌 Yes 🔲 No	🗌 N/A
Are there adequate number of valves, hydrants, and flush-out isolate and flush the system? Drain the system if seasonal.	ts to	🗌 Yes 🗌 No	□ N/A
Are watermains and distribution lines flushed at least annually	?	🗌 Yes 🔲 No	🗌 N/A
Flushing frequency:			
Are there any known lead service lines present in the system'	?	🗌 Yes 🗌 No	N/A
		🗌 don't know	
If found, has a strategy been developed to remove lead service	ce lines?	🗌 Yes 🔲 No	🗌 N/A
Is there a cross connection and backflow prevention program	?	🗌 Yes 🔲 No	N/A
Are connections where there is potential for backflow of hazar protected by backflow prevention assembly or air gap? (i.e. po		🗌 Yes 🗌 No	🗌 N/A
include agricultural operations, wastewater treatment plants, e			
Are connections from heat exchangers prohibited from being the water supply? (i.e. prohibited from returning water to the p		🗌 Yes 🗌 No	□ N/A
Is there equipment within the distribution system with a high w	vater table	🗌 Yes 🗌 No	N/A
or potential to be flooded? Includes: manholes with potable water equipment, undergrout	nd meter/ valve pits	6	
Are all manholes with potable water equipment or undergrour or similar installations, watertight and free from non-potable w		🗌 Yes 🗌 No	🗌 N/A
Are air relief valves within the distribution system located above	veground?	🗌 Yes 🗌 No	🗌 N/A

Section 22: SW System - Distribution System (not intended for a building plumbing system)

□ Section is No	ot App	blicable to this System.			
Are there periodic changes in treated water quality in the distribution system? \Box Yes \Box No \Box					□ N/A
Do the distribution system <u>bacterial</u> records suggest it is well operated and well maintained?				🗌 Yes 🔲 No	□ N/A
Do the distribution well operated and		m <u>chlorine residual</u> records sugges naintained?	st it is	🗌 Yes 🔲 No	□ N/A
Do the records su	ggest	any specific water quality issues?		🗌 Yes 🗌 No	🗌 N/A
If yes, please exp	lain:				
What is the avera	ge age	e (years) of the distribution system?	,		
Distribution					
What is the gener	al con	dition of the distribution system?	Good		
			🗌 Fair - nearing e	end of useful life	
			Poor - replacer	ment required	
Additional comme	ents:				

Section 23: SW System - Bulk Fill/ Truck Fill/ Pail Fill

 \Box Section is Not Applicable to this System.

Does the bulk/ tru	ck/ pa	il fill have appropriate backfl	ow prevention?		🗌 Yes 🗌 No	□ N/A
If yes, what type c	of back	<pre>kflow prevention is used? Ch</pre>	neck all that apply.	0 ⁻	ther:	
backflow preve	ention	assembly: double check val	ve plus siphon break			
backflow preve						
🗌 hose bib vacu	um bre	eaker (only allowed on pail fi	II)			
🗌 air gap						
		with appropriate signage ind rs are allowed to be filled?	icating that only		Yes No	□ N/A
Is access to the fil	II statio	on limited? (i.e. locked, FOB	electronic key, card sw	vipe)	🗌 Yes 🔲 No	🗌 N/A
Is there a flow me	ter that	at monitors water usage (vol	umes) at the fill station	?	🗌 Yes 🔲 No	🗌 N/A
Is there a separate	e or de	edicated pump for the fill sta	tion?		🗌 Yes 🗌 No	🗌 N/A
					🗌 No - combo j	pump
Is the hose length such that it is off the ground at least 1 m (3 feet)?					🗌 Yes 🔲 No	🗌 N/A
What is the average	ge age	e (years) of the fill station eq	uipment?			
Fill Station						
What is the gener	al con	dition of the fill station?	🗌 Good			
			🗌 Fair - nea	ring ei	nd of useful life	
			🗌 Poor - rep	lacem	ent required	
Additional comme	ents:					

Section 24: SW System - Operation and Maintenance (O&M)

Is the water system checked on a daily basis when it is operating?	🗌 Yes	🗌 No	□ N/A
How many hours per day does the water treatment system run?			
How many hours per day does the pump/s run?			
How many hours per day does the operator spend on the water system?			
now many hours per day does the operator spend on the water system.			
Is there a back-up operator for the water system?	🗌 Yes	🗌 No	N/A
Has the water treatment facility and/or water distribution system been classified	Yes	🗌 No	□ N/A
under the operator certification program?			
water treatment facility: small system 1 2 3 4			
water distribution system: small system 1 2 3 4			
Have any operators been classified under the operator certification program?	🗌 Yes	🗌 No	🗌 N/A
Is there an up-to-date emergency contact list?	🗌 Yes	🗌 No	□ N/A
Is there a list of critical water users (i.e. hospitals, personal care homes, schools) to be contacted during an emergency?	🗌 Yes	🗌 No	□ N/A
Is there a procedure for emergency notification of water users if a	🗌 Yes	🗌 No	□ N/A
water quality issue occurs or there is an advisory?			
Is there a plan for obtaining water on an emergency basis?	🗌 Yes	🗌 No	🗌 N/A
If the system is operated on a seasonal basis, are Office of Drinking Water procedures followed for start-up and shut-down of the water system?	🗌 Yes	🗌 No	□ N/A
Have written procedures been developed for key activities such as: backwashing filters, watermain repairs, etc?	🗌 Yes	🗌 No	□ N/A
Is there an up-to-date process schematic or water system drawing available?	🗌 Yes	🗌 No	🗌 N/A
Is there an up-to-date O&M manual available with equipment specifications, product sheets, supplier information, O&M instructions, troubleshooting?	🗌 Yes	🗌 No	□ N/A
Has the operator received training from the equipment supplier on O&M of critical water system components such as treatment equipment, controls, etc?	🗌 Yes	🗌 No	□ N/A
Is there a maintenance log for recording preventive maintenance, repairs, etc?	🗌 Yes	🗌 No	🗌 N/A
Are water system records kept for a minimum of 2 years?	🗌 Yes	🗌 No	🗌 N/A
Are instruments regularly calibrated, in particular, water testing equipment to ensure reliable test results?	🗌 Yes	🗌 No	□ N/A
Are extra bacterial sample bottles kept on-hand for emergency purposes?	🗌 Yes	🗌 No	🗌 N/A
Is the system in compliance with the sampling parameters and frequency listed in the Operating Licence?	🗌 Yes	🗌 No	□ N/A
