BEACH CONDITIONS TO SEPTEMBER 8

Water quality testing by Manitoba Environment, Climate and Parks has shown that levels of *Escherichia coli* (*E. coli*) were within recreational water quality objectives at all beaches monitored this week.

Information on beach water quality results, advisory signs posted at beaches, swimmer's itch advisories, swimmer and water safety, and how to report an algal bloom is available at: [manitoba.ca/beaches](https://www.manitoba.ca/beaches).

Please note this is the final weekly beach conditions report for 2022.
