Attention: Mr. Rick Lemoine, P.Geol.

Dear Sir;

RE: PAH CONTAMINATED WATER DISPOSAL  
CENTRA GAS SOIL & WATER REMEDIATION PROJECT  
SUTHERLAND AVENUE OPERATIONS BUILDING  
WINNIPEG, MANITOBA

On August 12, 1996, AGRA Earth & Environmental Limited (AEE) visited the Mid Canada Soil Treatment Facility in Sanford, Manitoba to observe the methods utilized to dispose of the PAH impacted water being stored at the site and to verify that the disposal was being undertaken in accordance with the Remedial Action Plan submitted by AEE to Manitoba Environment.

On August 12, 1996, Mid Canada disposed of all of the water contained within the tanker truck stored on the site. It is estimated that the tanker truck had contained about 3000 gallons of water (13,600 litres). The water was evenly distributed throughout the soil stockpile which measured about 20 m by 40 m in plan dimensions. Given the warm dry weather prior to the water application, the water was readily absorbed into the soil.

It is anticipated that the soil will be disced in the near future, after which the remainder of the water being stored on site will be disposed of.

If you have any questions, please do not hesitate to contact this office.

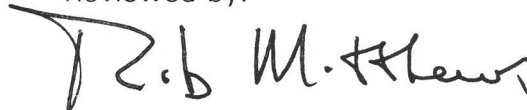

Yours truly,

AGRA Earth & Environmental Limited
