Subject: 35 Sutherland Field Activity Update

Sutherland Public
Notice 20020...

Here's a brief update on Manitoba Hydro's field activities at 35 Sutherland. On our behalf, UMA and Paddock Drilling plan to do some additional drilling between April 2nd and the 4th in areas adjacent, and west of the 35 Sutherland property.

Bob Gill summarizes the activities as follows:

"During the period April 2 - 4, 2002, four test holes will be drilled in Dr. Shaver Park to determine if any coal materials from past operations remain in the underlying soils. This location was one of the former coal storage areas. An information notice about the drilling in the park will be delivered to the nearby residents this week. A copy of the notice is attached. Also during this time period, two test holes will be drilled adjacent to the east-side of the Disraeli overpass, across from the Centra Gas Main Operations Building."

Future phases of the project will also include installing 6 sets of nested piezometers between Rover Avenue and the Red River (likely in middle to late April). In addition, several additional boreholes will be placed along nnabella and Gladstone Streets to ensure comprehensive contaminant plume delineation (middle May to middle June).

The public notice in pdf format is attached for your information.
