INTRODUCTION

Sinclair Unit No. 10 was approved on August 1, 2013 with Tundra Oil and Gas (Tundra) as Operator. The Unit area contains 41 producing wells in 48 LSDs in Township 8 Range 29 W1 as shown in the figure below.

Figure 1: Sinclair Unit No. 10 Area Outline

In accordance with Section 73 of the Manitoba Drilling and Production Regulation, Tundra hereby submits the following 2015 Annual Progress Report for Sinclair Unit No. 10.

DISCUSSION

Production History

For the wells included in Sinclair Unit No. 10, production started in February 2003 with the 02/03-07-008-29W1 well. Average oil production peaked at 5.4 m³/d per well in July 2006. This production was coming from 27 wells and totaled 145.9 m³/d for the whole Unit. In December 2015, the Unit was producing 44.20 m³/d of oil and 22.69 m³/d of

water and had an average WOR of 0.46 m³/m³ in 2015. Water injection commenced in Sinclair Unit No. 10 in October 2014. The rates and WOR are presented in Figure 2.

Figure 2: Sinclair Unit No. 10 Production/Injection Rates and WOR vs Time

Figure 3 shows the cumulative production for Sinclair Unit No. 10 to the end of December 2015 as 245.9 e³m³ of oil, and 112.6 e³m³ of water, representing a 10.1% recovery factor of the OOIP.

Figure 3: Sinclair Unit No. 10 Cumulative Oil, Water and Water Injected vs Time

Waterflood Development Plan

Sinclair Unit No. 10 Waterflood (WF) Development Plan

Sinclair Unit No. 10 is still in the development phase at the end of 2015. In 2013, the 10 proposed horizontal injectors were drilled. In 2014, the 02/05-06, 02/12-06 and 02/05-07-008-29W1 wells were converted to water injection. In 2015, the 00/04-06 and 02/13-06-008-29W1 wells were converted to water injection. All of the horizontal wells are fracture stimulated to improve the injection rates. In order to maximize recovery from this Unit, Tundra expects to produce all of the injectors for a short period of time to clean-up the reservoir near the wellbores prior to being converted into water injectors.

Production performance by injector pattern are summarized in Appendix A.

Any future revisions to the waterflood development or surveillance plan would be based on new production or performance response data, technical studies, or observed reservoir behavior and reserves recovery interpretations.

Waterflood EOR Operating Strategy and Performance

Water Source and Quality

The injection water for Sinclair Unit No. 10 will be sourced from the 16-32-007-29W1 well (Lodgepole formation). The water is treated at the 03-04-008-29W1 battery where it is filtered to 0.5 microns and has scale inhibitor added. The injection water is then distributed to the injectors through the dedicated infrastructure system.

Injection Wellhead Pressures

Injection started in this Unit in October 2014. The monthly wellhead injection pressure for each injector is summarized in Appendix C. Since injection in this Unit is still in the early stages, the injectors are still building up to a target injection pressure of 6300 kPaa.

Reservoir Pressure

Where practical, Tundra is committed to collecting pressure data from newly drilled injection wells. For Sinclair Unit No. 10, pressure data taken in 2013 from 7 locations is available. A summary table is presented in Appendix B. Pressures are corrected to a common datum of -450 m SS for comparison with other units in the area.

Well Servicing

The following table summarizes the well servicing performed within Sinclair Unit No. 10 during 2015:

Table 1: Sinclair Unit No. 10 Well Servicing

100.09-06-008-29W1.00	Pump Change	1/29/2015
100.04-06-008-29W1.00	WIW Conversion	2/7/2015
100.13-18-008-29W1.00	Pump Change	2/27/2015
100.13-18-008-29W1.00	PP Drill-out	7/20/2015
100.16-18-008-29W1.00	Pump Change	8/10/2015
100.13-07-008-29W1.00	Pump Change	8/25/2015
100.07-07-008-29W1.00	Pump Change	8/26/2015

Waterflood Performance Discussion

At the end of 2015, the waterflood area had 5 of the proposed horizontal injection wells on injection and 5 wells still on production. Tundra anticipates converting 3 more locations to injectors in 2016. Conversion of the remaining horizontal wells to water injection wells is expected to take place in 2017.

Plots of the production and injection data along with the VRR information is presented in Appendix D for each of the injection patterns.
